

Anti-money laundering and counter-terrorist financing measures

# People's Republic of China

MaEaa Roll

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CTF) standard.

For more information about the FATF, please visit the website:

This document and/or any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

1. This report provides a summary of the antimoney laundering/combating the financing of terrorism (AML/CFT) measures in place in China (China)<sup>3</sup> as at the date of the onsite visit (July 927, 2018). It analyses the level of compliance with the Financial Action Task Force (FATF) 4R9ecommendations and the

how the system could be strengthened.

......

- a) China has undertaken a number of initiatives since 2002 that have contributed positively to its understanding of ML/TF risk, although some important gaps remain. Its framework for domestic AML/CFT copperation and coordination is well established.
- b) -centralised FIU arrangement consisting of CAMLMAC, AMLB and 36 PBC provincial branches hashigh potential to produce financial intelligence that supports the operational needs of competent authorities but its current functioning results in incomplete access by all parts of the FIU to all data, a fragmented analysis and disseminations, and limitse development of a holistic view. Therefore, major improvements are needed.
- c) LEAs have access to and use a wide range of financial intelligence throughout the lifetime of an investigation, but financial intelligence is not driving ML investigations. When using financial intelligence, LEAs identify predicate criminal behaviours and actively investigate these. Predicate crime investigation outcomes reflect that China has capable LEAs that are skilled in the investigation of complex financial crime and associated predicate crime. Effective, proportionate, and dissuasive sanctions are available and are applied for ML.
- d) China has an institutional framework in place to investigate and prosecute TF activities, in line with its understanding of TF risks and in line with its strategy to prevent TF and disrupt TF channels. Since the implementation

,,

The following territories were not included as part of this assessment: Hong Kong Special Administrative Region (Hong Kong, China), Macau Special Administrative Region (Macau China) and Chinese Taipei.

- of a new counterterrorism law in 2015 and related interpretations, the number of TF prosecutions and convictions haincreased.
- e) The implementation of TF and PF targeted financial sanctions is negatively affected by three fundamental deficiencies, related t(i) scope of coverage of the requirements and a lack of a prohibition covering all persons and entities; (ii) the types of assets and funds of designated entities that can in practice be frozen, and the type of transactions that can be prohibited (iii) a lack of implementation without delay for non-domestic designations. That said, the CTL and relevant PBC Noticære a goodstarting point for future updates to the legal system in line with revised FATF standards, and to improve effective implementation. While not covered by the FATF standards, authorities have taken measures in relation to other aspects of UNSCRs related to PRK.
- f) While FIs have a satisfactory understanding of their AML/CFT obligations, they have not developed a sufficient understanding of risks. Measures implemented to mitigate risk are generally not commensurate with different risk situations.
- g) T supervisory system is almost exclusively focused on the financial sector, as there are no effective preventive or supervisory measures in respect of the DNFBP sector. The PBC has an inadequate understanding of risks overall. Although their understanding of risk impacting the financial sector is adequate, its understanding of institution
  - rather than that of the authorities.
- h) China handles MLA and extradition requests in accordance withhe procedures and standards for approval stipulated by domestic laws, bilateral treaties and multilateral conventions, but due to a complicated decision-making structure for providing MLA or executing extradition requests, it is often a protracted process. At the same time, China can arrange an expedited procedure for urgent requests or cases. There is an effective cooperation in some areas between China and some of its neighbours, however, there is a lack of data that would establish effective implementation of ML/TF related co-operation.

#### RH

- 2. The main proceeds-generating predicate crimes in China are illegal fundraising, fraud, trafficking in illicit drugs, corruption and bribery, tax crimes, counterfeiting of products, and illegal gambling.
- 3. China faces a serious threat from terrorism. From 2011 to 2016, China registered 75 terrorist incidents that killed 545 people. The main conflict area and focus for the authorities is the northwest province of Xinjiang, from where the "Eastern Turkistan Islamic Movement" (ETIM) operates, but attacks occur

throughout China. Around 60 people each year from China have participated as foreign terrorist fighters in Syria and Iraq<sup>4</sup>.

- 4. With total assets of approximately RME252 trillion, banks dominate financial sector activity in China. Based on nature of their products/services and volume of activity, they are considered to be highly vulnerable to abuse with respect to ML/TF. China has witnessed a rapid increase in the activity of online lending entests, primarily via mobile phone platforms
- 5. The lack of coverage of designated nefinancial businesses and professions (DNFBPs) by the AML/CFT framework is a significant vulnerability. The absence of coverage of domestic politically exposed persons (PEPs) is nother significant vulnerability, which is particularly noteworthy in the context of a country where corruption is a major predicateoffence and state-owned-enterprises play a dominant role in the economy.
- A large amount of illicit proceeds flows out of China annually. As noted in the NRA, between 2014 and 2016, illicit proceeds totaling RMB8 64 billion were repatriated to China from over 90countries. China indicates that illicit proceeds also flow out of the country through underground banking operations. There are several instances in which criminals have fled the country, including suspects in corruption cases. The abuse of legal persons has also been identified assethod of laundering illicit proceeds. Such abuse is facilitated, in part, by ineffeive arrangements in place for registering and retaining beneficial ownership (BO) information.

#### **Diffit**h

- 7. China has a good legal framework with respect to the criminalization of ML and TF, national coordination arrangements, the powers and responsibilities of law enforcement authorities and arrangements for international cooperation. There is scope for strengthening the legal framework with respect to a number of preventive measures and the coverage and supervision of DNFBPs.
- 8. An incomplete understanding of risk impacts negatively on the effectiveness clude the

See for example The Soufan Group Foreign Fitzers Update Final 2015 (www.soufangroup.com/foreignfighters), but also see paragraph 230 of this report for other estimates (up to 300 persons).

implementation of preventive measures by FIs, the supervision of these institutions and the investigation and prosecution of ML. Weaknesses in institutional arrangements and related practices impact negatively on the effectiveness with respect to the use of financial intelligence.

9. There are significant weaknesses in both technical compliance and effectiveness with respect to the transparency of legal persons and legal arrangements and the framework and practices related to targeted financial sanctions.

#### Assessment of Risks, Coordination and Policy Setting (Chapte 21; R.1, R.2, R.33)

10. Overall authorities in China demonstrated a strong understanding of the contents of the NRA which was finalized just prior to the orsite visit. However, given the focus of the NRA and the activity of LEAs, on predicate offences and the lack of attention to how the proceeds of crime are actually laundered, beyond those directly ved to

a large extent, is hampered by such a focus. The assessment of risks of legal entities focuses on existing control measures. The TF assessment contained within the NRA is based mainly on qualitative analysis. The analysis collates information from departments involved in countering terrorism, primarily MSS, MPS and the PBC, identifying sources and channels of terrorist financing, and identifying the TF threats faced by China.

11. China has demonstrated strong coperation and coordination at the political and policy—ordination and cooperation is the AMLJMC established in 2002 and comprising of 23 government departments. The AMLJMC is responsible for guiding the AML/CFT work throughout the country, formulating AML/CFT policies and strategies and coordinating various departments in conducting AML/CFT activities.

Financial Intelligence, Money Laundering and Confiscation (Chapter ©s 68; R.3, R.4, R.29 32)

12. Provincial and local investigative agencies conduct the majority of ML and predicate offence

PBC mirrors this decentralised approach with the following three largely independently functioning components: CAMLMAC and AMLB at the check level and

AML units within each of the 36 PBC provincial branches hile the decentralized FIU in China has the potential to produce financial intelligence that supports the lyse and

spontaneously share accurate and timely financial intelligence presents limitations. The analysis and dissemination by the various FIU components prevents the

analyse and share financial intelligence that is relevant for use by law enforcement. First, the STR reporting requirements only extend to FIs and their level of implementation is insufficient. Second, other sources of information, such as information on cross-border currency declarations and beneficial ownership information, are either limited or non-independence is potentially undermined.

- 13. LEAs at central, provincial, and local levels access and use financial intelligence and other information to identify and trace proceeds, and to support investigations and prosecutions of predicateoffences, but do so for a limited extent for AML purposes. While LEAsecognis focus (when developing evidence and tracing criminal proceeds is on supporting investigations and prosecutions of domestic predicateoffences, as opposed to supporting stand-alone ML and TF investigations more broadly. The use of financial intelligence by LEAs leaded dismantling criminal networks but does not result in an adequate identification of ML operations.
- 14. The Ministry of Public Security (MPS) and subordinate Public Security Bureaus (PSB) have responsibility for ML investigation. The Economic Crime Investigation Department (ECID) is the branch of MPS and PSB who hake lead responsibility for investigating complex financial crime including ML. Within this department, there are skilled and capable investigators who have adequate investigative tools and resources to undertake their function.
- 15. There are three discrete ML offences in China. Persons who are proven to have knowledge of the requirement to launder or conceal proceeds of crime prior to the commission of the predicate crime are routinely prosecuted as predicate offence. Selfaundering is not criminalised. Accomplices and selfaunders are convicted and sentenced in accordance with the predicate crime penalty ased on the principle that serious crimes absorb less serious crimes

### Preventive Measures (Chapter 5IO.4; R.923)

- 19. FIs have a satisfactory understanding of their AML/CFT obligations. They generally have an insufficient understanding of ML/TF risks and apply mitigation measures that arenot commensurate with these risks. Online lending institutions have not developed an understanding of ML/TF risks or AML/CFT obligations.
- 20. Fls apply CDD measures ineffectively, withotable weaknesses in customer identification and verification measuresincluding for BQ and ongoing due diligence. Considering prevailing risks, Fls do not effectively apply measures for PEPs, TFS, and measures related to countries with high risk. Fls are relatively more successful in implementing measures related to record keping, correspondent banking relationships, new technologies, and wire transfers.
- 21. Inconsistent practices of reporting suspicious transactions by FIs raise the

ML/TF risk (FIs are assessed in Chapter 5 as having a low level of understanding of risk). The quality of control measures is verified using about 20 criteria. Internal control information of uneven content and quality is also received from the sector FI regulators on their own observations on the effectiveness of internal controls applied to ML/TF risks. Theonline

of understanding of risk in the DNFBP sector is low, as little work has been done in this sector.

25. The AML/CFT supervisory system in China is heavily oriented to then fancial

seems generally consistent with the overall risk profile of the financial sector, with an emphasis on banking which presents the highest levels of risk. The level of inspections in the banking sector is not commensurate with the level of risk. Sector supervisors are generally supportive but do not play a major role. There are inconsistencies in the approach used by sector supervisors. Low or no levels of supervision apply in the DNFBP sectors, with sector supervisors or SROs not playing an effective role in supervision.

- 26. AML/CFT financial penalties applied by the PBC average about RMB 41 million a year (approx. USD 6 02 million a year) based on 2017 statistics; these and effective, dissuasive, nor proportionate given the size of the banks and other FIs in the financial sector, and the lack of initial responses to remedial measures. No AML/CFT remedial actions or sanctions have been applied to anonline lending institutions or to DNFBPs.
- 27. The PBC has had a moderate impact on FIs compliance and risk management processes. The sector supervisors play a supportive role, but their impact is lower as they are mostly limited to the assessment of risk controls. There is not impact on the online lending sector as specific AML/CFT requirements are not applicable. In the DNFBP sectors, the PBC and sector regulators have had a low to non-existent impact up to the time of the onsite. The overall impact of the PBC and sector regulators have had a low to non-existent impact up to the time of the onsite. The overall impact of the PBC and sector regulators have had a low to non-existent impact up to the time of the onsite.

moderate in the financial sector and low in the DNFBP sector.

#### Transparency of Legal Persons and Arrangements (Chapter 0.5; R.2425)

28. Basic or legal information is collected and publicly available on the internet for all types of legal entities, although the information is not always accurate, and it

seems relatively easy to circumvent the registration rules (for example through straw persons). BO information of legal entities (domestic or foreign) is not (publicly) available in China. Authorities make use of available basic information, CDD information collected by FIs, and law enforcement powers. Each of these sources poses shortcomingsand significant challenges, and the combination of measures at the current stage falls short of an effective system for obtaining accurate, adequate and current BO information in a timely manner. That said, authorities have already initiated plans and measures that may improve effectiveness in the future, including through a BO register at PBC.

29. There is no granular understanding of the ML/TF risks of each type of legal person, and the risk classification that has been produced for the purposes of the NRA focuses on control measures related to technical compliance are TrustLaw provides for the existence of domestic civil trusts. No measures have been taken to mitigate the misuse of domestic trusts, although the current risks of civil trusts are low due to lack of regulation that would foster the use of these arrangements. Foreign legal arrangements (i.e foreign trusts) operate in China, such as the legal or beneficial owner of a Chinese legal company. Authorities have been able to detect foreign trusts that operate in China.

## International Cooperation (Chapter 8 IO.2; R.3640)

- 30. China has a legal and procedural framework for providing and seeking mutual legal assistancewhich it uses in practice (including for extradition). The complicated procedure of ensuring a request is consistent with Chinese legislation, results in a very lengthy process, although this can be expedited in urgent cases. Feedback from -operation was mixed.
- 31. Judicial and law enforcement authorities seek international co-operation and legal assistance in a wide range of cases, mostly related to predicate offences, but very seldom to ML or TF. They use different channels in the efforts to return funds to the country. While China requests detention of terrorists and freezing/confiscation of and other

international cooperation tools.

32. CAMLMACexchanges information with foreign FIUs. In doing this, it sends requests abroad to a much lesser extent than it receives from foreign FIUs, which is not commensurate with the volumes of STRanalysed and work undertaken on

domestic LEAs inquiries. Supervisory authorities cooperate in a wide range of information exchange and other forms of coperation with foreign counterparts.

The prioritised recommended actions for China, based on these findings, are

- a) China should expand the information sources relied upon to formulate its NRA to include broader perspectives of the ML/TF theats, vulnerabilities, and risks it faces, publications on the subject as well as feedback from foreign jurisdictions. This will allow a more balanced understanding of the ML and TF risks faced by China beyond those directly linked to proceeds generating predicate offences
- b) China should review the functioning of its FIU to ensure that all information received, analysed and disseminated by all three FIU components is readily available and accessible both athe central and provincial levels. This review should include the creation of a database to unify ancentralise all components of the current (standalone) databases at central and provincial levels. In addition, to ensure the operational independence of the FIU, China should remove the signature of the president of the PBC provincial branch as a condition for dissemination of information to competent authorities.
- c) Reconsideration of the policy, which focuses on pursuit of those involved in predicate crime
- d) Authorities should create comprehensive legal frameworks for the implementation of TF- and PF-related TFS that includes a geneal prohibition, extends to all assets of designated entities, and is implemented without delay, with regard to designations by the UNSC. In the interinting PBC should update its existing Notice to address delays in freezing. The exiting legal framework for TF and the contemplated law on PF could be instrumental in this regard.
- e) Shortcomings in the AML/CFT legal framework related to the coverage of online lending institutions, DNFBPs, domestic PEPs, TFS, and the criteria for reporting suspicious transactions should be addressed. Corresponding guidance should be provided as needed.
- f) assessments of FIs, to ensure that these reflect actual threats and corresponding vulnerabilities exposing these institutions to risk; (ii) the effectiveness of ongoing due diligence, notably the monitoring of transactions; and (iii) the consolidated supervision of financial groups, to ensure a robust management of ML/TF risks by these groups.
- g) The PBC should introduce an effective system of assessing individual entities' risks and supervising and monitoring DNFBPs (apart from trust

companies and DPMs) for compliance with AML/CFT obligations. In doing so, China should review the strategy and necessity of cathlorating with

h) Authorities should ensure that competent authorities can obtain adequate,

This report summarizes the AML/CFT measures in place as at the date of the onsite visit. It analys

the level of effectiveness of the AML/CFT system and recommends how the system could be stengthened.

This evaluation was based orthe 2012 FATF Recommendation was prepared using the 2013 MethodologyThe evaluation was based on information provided by the country and information obtained by the evaluation team during its onsite visit to the country from July 9 to 27, 2018. The team visited Beijing, Shanghai and Shenzhen during the onsite visit.

The evaluation was conducted by an assessment tealed by staff of the International Monetary Fund (IMF) consisting of:

- x Ian Carrington, Senior Financial Sector Expert, IMF(team leader)
- x Richard Berkhout, Seior Counsel, IMF (legal expert)

B

- x Arz El Murr, Financial Secto Expert, IMF (financial expert)
- x Lia Umans, Policy AnalyştFATF Secretariat (FIU expert)
- x Vladimir Nechaev, Executive Secretary, EA@t(ernational co-operation and law enforcement expert)
- x Craig Hamilton, Detective Inspector, New Zealand Podi/APG (law enforcement expert)
- x Office Portugal (legal expert)
- x Alastair Bland, Consultant(NPO expert)
- x Nicolas Choules Burbidge, Consultant (financial expert)

The report was reviewed by Mr. Richard Walker (Guernsey), Ms. Paola Arena (Italy), Ms. ShereenBillings (United Kingdom), and Ms. Anne Wallwork (United States).

China previously underwenta FATF Mutual Evaluation in 2007, conducted according to the 2004 FATF MethodologyThe mutual evaluation concluded that China was compliant with 8 Recommendations; largely compliant with 11; partially compliant

with 13; and non-compliant with 8. With respect to Core and Key Recommendations, China was rated partially compliant or noncompliant with 9 of the 16 Core and Key Recommendations. China was placed under the enhanced follows process immediately after the adoption of its 2007 Mutual Evaluation Reprt (MER). In light of the progress made, China was placed under regular follows in October 2008 and was removed from this status in 2012. The 2007 MER and follows reports are publicly available atwww.fatf-gafi.org/countries/#China.

- 33. The People's Republic of China (China) was tablished in 1949. The country covers an area of approximately \$\mathbb{S}\$ million square kilometres and comprises 34 provinces, autonomous regions, and municipalities and special administrative regions (SARs). Beijing is China's capital city, and other majoties by population size include Shanghai, Tianjin, Shenzhen, Chengdu, and Guangzhou. China shares land borders, which stretch for 22800 kilometres, with 14 countries. At the end of 2017, China had a population of approximately \$7\$ billion.
- 34. China continues to make progress with its policy of gradual economic opening-up which started in 1978. China implements a socialist market economy. While the state controls much of the economy, private enterprise continues to play an ever-increasing role.
- 35. The NationalPeople's Congress (NPC) is the legislative branch and the highest agencyof state power. It elects all supervisory, executive, judicial, and prosecutorial arms of state and has authority over local people's congresses across the country. The NPC has the **p**wer to enact and amendhe Constitutionand laws. The State Council is the leading body of the executive branch and reports to the NPC. It is led by the premier and has authority over all other executive state agencies. It has the authority to develop administrative legislation and regulations in accordance with the provisions of the Constitution Departmental regulations can be issued by ministries and commissions of the State Council, the PBC, the National Audit Office, and institutions under the State Quncil which perform administrative functions.
- 36. The Supervisory branch is accountable to the People's Congress, and independently exercises supervisory power in accordance with Constitution
- 37. The judicial branch is comprised of the People's Courts and People's Procuratorates, which exercise their powers independently from each other in accordance with the Constitution and are both subject to the supervision of the People's Congress.
- 38. The Constitution of Chinas the highest law in the country. Other aws in hierarchical order are laws, administrative regulations, local regulations, and rules.

National and local administrative regulations are administered by the ministries

under the State Council and local executive agencies respectively.

Overviewof ML/TF Risks

ML/TF Threats

39. The highlighteen final in 12326 at 300 at 100 a

#### CHAPTER 1. ML/TF RISKS AND CONTEX23

other jurisdictions.<sup>4</sup> The NRA indicates that illicit proceeds flow out of the country through underground banking operations and that between 2014 and 2016, illicit proceeds totaling RMB8 64 billion were repatriated to China from over 90 countries.

China indicates that the proceeds recovered during this two period, are estimated to have flownout of China over a period of 20 years. The NRA highlights that there are /Ta indi. dies. ndiiod, oe atndi2ear04 (i)-4.00fle (2)-1100d02 7h

currently undertaking comprehensive actions to clean up the sector. However, the sector is notsubject to ongoingAML/CFT supervisionby the PBCThe NRA highlights that at the end of 2016, transaction volumes of RMBtrillion and loans outstanding of RMB816.2 billion in this sector had grown by 110% and 101% respectively, over the previous year. It also indicates that norbank payment sector has experienced rapid growth with transaction volumes escalating from RMB17.6 trillion to approximately RMB 100 trillion from 2013 to 2016. While mobile payments must be linked to a commercial bank account and, as of endune 2018, channeled through a central clearing house, the norface-to-face feature of mobile payments, as well as the use of bearer prepaid cards represents a notable level of ML/TF vulnerability. Private sector entities have reportedly also been engaged in business with entities from higher risk areas, such as those countries targeted as high risk by FATF or those countries with entities that are subject to UN-based targeted financial sanctions (TFS).

43. China does not have effective arrangements in place for registering and retaining beneficial ownership (BO) information. The lack of coverage of designated non-financial businesses and professions (DNFBPs) the AML/CFT framework is a significant vulnerability, especially considering the sustained growth in the real estate and precious metals sector and opportunities for legal professionals to exploit weaknesses that can facilitate the abuse of legal persso. The absence of coverage of domestic politically exposed persons (PEPs) is another significant vulnerability, which is particularly noteworthy in the context of a country where corruption is a major predicate offence and state-owned-enterprises play a obminant role in the economy.

#### UndergroundBanking

44. China has a large underground financial sector with broad international connections. It consists of unlicensed operatives who provide financial services including, payments, settlements, remittances and urrency exchange. The NRA indicates that this sector, which is considered to facilitate the movement of significant amount of illicit proceeds, provides a wide range of services, including remittances, overseas cash withdrawals with bank cards, foreign change, and point of service (POS) machine cash though competent authorities believe that underground banks do not have a direct link to the formal financial system, they recognise that underground banks may illegally utilise the settlement network of financial

"

"

institutions (FIs) to conduct activities. The competent authorities consider that the trend for using underground banking in TF is on the rise and both law enforcement agencies (LEAs) and financial sector supervisors are concerned about this development.

45. The NRA indicates that in 2015, LEAs cracked down at least 170 major cases and in 2016, national public security agencies also resolved 380 major cases of underground banking, arrested 800 suspects, and closed 500 locations where the activity took place. It also indicated that in 2017, a total number of 468 major underground banks and ML cases have been resolved with 892 criminal suspects arrested and 1100 operating centres destroyed. Notwithstanding these initiatives, the authorities still consider underground banking to be a thriving activity.

#### **FintechProducts**

- 46. China has witnessed a rapid growth in the use of Fintech products, particularly in the non-bank payment sector (see below section offinancial sector and DNFBPs According to the NRA, therewere approximately 164 billion internet payment transactions conducted in this sector in 2016, representing an almost 100% increase from the previous year. Many institutions that operate in this sector are increasingly offering products that facilitate cross-border transactions. The authorities' concerns about the ML/TF vulnerability of these products relate to the ease with which accounts can be opened and the neface-to-face nature of the delivery channel. While limits are set for individual transactions, the authorities are concerned that criminals could use multiple accounts for ML/TF purposes.
- 47. Since 2017, the PBC has started to work with sector regulators and other government agencies to develop measures to address risk associated with the rapidly developing internet financial activity. Current initiatives are expected to lead to the development of a Fintech regulatory framework including guidance to be issued to the industry.<sup>17</sup>

......

7

## '—•-"→k•Assessment

' — • – "*R* ï • *Alfijh*a

- 48. China completed its first NRA in 2017. It draws primarily upon an analysis of 680 000 published court judgements from 2013 to 2015 to inform itself of threats to the country's economy and social order. The NRA alsoalyses inherent risks and the mitigating controls in place related to financial sector products and the activities of some DNFBPs. The NRA nalyses the various proceeds generating crimes in China both on a national and regional basis. It identifies illegal fundraising, corruption, telecommunications and internet deception fraud, and drug trafficking as the four major proceeds generating crimes accounting for more than 7% of the estimated criminal proceeds generated in China.
- 49. The NRA identifies the ETIM as the main TF threat to Clinia with limited quantitative data and qualitative data (including cases), and information obtained through interviews with counter terrorism departments.

#### Scoping of HigheRiskIssues

- 50. Assessors focused on how cases involving proceeds from the main predicate offences are investigated and prosecuted and proceeds are confiscated. They assessed the use of financial intelligence with respect to both ML and TF cases.
- 51. Considering their dominance of financial sector activity and the nature of their products and services, the team assessed banks' understanding of ML/TF risk, the risk management systems in place, and the challenges, if any, that the strong presence of state-owned banks present for effective supervision.
- 52. Considering the significance of crossborder transfers and the volume of criminal proceeds that flow from China to several international destinations, attention was paid to the activity of the nonbank money or value transfer services sector. Due to the rapid growth of their activities, assessors paid attention to the online lending and payment sectors. The assessorattention also focused on the supervision of the above categories of FIs, as well as the fastowing Fintech sector.
- 53. Due to the deficiencies in the transparency of beneficial ownership of and the documented abuse of legal persons, assessors focused on China's ability to trace funds

and ownership information through corporate structures and, in general, the effectiveness of arrangements in place to prevent abuse of these structures.

- 54. Considering the substantial volume of illicit proceeds flowing out of China and the incidence of suspects fleeing the country, assessors examined the measures in place with respect to international cooperation generally, as well as the effectiveness of border protection and customs agencies.
- The team assessed law enforcement's and prosecution's understanding of the TF risk and TF investigations and prosecutions, including the use **6** mancial intelligence, both domestically and in cooperation with foreign counterparts.

obligations related to TFS.

#### Areas of Lesser Ristand Attention

56. Group financing companies and asset management companies whose activities are focused primarily on managing portfolios of nonperforming loans of domestic FIs have a lower level of ML/TF risk as they are limited with respect to the volume of their transactions and interaction with third parties. The assessment team devoted lesser attention to these areas.

- 57. China's GDP grew by 6% in 2017 with nominal GDP reaching RMB82 1 trillion. The average annual GDP growth rate over the five ear period from 2013 to 2017 was 7.1%, and the unemployed rate has averaged 5.1% over the period. China is transitioning from high-speed to high-quality growth, and the authorities have set a GDP growth target of 6.5% for 2018 Domestic credit to the private sector, which averaged 15% over the 5-year period, fell to 12.8% in 2017?
- 58. China has a large and complex financial sector. 18 main commercial banks (including 5 large commercial banks, 10 jointstock commercial banks and 3 policy/development banks) account for 69% of the total assets the banking sector. Banks dominated financial sector activity with total assets of RMB252 trillion at the end of 2017. China's banking sector has witnessed rapid

<sup>8</sup> IMF, China Article IsV Reprt, p. 59.

<sup>&</sup>lt;sup>9</sup> IMF, China Selected Indicators, China Article IV Report 2018, p. 3.

growth over several years. This trend has moderated over the past year and growth in banking sector assets o8% in 2017 was half the rate of growth for the previous year, and banking sector assets fell as a percentage of GDP for the first time since 2011.10 Assets of insurance and capital market institutions totalled RMB 16 and 13 trillion resp ectively.

Fi lin

> 59. China has a stable political system and wedleveloped institutional infrastructure. The Anti-Money Laundering Joint Ministerial Conference (AMLJMC), comprised of 23 different government departments, has been meeting regulars ince 2002 to direct and coordinate the implementation of the AML/CFT framework, with the State Council approving the outcomes of its work.

別 ħ

> 60. There are strong and mature institutions across the public sector and mechanisms are in place for the national coordination of AML/CFT initiatives. Regulatory objectives and strategies are transmitted through a multiplicity of secondary legal instruments with a degree of duplication in several instances, which has the potentia

size requires a fragmentation of the institutional arrangements which presents coordination challenges, some of which were observed by the assessment team.

61. Corruption is considered to be a significant predicate offence, and the authorities have prioritise d anti-corruption initiatives. There is, however, no strong indication in terms of the operation of government agencies, that corruption has negatively impacted the overall effectiveness of the AML/CFT system.

# AML/CFTStrategy

62. the Opinion on Strengthening the Supervisory Framework and Mechanism for AMoney Laundering, Countering the Financing of Terrorism and Antlax Evasion (Stat Council GAD Letter No. [2017] 84) issued by the General Office of the State Council. The strategy emphasizes the role of the AMLJMC as the national coordination body and the PBC as the leading AML/CFT

<sup>10</sup> IMF, China Article IV Report, p. 8.

authority. Its objectives include strengthening the legI and regulatory framework, the capacity of AML/CFT institutions and cooperation among the agencies. The strategy also seeks to strengthen international cooperation.

## Legal and Institutional Framework

#### Policy Coordination Bodies

- 63. The AMLJMC is the highestML/CFT coordination body in China. It is led by the Governor of the PBC, and its membership includes the main AML/CFT government agencies.
- 64. The  $\ddagger$  ''  $\check{Z} \ddagger \bar{i} \bullet f \bullet \bullet$  '  $\hat{i}$  (PBŠ)  $\dot{i}$  is the central bank and the principle AML/CFT authority in China with responsibility for co-ordinating all national initiatives. It houses the Anti-Money Laundering Bureau (AMLB) and the China Anti-Money Laundering Monitoring and Analysis Centre (CAMLMAC). The PBC, in collaboration with sector supervisors, is the main AML/CFT supervisor FIs.
- 65. The PBC hosts the Financial Intelligence Unit (FIU,) which consists of CAMLMAC, the AMLB and the GPBC branches, each of which executes aspects of the

66. CAMLMAC

and all of the information contained in key STRs directly reported to the 36 PBC branches at provincial level. It undertakes analysis, makes seminations to central LEAs or forwards information to the AMLB or provincial branches for administrative investigations.

67. The AMLBis responsible for supervision, administrative investigations, policy oversight, and the overall coordination of the PBC

70. The SPPsupervises and directs arrests and prosecutions with3 ()-93.995 (and)2.998 (98 -Ft2

- 79. The China Securities Regulatory Commission (CSR®) prudential regulator for securities institutions and supports the PBC on AML/CFT supervision.
- 80. The State Administration for Foreign Exchang SAFF is administratively part of the PBC and is in charge of supervising foreign exchange transactions.
- 81. The Ministry of Justice (MDJ) coordinates mutual legal assistance (MLA) pursuant to relevant treaties and conventions. It is also responsible for licensing and supervising lawyers and notaries.
- 82. The Ministry of Finance (MOF)s responsible for licensing and supervising accounting firms, and certified public accountants. It is also responsible for allocating budget to competent authorities, including to the PBC and its branches.
- 83. The Ministry of Foreign Affairs (MF)Adevelops policies on international cooperation with other governments and leads on the implementation of UNSCRs regional AML/CFT organisations.
- 84. The Ministry of Housing and Urban-Rural Development (MOHURD)s responsible for the supervision of the real estate sector.
- 85. The Shanghai Gold Exchange (SGE) a non-profit self-regulatory body established by the PBC. It supervises largecale gold trading conducted by its members who consist of personsauthorised to trade in gold in China. The members include major gold producers, processors, and retailers, but does not cover the downstream network of 11500 institutional customers.

### Financial Sectorand DNFBPs

#### Financial institutions

- 86. Banks dominate financial sector activity in China. As of December 31, 2017, assets of commercial banks (arge commercial banks, joint stock commercial banks and urban commercial banks) and the assets of rural banks and other desit-taking institutions tot alled RMB252 trillion.
- 87. The activity of foreign branches and majorityowned subsidiaries is significant

owned subsidiaries are owned by the top five banks. As of the end of 201these banks had 1270 overseas branches, accounting for 1.85% of the total number of

"

'

1

branches (68 for 12% of the total assets (RMB92.82 trillion) of the top five banks

88. There are licensed capital market entities in **Gha** with assets totaling RMB13.5

activity. Assets held by insurance entities totaled RMB 16.8trillion.

11					
		2			
		2			

Can only be operated within one county. Total assets account for 13% of the total for the banking sector.

	2		
			II
		=	•

89. Online lending is one of the 7 categories refers to direct lending between individuals through internet platforms (also referred to as "P2Ponline lending"). These platforms provide intermediary services, including information exchange, matching, and credit rating assessment, for investors and financiers, as well as credit loans directly from microlending companies to users. Most

require offline review. Currently, personal loan amounts do not usually exceed RMB 200 000. Corporate loans cannot exceed RMB 1 million. Accumulated loan amounts across allonline lending platforms cannot exceed RMB 1 million for natural persons

P2P credit loans are processed through internet platforms, while P2P collateral loans

## **DNFBPs**

The following DNFBPs operate in China but have not be designated wendthe AML Law:

- : At the end of 2017, there were approximately 130000 Х real estate agencies in China, employing over one million agents. The sector is estimated to generate income in excess of RMB billion annually.
- d its network of Х institutional customers. No data have been provided on the number of persons who trade with SGE members or the number of unorganized/unregulated DPMs outside the SGE framework.
- in China must be part of a law firm. It is estimatedhere were Х 325 500 lawyers in China at the end of 2016 and 2800 law firms.
- At the end of 2016, there were 13175 notaries in China and 3001 Χ notary institutions. Notaries dealt with 13 990 000 cases during 2016.
- At the end of 2016, there were 105200 certified public Х accountants in China and 7408 accounting firms.
- No data have been provided on the number of Х such providers.
- 92. It is illegal to operate casinos in China.
- 93. When assessing the effectiveness of prentive measures and AML/CFT supervision, the assessment team gave the highest importance to banks, followed by payments institutions. The securities and futures, insurance, internet finance, real estate agents, company service providers, and DPM were conterned to be at a medium level of importance. Less importance was given to other DNFBPs sectors.

#### **Prevertive Measures**

94. -out in the AML Lawand a vast number of secondary legal instruments, including regulations, notices, administrative measures, opinions, rules, and guidelines. In the process of conducting the assessment, the team reviewed more than 30 AML/CFT regulations in addition to many other secondary legal instruments relevant to the assessment. This fragmented framework results in several instances of overlap and duplication across the legal

36

"

framework and, in some cases, makes it difficult to understand the source and nature of specific obligations.

## Legal Persons an Arrangements

#### LegalPersons

- 95. There are three types of legal persons in China: (i) special public legal persons; (ii) non-profit; and (iii) for -profit legal persons:
  - i. Special legal persons include state agency legal persons (2000), basic self governing mass organizations (660000), rural collective economic organizations (7700), and urban and rural cooperative economic organizations (2017000). These legal persons are created by state organisations. The latter can undertake commercial activities, and although the ownership of these entities is collective, the control is not. These types of legal persons are for the most part not covered in this report.
  - ii. Non-profit legal persons include public institutions (970000), social groups (352 000), foundations (6 300), social service organizations (397000), and overseas NGOs (393). These entities are covered under IO.10 (NP.Os)
- iii. For-profit legal persons consist of limited liability companies (LLC, 23 798 000), joint-stock limited companies (JSLC, 140200), state-owned enterprises (357000), listed companies (3 400), and foreign investment enterprises (539 000). These foreign investment enterprises include wholly owned foreign enterprises, Chines foreign equity joint ventures, and Chineseforeign contractual joint ventures. Other forprofit legal persons include enterprises owned by the whole people, enterprises owned collectively, private enterprises, and associated enterprises. In addition to these, there are also legal entities that do not qualify as legal persons under Chinese law, but that are nonethelesselevant for this report. These other for profit quasi-legal persons include other noncorporate persons that do not meet the requirements of legal persons, partnerships (55000), sole proprietorships (2 586 000), enterprises of foreign jurisdictions that are involved in business operations within China, residentand representation offices of foreign enterprises. LLCs and JSLCs are also referred to as on the terms used in the Company Law.

without indicating what these other for-profit legal persons are. This provides legal flexibility as China continues its reforms, but alsoreates some uncertainty as to the types of legal entities that exist.

## LegalArrangements

Χ

- 97. In addition to foreign trusts, which are notrecognised or regulated in China but can undertake business in China (e.g., ownin@hinese companies);the Trust Lawrecognises three types of trust: (i)civil trusts; (ii) charitable trusts; and (iii) business trusts. In the previous FATF/EAG assessment report of China, all of these trusts were considered to meet the definition of legal arrangements under the old R.34; however, under the current standard only civil trusts meet the definition of legal arrangement.
  - There are three types of civil trusts: wealth, educational, and testamentary. Educational civil trusts aim to provide funds for education; testamentary civil trusts aim to ensure that the will of a deceased is executed (as far as the distribution of asset of the deceased is concerned); and wealth civil trusts allow a person's wealth to be managed by another person. Unlike business trusts and charitable trusts, civil trusts are not regulated by the CBIRC and the only legal provisions governing civil trusts re those found in the Trust Act. While the legal framework explicitly requires business and charitable trusts to be managed by trust companies poprofessional trustes are required for civil trusts. As was indicated in the previous assessment report, it remains possible for civil trusts to be established and administered outside the regulated sector. According to authorities and (academic) literature, civil trusts are said to be rarely used in China, which is in line with the observations of the assessment team.
  - The assessment team considers that business trusts despite their name do not meet the FATF definition of legal arrangements, but that these are financial investment products offered by trust companies that are financial institutions (as covered under IO.3/IO.4 in this report)<sup>35</sup>

......

.

100. China does not have one central authority dealing with MLA requests. It has established a mult-channel method of carrying out international cooperation. Government agencies which are involved in this process include the MOJ, the MPS, the MFA, and the SPP.

The function has been transferred from the SPP to the NSC.

## 脚路

## **Key Findings**

- a) Since 2002, China hastemonstrated an ongoing practice of developing AML/CFT policies and risk mitigation activities based on risk assessments, as evidenced by the number of threat, vulnerability, and risk studies conducted in China since that time, and the subsequent issuance opinions, measures, regulations, and laws resulting from such studies. With the publication of its first NRA in June 2018, China has formalized the process for identifying and assessing its ML and TF risks.
- b) coordination is well established. The AMLJMC, comprised of 23 different government
  - importance the authorities attach to AML/CFT. The PBC is the lead department responsible for formulating and updating the AML/CFT strategy which is published by the State Council and to which implicated departments are held accountable through the national audit process.
- c) While China demonstrated that it has a good understanding of ML/TF risks and that its understanding of risk was not based solely on the NRA but rather on its long history and practice of undertaking threat, vulnerability and risk assessments, its understanding has gaps. tallole among them are DNFBPs (expanded upon further in the following Key Finding) and legal
  - risks is hampered, to some extent, by an overreliance on known threats derived from the analysis of predicate offences thereby missing information on the methods and trends of ML activity that would only be derived from ML crimes that were not prosecuted.
- d) While there is a reasonably good understanding of risks at the sectoral level for DNFBPs, there is a lack of risk assessments of individual DNFBPs due to the absence of supervisory arrangements. China is aware that the lack of guidance for DNFBPs represents a vulnerability along with the failure of understanding of
  - ML/TF risks faced by DNFBPs would be significantly enhanced once AML/CFT obligations are fully and properly imposed on all entities in the DNFBP sectors.

## **Recommended Actions**

a) China should expand the information sources relied upon to for**m**ate its NRA to include broader perspectives of the ML/TF threats, vulnerabilities,

publications on the subject as well as feedback from foreign jurisdictions. This will allow a more balanced understanding of the ML and TF risks faced by China beyond those directly linked to proceeds generating predicate offences.

101. The relevant Immediate Outcome considered and assessed in this chapter is IO.1. The Recommendations relevant for the assessment of effectiveness under this section are Rs.1, 2, 33, and 34.

# HIR B d

## ' — • – "Uniderstanding of its ML/TF Risks

- 102. China has demonstrated a pattern of studying threats, vulnerabilities and risks on a variety of subjects related to ML since the inception of AMLJMC in 2002. With the completion and subsequent publication of its first NRA in June 2018, China has formalized the process for identifying and assessing its ML and TF risks. The NRA is a culmination of a two-year effort that involved input from 23 government departments as well as different FIs and DNFBPs.
- 103. While considering a range of credible information sources primarily draws upon an analysis of 680000 published court judgements of predicate offence

economy and social order. The NRA places, however, a focus on predicater of the same and lacks sufficient attention to how the proceeds of crime are actually laundered beyond those directly implicated in the predicate offence. While authorities in China demonstrated a strong understanding of the contents of the NRA and proceeds genera

to be much lower.

104. The NRA alsoanalyses inherent vulnerabilities and the mitigating controls in place related to financial sector products and the activities of some DNFBPs. The ANR

preventive measures, such as the system of laws and regulations, supervision, and the effectiveness and/or weakness of criminal penalties, law enforcement mechanisms

and capablities. For example, in discussing supervision relative to CFT, the NRA

working systems. First, the specific coverage of DNFBPs@mina is not clear. China has not yet specified the AML/CFT obligated DNFBPs, which is mentioned the in laws and regulations. Second, the detailed CFT obligation requirements for DNFBPs have not been issued. At present, there are no detailed requirements specific to DNFBPs on customer identification, due diligence, or transaction reporting. Overall, there is a lack

indicated that these gaps were identified at the beginning of the NRA process in early 2017, at the time of theonsite visit, authorities were unable to demonstrate an understanding of the ML/TF risk faced by most DNFBPs.

105.

threats, as evaluated by an analysis of adjudicated criminal cases ofe**pi**cate offences, thereby missing information on specific methods and trends of ML activity that were not prosecuted

position that their Criminal Lawdoes not allow the prosecution of selfaundering in addition to the prosecution of a predicate offence, and their position that most ML crimes are committed by the predicate offenders themselves. The selfundering activity becomes an aggravating factor in sentencing of the predicate offence. Canin asserts that the investigation and prosecution of ML activity igenerally inseparable from the predicate offence. For example, China identified illegal fundraising as the highest proceeds generating crimeyet ML prosecutions where illegal fundraising identified as the predicate offence offence sents less than 1% of the ML convictions.

106. ETIM as the main TF

addresses some fundraising techniques, mainly seffunding through the sale of personal assets and family support. The TF assessment contained within the NRA is based mainly on qualitative analysis. The analysis collates information from departments involved in countering terrorism, primarily MSS, MPS and the PBC, identifying sources and channels of terrorist financing, and identifying the TF threats

and law enforcement CFT work, and analyses the vulnerabilities. In reference to DNFBPs however, as stated earlier, the NRA notes a lack of coverage of DNFBPs and concludes that there is a lack of relevant regulation and guidance for CFT measures in DNFBPs.

108. While an important step in contains some gaps in its analysis of ML/TF vulnerabilities. One such example was identified in the context of FIs conducting customer due diligence (CDD) measures. channel to inquire about the BO

information of legal persons and legal arrangements. Most banks do not carry out

address company service providers (CSP.s)

- 109. Another example ofgaps in the NRA relates to the assessment methodology: the risk mitigation factors considered are, in some instances (e.g., in the vulnerability assessment of the real estate sector) not the controls specified in the Law rather the NRA considers various sector controls either unrelated to, or only indirectly related to, AML/CFT controls.
- 110. Chinese authorities indicated that the NRA was a confirmation of a pre existing understanding of ML/TF risk formulated over the past several years from the various industry risk assessments conducted and the Annual National Threat Assessment exercise.
- of understanding of risks, supported by the longstanding practice of threat, vulnerability, and risk studies conducted in China, and the subsequent coordinated actions to combat predicate offenses ML and TF.

#### National Policies to Address dentified ML/TF Risks

111. As mentioned earlier, China has demonstrated a pattern of studying threats, vulnerabilities and risks on a variety of subjects related to ML since the inception of AMLJMC in 2002. These studies, as is the case with the NRA, resulted in action plans

often involving the issuance of opinions, measures, regulations and laws to serve as mitigating factors to address the risks identified. Through the oversight of the State Council, and the national audit process, implicated departments are held accountable to delivering on these action plans

112. In 2013, China established the National Leading Group for Couriteg Terrorism (the Leading Group) TheLeading Group plays a leading role in intelligence warning, prevention, emergency response, aftercare, and publicity in every aspect of countering terrorism, including terrorism financing. The Leading Group is servetly State Councilors, which consists of a leading group office and a countering terrorism operations office. The members of the eading Group include fixed members and ad hoc members. The fixed members include the MFA, MPS, MSS, and the PBC, while ad hoc members may include the Ministry of Transport, Ministry of Civil Affairs, Ministry of Health, etc. depending on the discussed/addressed. The eading Group sets policies and drafts action plans, the latest of which was shared with the assessment team but for security reasons are not published publicly. After the establishment of the Leading Group, various provinces, autonomous regions, and cities also established local leading groups accordingly.

## Exemptions, Enhanced aramplifiedMeasures

- 113. China identified bank cards as highrisk products. In response, China points to the Notice of the PBC on Strengthening the Administration of Bank Card Business (PBC Document No. [2014] 5)and the Notice on Further Strengthening the Antiloney Laundering Workof Bank Card Business (PBGAD Document No. [2014] 124)s two examples of enhanced measures put in place to mitigate the risk related to bank cards. These notices strengthened requirements for the identification during the application and usage of bankcards outlined in the AML Lawand the Administrative Measures for Customers Identification and Documentation of Customers Identity Information and Transaction Records by Financial Institutions
- 114. China indicated that FIs are permitted to implement certain simplified measures. Jointly with regulatory authorities, FIs are to evaluate the ML/TF risks of the relevant business products, including the vulnerabilities of adopting any recommended simplified measures. Any simplified measures adopted must be done through reaching a mutual agreement with the regulatory authorities. One such example was in 2016 when, after assessing the risk of various account activity, the

## Objectives and Activities of Competent Authorities

- 115. The prevalence of underground banking has been identified by China as a risk related to ML/TF in that it provides a vehicle for the remittance of illicit income to foreign jurisdictions with ease. In response to this risk (see IO.7) MPS has focused resources and efforts on this criminal behavior with considerable success. Authorities report that in r esponse to these efforts they are seeing a reduction in the prevalence of underground banking.
- 116. CAMLMACprioritises its strategic analysis initiatives to focus on financial transactions associated to predicate crimes, which are identified as higher risk through the NRA and other assessments. These initiatives resulted in various high risk crime related typologies reports disseminated to LEAs to assist them in prioritizing their financial investigations. LEAs advised that these strategic analysis products arevery helpful and assist them in setting priorities for their investigations. It should be noted however as outlined in detail in both IO.6 and IO.7, LEAs use financial intelligence primarily to drive predicate investigations, as opposed to ML investigations. In addition, as identified in the write up IO.6, the majority of criminal investigations using financial intelligence from CAMLMAC originate in requestrom LEAs rather than spontaneous disseminationaby CAMLMAC.

# National Coordination and Cooperation

117.

1

'

.

are limited to the financial activity associated to the proceeds of a specific criminal act as opposed to comprehensive financial investigations related to criminal activity more generally. It is analogous to pursuing the proceeds of a drug transaction as opposed to pursuing the asset of a drug trafficker.

121. While China lacks a comprehensive legal framework to deal with targeted financial sanctions related to proliferation financing (see IO.11), the MFA and the PBC have coordinated on steps to implement UNSCR requirements for the final sector. The MFA is responsible for informing other state entities of the existence of new UNSCRs related to PF. PBC is then responsible for communicating the UNSCRs (based on PBC Notice 187/201) as well as issuing riskwarnings to selected vetted FIsAs far as domestic coordination is concerned, to support implementation by banks, the PBC has provided training and asked selected banks to screen their entire database against the UNSCRs. Furthermore, as detailed in IO.11, the authorities have coordinated to implement measures against PF, suchs in relations to export control measures and the smuggling of banned goods.

## Private ‡ ... - Awareness of Risks

- 122. Many private sector entities were involved in the development of the NRA alongside government entities. Electronic copies of the NRA were sent to government departments and the major financial institutions. Smaller Fls and other regulated entities were provided copies through their local PBC branches. The NRA was also distributed to industry association bodies where it is available to DNFBPs. The distribution method used for the NRA has also been used to distribute the Annual National Threat Assessments with a summary version posted on the PBC website.
- 123. While the NRA was only published in June 2018, as identified earlier, China has produced, and shared numerous threats, vulnerability, and risk studies related to specific topics over the past several years. In addition, CAMLMAC produces strategic analysis products and ML/TF risk reminders to guide FIs in their identification of ML/TF risks and facilitate and increase the quality of STR reporting. In addition to CAMLMAC, local PBC branches will issue guidance and risk warnings as well.

#### **Overall Conclusions**

## **Key Findings**

## Immediate Outcome 6

- a) LEAs have access to and actively use a wide range of financial intelligence throughout the lifetime of an investigation to identify and trace proceeds. However, their focus is mainly on supporting investigations of domestic predicate offences, and to a leser extent on supporting ML and TF investigations and developing ML and TF evidence.
- b) centralised FIU arrangement consisting of CAMLMAC, AMLB and 36 PBC provincial branches has high potential to produce financial intelligence that supports the operational needs of competent authorities but its current functioning results in incomplete access of all parts of the FIU to all data, fragmented analysis and disseminations, and limits the development of a holisticor integrated or comprehensiveview to financial intelligence.
- c) analyse and share financial intelligence that is relevant for use by law enforcement. First, the STR reporting requirements only extend to FIs and their level of implementation is insufficient. Secondother sources of information, such

successfully prosecute ML. Most ML prosecutions involve immediate falgor members and close associates of predicate offenders, which confirms that a limit ed impact on the effectiveness of

ML investigations and prosecutions There have been three occasions where legal persons have been chargewith ML.

- c) Predicate crime investigation outcomes reflect that China has capable LEAs that are skilled in the investigation of complex financial crime and associated predicate crime. Financial intelligence is not routinely driving ML investigations. It ishowever, identifying predicate criminal behaviours which are actively investigated.
- d) Effective, proportionate, and dissuasive sanctions are available and are applied for ML. In addition, there exists a range of alternative measures which can be applied when prosecution for ML is not possible or not appropriate. These include administrative sanctions, administrative forfeitures, and the useof disciplinary procedures which can be imposed by the COP against its membership.

### Immediate Outcome 8

- a) China demonstrates a commitment to deprive criminals of property through the seizure and confiscation of instruments of crime and criminal although the accuracy of statistics collection and analysis to mitter and improve
  - the accuracy of statistics collection and analysis to nmitor and improve performance could be improved and an extension of the nonconviction framework or a broadening of the unexplained wealth provisions could be considered.
- b) The NRA acknowledges that substantial amounts of criminal proceeds flow from China to foreign jurisdictions through underground banks. In recognising this weakness considerable effort has been invested to target and dismantle underground banking networks. This is commendable. Authorities report that they are detecting less suchactivity as a result of their enforcement efforts; however, the activity persists and continues to provide for a mechanism to remit the proceedsof crime to other jurisdictions. Focus of recovery of foreign remitted illicit proceeds that has exited China is a current policy objective which has resulted in the recovery of significant amounts of proceeds of crime.
- c) China borders 14 countries and experiences hundreds of millions of movements of people and goods, therefore challenges are significant. A currency declaration system operates in China and enforcement occurs with focus on people, and to a lesser extent mail and cargo. Resources and equipment are deployed to highrisk border crossing entry and exit points which have a degree of effectiveness, further investment of resource is occurring at other entry and exits points, mail centes and at ports. China acknowledges its border risk and the need to implement processes to

improve the flow of information and intelligence between the border agency, the PBC, and the neighbouring jurisdictions.

#### Recommended Actions

#### Immediate Outcome 6

- a) In addition to the current use of financial intelligence for predicateoffence investigations, LEAsshould also focus on using this intelligence to initiate and conduct ML and TF investigations and tracing related assets, and to develop ML and TF evidence.
- b) China should review the current functioning of its FIU to ensure that all information which is received, analysed and disseminated is readily available and accessible to adonstituent parts of the FIU at both the central and regional levels. This review should include the setp of a database to unify and centralise all components of the curret (stand-alone) databases at central and provincial levels.
- c) To ensure the operational independence of the FIU, China should remove the requirement for the signature of the president of the PBC provincial branch as a condition for dissemination of information to LEAs and other competent authorities. CAMLMAC and the provincial branches should include financial intelligence from counterpart FIUs in their standard practices for analysis and dissemination of information.

#### Immediate Outcome 7

- a) A review of the current legislation and consolidation of the Moffence and the receiving offence into two separate and distinct single articles is necessary.
- b) Authorities should remove the threshold for the criminalisation of ML (Art. 312) and in addition amend
  - similar wording as appropriate under Chinese law and increase the understanding and use of the ML offense by the prosecution and judicy in practice. This would enable the ML offence to be applied against a much wider range of ML behaviours.
- c) The authorities should reconsideration the policy, which focuses on pursuit of those involved in predicate crime to includene that has a broader focus
  - predicate crime, which will identify more persons (natural and legal) undertaking ML activities.
- d) China identifies significant risks with underground banking, and therefore the strategy should extend beyond the current disruption activities to that of a focus on the identification of third-party launderers and predicate offenders who are using the services of underground bankers to launder

15

NRA, p. 221.

chosen this approach. However, the assessment team has serious concerns regarding the implementation of this decentralised approach in China, as set out in detail below.

- x CAMLMAC;
- x The AMLB; and
- x Anti-Money Laundering Units within each of the 36 PBC provincial branches.
- CAMLMAC is established at the central level and has primarily responsibility for the receipt and analysis of largevalue transaction reports (LVTRs) and ordinary suspicious transaction reports (STRs) (i.e., transactions related to criminal activities such as ML, TF, and predicateoffences STRs). CAMLMAC also receives the information contained in all key STRs directly and simultaneously reported to the 36 provincial PBC branches. It thuscentralises the receipt of disclosures filed by reporting entities, as required by c.29.2 (see relevant details in the analysis of R.29 in the TCA). This approach also ensures that CAMLMAC has access to all relevant details of key STRs to complement its ownraelysis of LVTRs and STRs. CAMLMAC reports the results of its analysis to the MPS or other competent authorities at central level, or passes the information on to the AMLB or a PBCovincial branch for an administrative investigation. The Head of the CAMMAC takes the final decision in terms of dissemination to central LEAs or passing a case on for an administrative investigation. CAMLMAC also conducts jointly with the AMLB analysis of complex cases identified and transferred to them by the PBC provincial ranches. As of 30 June2017, CAMLMAC had 103 employees.
- 129. While the AMLB is primarily a policy driven unit, it also has the power to conduct administrative investigations of STRs identified by CAMLMAC. In addition, the AMLB coordinates and steers administrative investigations with cross-regional aspects conducted by PBC provincial branches (MLLaw, Arts. 8, 23 26). The AMLB has the independent power to disseminate the results of its administrative investigations to central or local LEAs and other competent uthorities. As mentioned above, the AMLB and CAMLMAC conduct joint analysis of complex cases. As of June 30, 2017, the FIU division within the AMLB had seven employees.

130.

identified by local regulated institutions and whistle-blower reports. In addition to

<sup>16</sup> Key STRs are defined as follows: (I) transaction is evidently suspected of ML, TF, or any

the analysis/administrative investigation of these types of reports, the provincial branches are also responsible for conducting administrative investigations based on suspicious activit

on to the provincial branches AMLLaw, Arts.8, 23 26). During this process, the 36 branches have limited access to information collected analysed and disseminated by the other FIU components at the central or local levels nor systematic coordination with any of these FIU components. Subsequently, the 36 provincial branches take independent decisions as to whether or not to disseminate the results of their analysis/investigation to local competent authorities. Each of the 36 provincial branches shares information on its disseminations with CAMLMAC to ensure that information on key STRs and related dissemination data are centralised. However, the branches keep process information and informatio collected during the analytical/investigative process, including the information of cases not disseminated, in a stand-alone database, which is not accessible outside the individual PBC branch itself (i.e., not to CAMLMAC, AMLB and other branches). Indition, and equally important, local LEAs work closely together with each of the 36 provincial branches and frequently send requests for information directly to the relevant branch. Upon receipt of such requests, the receiving branch enters them in its std-alone database. CAMLMAC or any of the other branches have no access to information requests directly sent by LEAs to an individual branch and are thus completely unaware of the process and the information itself. CAMLMAC receives relevant information the

its database. As of the end 2017, all 36 provincial branches together employed 90 specialized AML investigators.

131. The dissemination of all cases to LEAs and other comment authorities, both spontaneously and upon request, by each of the 36 PBC provincial branches requires the signature of the president of the branch. While the assessment team has no indication nor evidence that this requirement has led to any undue interference in the dissemination process, these requirements could however limit the independence of the FIU and delay the timely dissemination of analysis results. Moreover, this additional step in the dissemination process could delay disseminations to LEA and

other criminal activity. (ii) The transaction seriously compromises national security or affects social stability. (iii) Any other serious circumstance or emergency.

Use of Financial Intelligence and Other Information

their nature are often urgent and highly suspicious.

Use of Financial Intelligence another Information by the FIU

CAMLMAC receives STRs and LVTRs from all categories of FIs as its main type of financial intelligence, while the PBC branches are the primary recipient of key STRs from Fls. Reporting institutions also simultaneously send the information contained in

other competent authorities, which is of concern taking into account that key STRs by

use of the information to support its analysis of STRs and LVTRs. However, the lack of reporting by the majority of FIs and the absence of reporting by DNFBPs limits analyse and share

accurate and timely financial intelligence. For more information and details on STR reporting and on coverage of DNFBPs, see Chapter 1 and IO.4.

CAMLMAC, the AMLB, and the PBC provincial brareshave access to a wide range of financial, administrative, and law enforcement information, either directly or upon request. The AMLB and PBC provincial branches also have the power to obtain any relevant documents and materials from any reporting entitywhen conducting an administrative investigation. This broader power (which happens to correspond to technical requirements in R.29 (c.29.3)), does not extend to CAMLMAC. CAMLMAC only has the power to request a supplement and/or a correction from any reporting institution when an STR or LVTR is incomplete or erroneous. If CAMLMAC considers that a case file would benefit from additional information from reporting entities, then it has no other option than to transfer the case for an administrative investigation to the AMLB or one of the provincial branches. This approach limits

is relevant for LEAs. This is a concern because CAMLMAC is the only component of ement and the only entity in the country with access to all STRs,

information, see analysis on R.29 (c.29.3(a) and (b)) in the TCA.

CAMLMAC, the AMLB, and the PBC provincial branches have direct access to police databases for passport and other identification details. Each of the FIU components can obtain other police information beyond passport and identification

56

through liaison officers at relevant competent authorities; (iii) information from administrative sources such as, property ownership and social security information; (iv) whistle-blower reports; and (v) information from public databases. LEAs can obtain FIU data upon request. They do not have liaison officers at CAMLMAC, the AMLB, or any of the 36 provincial branches to facilitate this indirect access.

- 140. While LEAs have the power to request information from Customs on incoming and outgoing crossborder transportation of both national and foreign currency, the fact that collection and storage of relevant information by Customs is mainly paper based means that this type of financial intelligence is not readily available for use in
- 141. LEAs, both at central and local level, have the power to obtain financial intelligence from reporting institutions, either directly or via CAMLMAC and the 36 PBC provincial branches. To facilitate the receipt of financial intelligence from reporting institutions, LEAs at the central level, make extensive use of express inquiry and feedback channels directly with FIs, such as the dedicated Electronic Inquiry Platform with more than 60% of the commercial banks connected. Similar arrangements have recently been set up at the local level.
- 142. As set out in R.31 of the TCA, LEAs have the poweruse special investigative techniques when conducting a financial investigation and the authorities presented relevant cases to the assessment team.

## STRs Received an Robequested by Competent Authorities

- 143. Since 2012, CAMLMACAMLBand the PBC provincial banches have worked with FIs to reduce the volume of defensive reporting and improve the quality of STRs and key STRs. These efforts have resulted in a significant decrease in STRs reported to CAMLMAC (from 29.6million in 2012 to 5.44 million in 2016) and an increase in key STRs directly and simultaneously reported to both the relevant provincial branch and CAMLMAC (from 4800 in 2012 to 8504 in 2016).
- 144. The large majority of (key) STR reporting (95%) takes place in electronic format and all relevant data a

the assessment team has no indication that CAMLMAC or the PBC provincial branches face challenges when entering the relevantata in their databases.

- 145. The fact that CAMLMAC directly receives the information contained in a key STRs simultaneously reported to the PBC provincial branches allows CAMLMAC to centralise the receipt of all types of reports (STR, key STR, and LVTR) by Chi arrangement. This is important because each of the 36 PBC provincial branches operate standalone databases, which are not accessible by CAMLMAC, the AMLB or any other branch.
- 146. FIs face challenges in determining whether they should report suspicins in the form of an STR or key STR. Representatives of FIs informed the assessment team that they would only report a key STR to a PBC provincial branch and CAMLMAC when they are able to identify an underlying predicateoffencethrough the results of their detailed and substantiated analysis, which they also referred to as an investigation. Representatives of some institutions explained that in the absence of a predicate offence

They clarified that, in such cases, they would file a report in the form of a whistle-blower report—directly with central or local LEAs but would not simultaneously file an STR or key STR with CAMLMAC and/or a PBC provincial branch. This is a concern because

proceeds of crime (POC) (see write of IO.4 for more details). Moreover, reporting entities are often not in a position to confirm that a suspicion is indeed associated with an underlying predicate offencebecause they have no access to law enforcement information. This means that some reporting entities provide possibly relevant

While this approach ensures that LEAs have access to suspicious activity identified by

to establish linkages with other data in its possession and to produce complete and meaningful financial intelligence that could otherwise assist LEAs in identifying new leads for investigation or support them in their ongoing investigations.

147. In addition to STRs and key STRs, CAMLMAC receives a high number of other reports because of the requirement for FIs to report LVTRs, including largevalue cash transactions, largevalue transfer transactions, and largevalue crossborder transactions, based on a low threshold. For details regarding the threshold for LVTRs, see R.29 in the TCA. The number bt/TRs has been steadily increasing since 2012, reaching 4.94 billion in 2016.

# Operational Needs Supported by FIU Analyzanish Dissemination

148. All LEAs the assessment team met with during the onsite visit, both at the central level and in Shanghai and Shenzhen, informed the team that disseminations by CAMLMAC and the PBC branches are very helpful and often assist them successfully completing predicateoffence investigations. They also mentioned that financial intelligence from the FIU arrangement allowed them to initiate new predicate offenceinvestigations. However, the statistics presented by the authorities do not fully support these oral statements. While these statistics show a 100% success rate of disseminations upon request (because CAMLMAC or the provincial branches is respond to each request received, the number of spontaneous disseminations, especially by CAMLMAC do not result in or contribute to a comparative large number of criminal investigations by LEAs. The following table gives an overview of the number of both spontaneous disseminations and disseminations upon request by CAMLMAC and the 36 PBC provinal branches, and an indication of how many of these disseminations resulted in or contributed to criminal investigations by LEAs.

	_

l

149. In 2016, CAMLMAC disseminated a total number of 4221 cases: 720 spontaneous disseminations and 2701 disseminations in response to a request from LEAs. These 3421 cases contributed to/resulted in 2786 criminal investigations by LEAs: 85 because of spotaneous disseminations and 2701 in response to all of the

spontaneous disseminations only represent 3% of the total number of these criminal s by

LEAs. The authorities did not provide any statistics to show how many of these 286 criminal investigations with financial intelligence from CAMLMAC resulted in prosecutions and convictions because the focus of the statistics is on criminal investigations only. The authorities explained that the investigative process following FIU disseminations is long and feedback up on subsequent prosecutions and convictions is often not available.

150.

disseminations compared to its disseminations upon request is the high threshold that CAMLMAC applies for most of its spontaneous disseminations LEAs, namely when it has a clear indication of a specific predicateffence. This shows to be a challenging approach taken by CAMLMAC, as one of the essential components of

tc

disseminate meaningful financial intelligence to LEAs spontaneously. On the other hand, PBC provincial branches spontaneously disseminate relative higher numbers of files to LEAs compared to CAMLMAC, and this appears to be the direct result of the nature of key STRs, namely that this type of STRs received by the provincial branches often already include an indication of the predicate offence. It does therefore not establish that provincial branches undertake more extensive analysis, or analysis of a higher quality than CAMLMAC

151. In 2016, the 36 PBC provincial branches disseminated together a total number of 3599 to local LEAs: 1980 spontaneous disseminations and 619 disseminations upon request. These 3599 disseminations contributed to 1905 criminal investigations by LEAs: 286 because of spontaneous disseminations (being on average eight cases per PBC provincial branch) and 19 in response to the same number of requests from LEAs (being 45 cases per PBC provincial branch). This means that in 15% of the 1905 criminal investigations LEAs used financial intelligence from spontaneous disseminations while the other 85% were a direct

result of requests for information from LEAs. The authorities did not provide any statistics to show how many of these crimial investigations resulted in subsequent prosecutions and convictions as the focus of the statistics is on criminal investigations only. As mentioned above, the authorities explained that the investigative process following FIU disseminations is long and fedback up on subsequent prosecutions and convictions is therefore often not available.

The authorities presented the team with successful cases, including the following example, which demonstrates a successful dissemination upon request by one of the provincial branches.

This case is an example of the successful conclusion of both a predicate offence and an MLoffence investigation with the active involvement of a PBC local branch. In 2012, the Fuzhou Public Security Agency investigated

During the lifetime of the investigation, the Public Scurity Agency

branch. The provincial branch identified the involvement of 8 banking institutions and 18 of their customers, each with dozens of accounts. The stance clarified the source and destination of the proceeds from the predicateoffence and provided important evidence for solving the case. The Public Security Agency also identified that another person W and other individuals were involved in laundering

defrauding public deposits and V for ML but the authorities did not provide the assessment team with details on the sentences.

When the PBC provincial branches are not in a position to confirm a predicate 153. offence purely based on a key STR, they have the option to open an administrative investigation. During this process, they have access to additional information from reporting entities as well as administrative and law enforcement information (see core issue 6.1 for more details). However, the PBC provincial branches have only

3"

"

data from CAMLMAC. Authorities explained that they take this approach to ensure that dissemination of information, if any, takes pace as quickly as possible after the receipt of the key STR, and requesting information from CAMLMAC would delay the dissemination of financial intelligence. Direct access to the entire CAMLMAC database, including all LVTRs, would therefore address part the concerns set out above (standalone databases at the other provincial branches remain inaccessible) and add value to the financial intelligence package.

154. PBC provincial branches would request CAMLMAC for assistance in more complicated cases, as illustated by the following case example. This case example also illustrates that LEAs use disseminations by CAMLMAC and the PBC branches for successfully investigating and prosecuting predicateoffences, as opposed to ML offences, as set out above.

This example points to the use of financial intelligence for the conclusion of a predicate of fence investigation/prosecution with the active involvement of both CAMLMAC and a PBC local branch. In 2013bank in Tianjin filed

administrative investigation and concluded that the suspicious transactions were likely to involve illegal business activities, such as underground banks. Given the importance and complexity of the case, the provincial branch transferred the initial results of its administrative investigation to CAMLMAC for further analysis and input. CAMLMAC conducted data mining and transation analysis and subsequently disseminated a number of cases to the MPS (number unknown). The public security agencies at the ocal level investigated the case based on suspicions of illegal business operations. Through the investigation, the public sectur agencies identified a large underground banking case, wound up 10 underground banks, and froze 264 bank accounts for total amount of nearly RMB140 billion. The local People's Court sentenced a number of individuals (number unknown) for crimes of evading foreign exchange monitoring and foreign currency purchase defrauding unde Criminal Law Art. 190...

opportunities to identify ML operations through targeted operations against underground bankers. See IO.7 write for more details.

Unless a PBC provincial branch explicitly requests CAMLMAC for assistance, as illustrated by the example above, theresi no systematic interaction between CAMLMAC and the 36 BC provincial branches upon the receipt of a key STR. CAMLMAC is therefore unaware of the action, if any, the branch takes in response to a key STR, unless the branch spontaneously disseminates they ketR and its associated analysis to the local LEAs, and subsequently makes relevant information

branches operates a standalone database, which CAMLMAC or any of thehet 35 provincial branches cannot access, as set out in detail in core issue 6.1 above. Authorities do however not see this fragmented approach as an impediment for effectiveness because CAMLMAC also receives the information contained in each key STR to the provincial branch, and receives information on a subsequent dissemination, if any, by the provincial branches lowever, CAMLMAC does not have access to information collected at a specific PBC provincial branch unless the branch makes these details availale to CAMLMAC following its dissemination. Nor would CAMLMAC be aware that a branch is working on a key STR or responding to a request from LEAs, and what other information the branch has to its disposatimilarly, the branch would not know if any of the other 35 branches or CAMLMAC would be working on cases related to the same subjectnor if CAMLMAC would have any relevant LVTRs in its database

The simultaneous reporting of STRs to CAMLMAC and the information on a subsequent dissemination by the provincial branches indeed present concrete opportunities for CAMLMAC to add value to the financial intelligence chain. In practice, this does not seem to happessystematically for the following reasons. While CAMLMAC receives all information contained in a ke\sqrt{R}TR and includes it in its database for use in future analysis, it does not proactively check its database for linkages with STRs, key STRs or LVTR for doesCAMLMAC give any specific follow up to a dissemination report it receives when a local branch siseminates a case based on key STRs. While one would expect that a dissemination of key STRs by a local branch would trigger the subsequent dissemination by CAMLMAC of any associated STRs, key STRs and LVTRs in its database, this is not the case.

- 158. Similar impediments arise when LEAs send requests for assistance to the PBC provincial branches. While the receiving PBC branch introduces the details of such requests in its own database, this information is not available to CAMLMAC or any other branch for use intheir own analyses because they are simply unaware of the relevant law enforcement information. CAMLMAC receives a copy of all the disseminations upon request for inclusion in its own database but, as with spontaneous disseminations, CAMLMAC does not given specific follow-up to these disseminations. This approach severely limits the analytical processes in place, prevents the development of a holistic view, and ultimately limits the relevance of the mpetent authorities.
- 159. When the provincial branches suspect or identify linkages with other provinces they can refer a case for joint analysis by CAMLMAC and AMLB or request the AMLB to initiate an administrative crossprovincial investigation. From 2014 to 2017, the AMLB initiated 1193 such inter-provincial administrative investigations involving various branches, or nearly 300 administrative investigations per year. However, it is not clear what disseminations, subsequent investigations, and prosecutions and convictions, if any, followed from this, making it impossible to assess the effectiveness. Moreover, in 2017, the AMLB and CAMLMAC performed joint analysis in complicated cases thated to 63 spontaneous disseminations. These 63 disseminations all resulted in subsequent investigations by LEAs and other competent authorities; however, it is unclear how many of these investigations resulted in prosecutions and convictions, which equally prevents the assessment of effectiveness.
- 160. As mentioned above, CAMLMA receives a high number of other reports because of the requirement for FIs to report LVTRs based on a low threshold. The large volume and filing of LVTRs has a high potential to become useful for intelligence operations through operational and strategicanalysis, following larger money trails and identifying wider networks. The authorities provided the assessment team with 13 cases in which the LVTRs reported to ananalysed by CAMLMAC resulted in/contributed to successful criminal investigations by LEAs and subsequent prosecutions and convictions. Eleven of these cases clearly show that CAMLMAC successfully uses LVTR data to support its analysis of STRs and subsequent disseminations, and to respond to requests from LEAs. One case also showed how CAMLMAC nitiated and successfully completed indepth analysis of LVTRs based on information received from foreign counterparts. The two other cases provided

evidence that CAMLMAC conducted datamining of LVTRs and identified involvement in predicate offences and this led to the dissemination of these cases to LEAs and supervisors respectively.

161. Both CAMLMAC and the PBC provincial branches produce strategic analysis. They primarily issue these products to guide FIs in their identification of ML/TF risks and facilitate the (key) STR reporting regime. For example, they published documents to guide FIs in their monitoring and analysis of illegal fundraising and TF activities. They also issued various ML risk reminders on the latest trends in and characteristics of ML/TF activities. These risk reminders thus also assist FIs to increase the quality of STRs and this would ultimately result in higher quality financial intelligence. In addition to the documents produced for reporting entities, both CAMLMAC and the provincial branches issue scalled national and regional ML analysis and research reports to raise awareness of and provide policy guidance to LEAs and other competent authorities on new trends and typologiesC29.4(b) requires strategic analysis to use available and obtainable information, including data that may be provided by other competent authorities, to identify money laundering and terrorist financing related trends and patterns. The limitations presented by the standlone databases at the level of the 36 REprovincial branches and the limited access by

effectiveness of strategic analysis processes. As pointed out in IO.1, the strategic analysis products did, so far, not result in anyignificant changes in terms of ML and TF investigations but provided useful contributions in terms of predicateoffence investigations.

- 162. The statistics provided to the assessment team show that in 2016, CAMLMAC and the PBC provincial branches identified ash spontaneously disseminated 412 instances of TF (176 by CAMLMAC and 236 by provincial branches). During the same year, LEAs initiated 147TF investigations. The authorities were unable to provide a concrete indication of how many of these 147 investigations resulted from the 412 FIU disseminations but clarified that they believe that 2030% (or 29 to 44 cases) were initiated based on FIU information. The origin of the other 70% is unknown.
- 163. The authorities provided several examples of TF investigations and subsequent prosecutions and convictions following spontaneous disseminations and disseminations upon request by both CAMLMAC and the provincial branches. The example below involving CAMLMAC shows that financial intelligence produced by

gement clearly has the potential to offeadded valuefor use in TF investigations.

In 2014, a financial institution reported to CAMLMAC that account presented suspicious transactions. The credit transactions consisted of numerous cash deposits at ATMs in those regions of China where the Eastern Turkestan Islamic Movement (ETIM) operates. Despite the very high fees charged for cashwithdrawals abroad, the debit transactions mainly consisted of cash withdrawals at ATMs in Malaysia and Turkey, but also in other regions of China. In miduly 2014, the account becamedormant. Intelligence from the police showed that Mr. A had left Chinafor Turkey.

the financing methods of the ETIM and CAMLMAC therefore included an indicator in its database that would trigger an alert upon receipt of additional (key) STRs or LVTRs. In June 26, after two years of inactivity,

bank again reported these to CAMLMAC. The STRs immediately triggered

also consisted of international transfers via an underground bank, also under monitoring by CAMLMAC. In addition, CAMLMAC had the beneficiaries of the various transfers on record for suspicion of terrorism financing. On that basis, CAMLMAC disseminated the **eas** the competent LEA. In the course of the subsequent investigation, the police identified another individual Mr. M. who confessed to act on behalf of Mr. A. Mr. M was subsequently charged with the TF offence and sentenced to mother one decade in pison.

## Cooperation and Exchange offormation/Financial Intelligence

164.

arrangement and LEAs have meanisms in place to allow for the sharing of financial intelligence and other information, as described in previous paragraphs.

165.

Electronic Exchange Platforms to facilitate online requests, sistance and feedback on use of financial intelligence. CAMLMAC, the MPS, the Ministry of Industry and Information Technology, and others also jointly established a platform for the

the authorities provided the assessment team with a case example showing how CAMLMAC initiated indepth analysis of LVTRs based on an information request received from one of its foreign counterparts, and subsequently completed with information from a third FIU. Despite this positive outcome, which is very welcomed by assessors, feedback from the global network pointed to weaknesses in the scope of assistance that CAMLMAC is able to provide. Amentioned above with regard to core issue6.1, CAMLMAC does not have the power to request information from any reporting institution. In addition, fundamental deficiencies in availability of BO information in China also have an impact on the exchange of such exchanges and the production of financial intelligence more broadly.

169. In November 2016, CAMLMAC set up a special cooperation mechanism with the Australian FIU AUSTRAC. CAMLMA@daAUSTRAC share financial data on a monthly basis. CAMLMAC screens all key STRs for links with Australia and makes these data available to AUSTRAC. On the other hand, CAMLMAC conducts analysis of STRs it receives from Australia in view of dissemination tbEAs.

Overall Conclusions ommediateOutcome 6

170.

HIM.

ML Identification and Investigation

171. The MPS is the government ministry with resposibility for law enforcement. The MPS has subordinate Public Security Bureaus (PSB) at provincial and municipal levels with sub municipasecuitcome 7 (ML

di

- The General Administration of Customs (GAC) is the border agency which supervises inbound and outbound activities. Within the GAC is the AntSmuggling Department, which can investigate ML associated with customselated crimes. Generally, upon detection of ML activities, matters are referred to ECID.
- Investigators within the newly formed National Supervisory Commission (NSC) (formally the Central Commission for Disciplinary Inspections (CCDI) and the Bureau of Anti-Corruption and Bribery of the SPP) have the mandate to undertake specialized investigation of suspected misconduct by public officials. Suspected ML identified by CCDI is referred to public security bureaus for investigation.
- The SPP has a national responsibility for prosecution of ML and predicate crimes. The SPP exercises authority over psecutions, reviews investigations, determines evidential sufficiency for prosecution, and oversees the activities of the public security agencies, as required. The SPP is an agency that comprises trained legal practitioners, who present prosecutions to the SPC and the subordinate courts. The SPP have an important role in that prosecutions only advance to the courts upon

to the PSBs. Such admistirative agencies routinely refer matters to PSBs. In 2017, the Central Committee CPC and State Council reaffirmed a commitment to fight ML and tax evasion and mandated that agencies should work in close collaboration.

176. The crime of ML is criminalizedunder three discrete articles of theCriminal Law Arts. 191, 312, and 349each having a distinct application. Art191 addresses the behaviour of laundering the proceeds of a specified range **of**fences. Art 312 covers the laundering of proceeds generated from any crime subject to a minimum threshold or particular conditions. Thresholds are established at the discretion of each province within a range of not less than RMB 300 (USD 440) and not exceeding RMB0 000 (approx. USD 467). Current thresholds implemented in each province of China range between RMB3 000 (approx. USD 440) and RMB 0700 (approx. USD 027).<sup>22</sup> Art. 312 also criminalises theoffence of the receipt or receiving of property derived from crime. Art. 349 relates exclusively to the habouring or disguising of pecuniary benefit derived from narcotic crime (which could also be captured under Ass. 191 or 312), but this offence also criminalises the behaviour involved in drug trafficking which extends to the harbouring, transfer, or concealment of narcotics (refer to R.3 of the TCA).

177.

22

.......

money; offence, whereas

ML prosecutions occur with modest frequency. Authorities explained that it is a principle of Chinese law that where the offender (launderer) knew of their intended role to deal with proceeds, (a behavior that would ordinarily be a contravention of an ML offence) prior to the completion of the predicate criminal behaviour, their ; they would

therefore be prosecuted for the predicate crime. Authorities identified that this

in the trial of criminal cases on coverup or concealment of crime related income and proceeds

1) places values thresholds

and other conditions on when this offence can be prosecuted.

Art. 3 of Provisions on Transferring Suspected Criminal Cases by Administrative Authorities obligates administrative authorities to transfer detected crimes to public securities agencies.

Opinion on Strengthening the Supervisory Framework and mechanism for -Moutiney Laundering, Combating the Financing of Terrorism and Arībax Evasion(State Council GAD letter [2017] 84).

strategy also ensured a harsher penalty as the courts impose sentence in accordance with the most serious offence, which is generally the predicate. China confirmed that it would only be appropriate to charge an individual or a legal person with ML if it was proven that their knowledge as to the origins of property they dealt with, was acquired after the predicate criminal act was completed. Public security agencies, and representatives from SPP and the SPC confirmed this approach. This concept is understood, and it confirms that the limited prosecution of ML is due to China having a narrow focus on third-party launderers, who were not actively engaged prior to the

engaged to provide ML services

after the occurrence of the predicate criminal behavior.

# Consistency of ML Investigations and Prosecutions with Threatsk, Rrofile and National AML Policies

178. Authorities have identified that significant proceeds are geneated from highrisk predicate crime types and increasing numbers of predicate convictions for crime
types such as illegal fundraising, tax crime, participation in pyramid selling schemes,
creasing focus

on income generating crime. During 20132016, China identifies that 2.6 million persons were convicted of predicate income generating crime.

179. Given the number of predicate convictions and the geographical size of China, it is difficult for a

who provided ML services, but who were convicted for the predicate crimes. For this reason, statistical data that confirmed the existence of parallel investigations to identify and prosecute third-party launderers is limited to those persons convicted under the three ML articles being Ats. 191, 312, and 349.

## CHAPTER 3. LEGAL SYSTEMS AND OPERATIONAL ISS**73**ES

23

predicate activities in China. Analysis of the Art191 convictions (which targets the most serious ML offending)during the period 2013 2017, identifies that convictions against this article are increasing, but a comparison with the volumes predicate crime highlights ML response using this specific article remains low. China acknowledges that the gradual increase in application of Ar judicial system being relatively conservative and therefore accepts the need to increase the awareness of the application of Art91.

- Illegal fundraising is the single highest income generating crime, reportedly contributing to approximately 39% of all illicit income generated in China. However, corresponding Art. 312 convictions (Ch predicated by this crime type comprise less than 1% of all ML prosecutions. Similarly, national strategic documents such as the NRA identify a current China policyftocus on tax crime. During 2013 2017, there were 19850 convictions for this crime type with comparative ML prosecutions predicated from tax crime being a relatively low 30 Art. 312 convictions.
- Although it is accepted that additional ML behaviors will have been

countries), the high incidence of predicate criminal behaviors all of which generate tens of billions of RMB, confirm considerable ML activity is not being investigated and appropriately prosecuted.

#### 184. Autho

an ML offence remains challenging. SPC issued an interpretation in 2009 to assist Investigators, the Procuratorates, and the Courts

- inferred from objective, factual circumstances. Howevers a result of discussions on the and from a review of statistics, it is clear that this interpretation has had limited impact on the use of the ML Articles.
- The prevalence of underground bankings a concern to Chinese authorities. The NRA identifies that undergound banks (together with crossborder cash smuggling) is a preferred channel to remit illicit proceeds offshore. In 2016, public security agencies investigated 380 underground banking netwiks, arresting over 800 persons involving transactions exceeding RMB 900 billion approx. USD132 billion). Throughout the onsite visit, authorities made numerous reference to the use of underground banking networks to launder criminal proceeds (and assis in the movement to TF funds). However, with limited exception, it was expressed that

3"

,

"

investigation and prosecution of varioustypes of ML activities, including three cases of ML with a foreign predicate offence, third-party ML, and standalone ML have occurred, but in context of risk and predicate crime, convictions occur with insufficient frequency.

- 188. Regarding the prosecution of ML associated with foreign predicateoffences, in 2005, a Chinese citizen was convicted for the laundering of funds that were derived from predicate activities that occurred in Malaysia. This individual was sentenced to imprisonment and fined RMB330 000 (approx. USD48 430). More recently, two additional examples of prosecution associated with a foreign predicate crime have occurred both resulting in successful convicted pursuant to Af312. Most
- crime have occurred both resulting in successful convicted pursuant to A&12. Most of the limited Art. 191 prosecutions emergingout of domestic drug, corruption, and fraud-related crime. The subjects of these prosecutions are often a family members or close associates of the predicate offender.
- 189. The following are examples of ML cases, linked to narcotics, corruption and illegal fundraising.
  - : J assisted his cousin with laundering the proceeds of ephedrine sales. J established companies in false names, he also established two liquor companies and a secondhand car dealership through which the illicit proceeds were laundered to the value of RMB 11.2 million (approx USD 1.64 million). On September 16, 2015, J was convicted of ML, sentenced to 600 000 (approx. USD 88 056).
  - : B engaged the services of his sister, Y, and his brotherlaw, H, to receipt his drug-dealing income through their banking facilities. Y received RMB 10 950 (approx. USD 1 607), and H received RMB 8 000 (approx. USD 1 174) with the knowledge that their bank facilities were being used to disguise the illicit source of B convicted of ML and sentenced to one and affined RMB 2 000 (approx. USD 293), H was senteed to one year

(approx.. USD 146.)

190. A number of other drug-related case reviews identify the use of Art312 to prosecute the concealed possession of criminal proceeds, such as possessing proceeds of crime on behalf of, and for the benefit of, a person involved in predicate criminal activity. In relation to Art. 349, case reviews identified that this article was

: Z received funds from his Uncle L, who was a mayor and Municipal Party Secretary, with the knowledge that the funds were the proceeds of corruption. Upon receipt of the funds he invested them in a property development on behalf of his uncle. On August 18, 2016, Z was convicted in

used to prosecute persons who held narcotics for safekeeping on behalf of another, a

made commendablæfforts in combating this problem. ML prosecutions identified in relation to this crime type largely involved family members and close associates of the predicate offenders. No cases were reviewed that involved corruption and bribery

Corruption is a recognised predicate crime in China, and authorities have

behaviour discrete from ML.

activities that were occurring in foreign jurisdictions.

191.

fined RMB 1.1 million (approx. USD 161 437). Z appealed the conviction

: L received bribery proceeds to the value of RMB 200 800 (approx. USD 29 469) from his brotherin-law who was a senior official in the Agricultural Mac

bank accounts, and he undertook various financial transactions and acquired vehicles on instruction of his brotherin-law. On December 18, 2014, L was convicted for corruption and ML and sentenced to six on this imprisonment and fined RMB 20 000 (approx. USD 2 935).

192. Illegal fundraising is identified by China as a highisk income-generating predicate crime and considerable enforcement activities had occurred to combat this crime type.

: L was the cousin of a subject who without the approval of the National Financial Regulatory Authority raised funds from the general public amounting to RMB 175 million (approx. USD 25.7 million). With knowledge that funds were illegally raised, L permitted the use of personal bank accounts for the purpose of managing the funds. On July 21, 2016, L was convicted of ML and sentenced to two years and three months and fined RMB150 000 (approx. USD 21 936).

: Between 2008 2001, funds were illegally raised from the public promising a high yield of return. The principle offender transferred RMB 100 million (approx. USD 146 million) to Z, his exwife. On August 10, 2017,

Z was sentenced to seven years imprisonment and fined RMB 40 million (approx. USD 5.9 million) for ML

193. A review of 93 ML case examples provided by China demonstrated that there is the capacity to effectively investigate these predicateffences; however, statistics confirm that investigation efforts are not consistently aligned to risk.

## Effectiveness Proportionality and Dissuasiveness of Sanctions

194. In addition to the previously referenced legal issues, authorities identified that the modest number of ML prosecutions reflected their desire to pursue the

investigators and prosecutors identified that standalone ML prosecutions resulted in lower punishments when contrasted with the punishments for predicateoffences. The team, however, considered that the sanctions available are effective, dissuasive, and proportionate, given that MLoffences each have a maximum sentence of up to 10 -related

measures.

195. An analysis of sentences from the case reviews evidenced that most

th On Si

Confiscation of Proceeds nstrumentalities and Property of Equivalent Value as a Policy Objective

- 197. China, through policy, law, and strategy, demonstrates commitment to pursue and confiscate criminal proceeds through both criminal and administrative proceedings. The State Council recently issues appinion on Strengthening the Supervisory Framework and Mechanism for AML/CFT and Araix Evasionthat reinforced the resolve of the country to pursue the recovery of criminal proceeds as a national policy objective.

2"

3

"

,

constituted a domestic ML offence. This was a significant undertaking for China demonstrating effective international cooperation. In 2016 final resolution resulted in the forfeiture of NZD 43 million (approx. USD 29 million), which was shared between New Zealand and Chanpursuant to a sharing agreement

- 199. Operation Foxhunt has led to positive results that the chinese authorities are able to cooperate with foreign authorities to extradite criminals and recover illicit proceeds, which is relevant for this immediate outcome. That said, much of the property recovered as a result of Operation Foxhunt is as a result of persuasion (as it is referred to in Chinese media) and negotiations directly between the fugitive and Chinese authorities, which is outside the scope of the requirements of the standard.
- 200. The criminal procedure lawimplemented on January 12013 established the special confiscation provisions of Art280, allowing confiscation of property without a criminal conviction where the criminal suspect or defendant escapes, hides dies. In January 2017, China released a judicial interpretation on the special confiscation procedure to promote the applicatio

expressly described in law (according to the SPC during the spite), this interpret ation, together with the general sentencing guidelines, in practice provide for equivalent value confiscation.

- 202. Based on a SPC, SPAnd MPS notice, during the course of a criminal investigation, public security agencies can seize or legally preserve propper including real estate, vehicles, and other property of value along with any legal documents and instruments that prove ownership or rights. This process occurs when a criminal investigation is registered as an investigation case or a prosecution has been initiated. Appropriate ministries are advised, such as the MOHURD, who provide support to administer the seizure or preservation authorisation. The authorisation remains in force until resolution of the criminal proceeding.
- 203. In addition to criminal forfeiture, administrative forfeiture is applied for behaviours that do not constitute criminal behaviour in Chinese law. This forfeiture is applied by various administrative authorities such as the SAT or routinely the GAC. Further, administrative agencies when not permitted by a specific law, can (based on the Administrative Coercion La) wapply to the court for enforcement measures which can include freezing and seizure authorities, as sanction for administrate violations.
- 204. Property that is seized is retained by the Public Security Agency or under

circumstances, property can remain in the custody of the owner or close family, subject to certain conditions that protect the value of the property.

# Confiscations of Proceedsom Foreign and Domestic Predicates, and Proceeds Located Abroad

205. The legal processes and the various interpretations evidence policy objectives and provide a sound legal framework for the confiscation of criminal proceeds. Emerging crime threats have resulted in the development of several electronic enquiry platforms to allow public security agencies and the ocurts to directly enquire with banks to freeze funds and suspend the operation of accounts in response to increased occurrence of some crime types such as telecommunicationed ated frauds. Public security agencies are routinely using this platform upon receipt of complaints to recover victim funds and to assist with such investigations. As of March 2018, there were 39.1 million inquiries, resulting in RMB 202 billion (approx. USD29.7 billion) of deposits being frozen, pending investigation.

- 206. Police officers across the public security agencies can initiate seizure and freezing upon the approval of PSB leadersApproximately 18 000 dedicated specialists in various LEAs are engaged in the function of asset tracking and confiscation; and authorities themselves are of the view that prosecution and judicial agencies are all adequately skilled and resourced to initiat and undertake confiscation functions.
- 207. Statistics provided by China confirm that confiscation is being applied routinely to crime types including thoserecognised as high risk. During 203 2017, confiscations valued at RMB 123. billion (USD 18.1 billion) have been identified from publicly available judgements. There are additional judgements which are suppressed and therefore the likely confiscation value would exceed this value. These forfeitures are primarily achieved through three discreet forfeiture processes instruments of crime (property which facilitates offending); direct proceeds of crime; and forfeiture of property which is applied to satisfy fines imposed to reflect equivalent value confiscation.
- Confiscated instuments of crime between 20132017 were valued at RMB288 million (approx. USD42.3 million) from 192 715 cases. It is noted that instrument confiscation associated with ML pursuanto Art. 312 averaged RMB 621 (approx. USD531) per case, ad corruption cases average RMB90 (approx. USD 27.80), reflecting that instrument confiscation values on a per case basis, were negligible.

CHAPTER 3.	LEGAL	SYSTEMS	AND OPE	ERATIONAL	ISS83ES

213. Art. 395 was introduced in response to risk and tocomplement policy objectives in China. Persons (both natural and legal) who are involved in ML and the highsubject to

a similar response, despite risk and the probability that the persons who professionally operate and provide underground banking services in particular are likely to have derived considerable income through fees received in the provision of underground banking services. The investigative challenges presented by underground banking activities also extend to foreign law enforcement when attempting to reconstruct financial events and track illicit income back to predicate crime occurring in China. Assessors discussed with authorities strengthening efforts through expanding the application of At. 395 to underground banking and to reduce its prevalence.

Requests from foreign jurisdictions are enforced at the discretion of the Chinese authorities. Prior to the on-site an agreement of reciprocity was mandatory for China to cooperate with foreign jurisdictions to recover proceeds of crime?

In March 2016, France soght the assistance of Chinese authorities to recover the proceeds of a series of frauds that were contained within a Chinese commercial bank. Chinese authorities immediately froze accounts to a value of EUR 5.8 million. China and France are in current neighbors as to how to return these funds to the victims

On October 26, 2018,  $\S \ddagger f \stackrel{\mathsf{TM}}{} \stackrel{\cdot}{} - \S \ddagger \ddagger \stackrel{\cdot}{} \stackrel{\mathsf{Z}}{} \ddagger \stackrel{\mathsf{T}}{} = \ddagger \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \stackrel{\mathsf{Z}}{} \dots \stackrel{\mathsf{Z}}{} \dots$ Assistanc@ame into force which allowed China to conduct judicial assistance and confiscation with foreign jurisdi ctions without an agreement of reciprocity, and provided China with a more complete domestic legal framework for international cooperation in confiscation.

215. China has developed processes to manage and dispose of property confiscated. In accordance withthe Law of Administrative Penalty(Order of the President No. 76). Property confiscated is sold by public auction with the funds obtained turned over to the central or local treasury in accordance to lawCurrently, 3 290 courts in 32 provinces dispose of confiscated property via online auction. The total value of confiscated property sold via the Ali Judial Auction Platform was RMB 580 billion (approx. USD85 billion), and authorities report that this platform is proving to be a highly efficient disposal mechanism.

# Confiscation of Falsely or Undeclared Crossrder Transaction of Currency/Bearer Negotiated Instrument

216. The movement of cash out of China is considered a main risk by the Chinese authorities, and the flow of illicit proceeds from China has also be edentified as a risk in third -party countries. China has currency control measures which regate the amount of funds an individual can remit from China, but these are currency control restrictions that were not set up for AML/CFT purposes. Athorities identify that bearer-negotiable instruments are not able to be transacted in China and are therefore not subject to any regulation. This is a gap, considering that bearer negotiable instruments (such as checks) exist in China. China Customs website

ng China which allows China to be a transit country for the movement of such financial instruments?<sup>7</sup>

217. In response to the growing use of Chinese debit cards in Hong Konthina (said to be caused by the introduction of ATMs with facial recognition in Maga China), Chinese authorities further restricted the use of domestically issueddebit cards abroad to RMB100 000 (approx. USD 14 675)per individual per year (instead of per account per year), Regulation Hui Fa 2017/29of January 12018). According to the authorities, AML concerns justified taking these restrictive measures. However, these new restrictions were not complemented by specific AML/CFT measures, such as alerting relevant customs units that there would be a higher AML/CFT sisk of

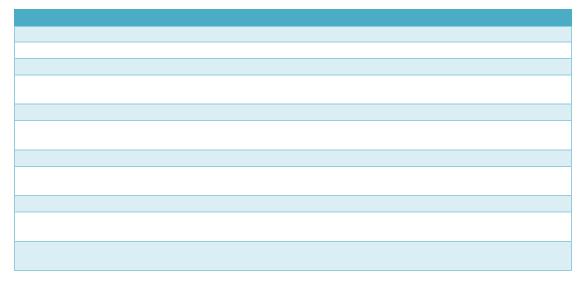

.....

See for example the FATF/APG MERs on Australia, Canada (undertaken by the IMF), and Singapore.

See<u>english.customs.gov.c</u>n Customs Clearance Guide for International Passengers August 2, 2018.

increased flows of crossborder movements of cash between Shenzhen and Hong Kong, China This lack of a focused AML/CFT policy approach regarding cressorder flows of currency, negatively impacts the effectiveness of the system. That said, the authorities have shared a general notice issued around the same time that alerted customs staff of the risk of cash smuggling (ut not specifically of the increased risk of ML/TF).

218. Hundreds of millions of persons enter and exit China annually, for example 43 million person movements occurred entering and exiting Shanghai in 2017. China has implemented controls such as the (xay) inspected of all luggage which in Shanghai has resulted in the detection of 170 cases of persons failing to declare currency in contravention of the declaration regulations. This detection rate is modest given the NRA identifies the crossborder carriage of cash is a riskChinawide, during 2013 to 2016, China Customs detected 2687 cross-border currency cases resulting in the confiscation of RMB510 million (approx. USD74 million). Upon detection, most cases result in an administrative confiscation.

219. Customs has a range of resources and technologies available to detect cross border movement of cash, precious metals, narcotics, and counterfeit products. Given that movements of persons and freight are however large and theorems lengthy, Customs face considerable and significant challenges. Detections and the receipt of declarations are not submitted to the CAMLMAC in a timely manner (currently it occurs six monthly) to enable inclusion of such financial information in the process of

88

- previous legal framework (which was absorbed by the CTL) had not been used since 2012.
- d) FIs seem not fully aware of the risks that IF can pose, and that TF and terrorism risks are not identical, especially in relation to the need to identify assets of designated entities. This is somewhat worrisomeith respect to the larger financial centes.
- e) is significant with nearly 800 000 social organizations registered at various government levels under the MCA. With the passage of  $\S \ddagger \S f$  " (-) f  $^{TM}$  "  $-\S \ddagger \ddagger$ "  $\mathring{Z}$  ih  $\ddot{Z}$  2016, China started the process of applying additional requirements on a subset of the sector that is involved with raising public funds to carry out charitable activity. None of the measures taken thus far howevers based on an understanding of the risk of TF faced by such organizations and no aspect of the oversight mechanish relates to ensuring that such organisations are not abused for the purposes of TF.

‡ '

#### Targeted Financial Sanctions Related to PF (Immediate Outcome 11)

- a) Authorities are in the process of contemplating a law on PF built the absence of a general legal framework that comprehensively covers all aspects of TFS requirements, the PBC has made a positive attempt to impose some measures to comply with some UNSC designations for the FIs.
- b) The implementation of TFS is negatively affected by three fundamental deficiencies, related to(i) scope of coverage of the requirements and a lack of a prohibition covering all persons and entities(ii) the types of assets and funds of designated entities that can in practice be frozen, and the type of transactions that can be prolibited, and (iii) a lack of implementation without delay.
- c) There is a lack of awareness of Iranelated sanctions, with an almost exclusive focus by authorities and private sector on DPRK.
- d) Despite the fact that authorities such as PBC are treating PF in action to DPRK as an important issue the AML/CFT shortcomings in CDD (I@) and supervision (IO.3) are nevertheless largely apply in relation to CDD and supervision in relation to PFshortcomings in this immediate outcome,
- e) While not covered by the FATF stindards, authorities have taken measures in relation to other aspects of UNSCRs related to DPRK that seem to be positive, and that may have a positive impact of the fight against PFin China.

#### Recommended Actions

#### TF Offence (Immediate Outcome 9)

a) China should enhance itsnitigation of TF risk through a detailed analysis of the investigations and prosecutions of TF cases it has already conducted. Such analysis should include a breakdown the methods of TF, such as the collection, movement, and use offunds or assets. In addition, the analysis

- b) In order to improve the detection, prevention, and prosecution of TF crimes China should keep upto-date and detailed statistics relating to Troffences and share this intelligence with LEAs and reporting entities through ongoing training.
- c) To better mitigate the full range of system, China needs to broaden its TF focus and pursue cases of TF elsewhere in the country, particularly in itsfinancial centres.

## Targeted Financial Sanctions Related to TF and rpmofit organizations (Immediate Outcome 10)

- a) Authorities should create a comprehensive legal framework for the implementation of preventive TFS that covers all persons and entities, includes a general prolibition and can cover all assets and transactions. The existing CTL, if broadened in scope, could be a good basis for the implementation of both sets of UNSCRs.
- b) In the interim, PBC should amendNotice 2017/187 and require FIs and DNFBPs to freeze the asse of UNSC designated entities as soon as designated by the UNSCThe MFA should continue to strive towards reducing the amount of time required to circulate UNSCRs (and amendments to lists) to relevant government bodies, such as PBC and CBIRC, to ensure that the entire process from designation by the UNSC would be without delay (i.e., ideally within hours).
- c) Authorities should effectively use preventive TFS in line with the country's risk profile for TF, as foreseen by the existing provisions ithe CTL
- d) Once a framework is in place, authorities should provide outreach to other (regional) competent authorities and the public to sanitize all relevant stakeholders about TFS.
- e) China should determine the nature of threats posed by terrorist entities to NPOs, idetify those organizations within the broader sector that, based on their activities and characteristics, are at risk of TF abuse and conduct outreach specific to the risk of TF abuse.
- f) China should reconsider its position on placing AML/CFT obligations onlal NPOs, identify the subset of NPOs within China that meet the FATF definition of an NPO and focus on raising the awareness of those organizations through outreach in order to protect NPOs from the threat of TF abuse.

#### Targeted Financial Sanctions Related PF (Immediate Outcome 11)

a) Authorities should create a comprehensive legal framework for the implementation of preventive TFS that covers all persons and entities,

includes a general prohibition and can cover all assets and transactions. The contemplated law on PF could be instrumental in this regard.

- b) In the interim, PBC should amendNotice 2017/187 and require FIs and DNFBPs to freeze the assets of UNSC designated entities as soon as designated by the UNSCThe MFA should continue to strive towards reducing the amount of time required to circulate UNSCRs (and amendments to lists) to relevant government bodies, such as PBC and CBIRC, to ensure that the entire process from designation by the UNSC would be without delay (i.e., ideally within hours).
- c) Authorities should broaden their focuson TFSbeyond the DPRK.
- d) Once a comprehensive legal framework is in place, authorities should conduct outreach to other (regional) competent authorities and the public to sensitizeall relevant stakeholders about TFS.
- e) Authorities should monitor the FIs and DNFPBs compliance with these measures and continue to focus on the possible misuse of front companies that facilitate PF TFS breaches.
- 223. The relevant Immediate Outcomes considered and assessed in this chapter are IO.9 11. The recommendations relevant for the assessment of effectiveness under this section are R.58.

## th Oth

224. In the NRA, China identifies the ETIM also known as the TIM, as its major terrorist threat. ETIM operate also(from) abroad and is believed to have carried out terrorist attacks in the Xinjiang province; recruited and trained Chinese citizens outside the country; and smuggled them back into China to perpetrate terrorist acts. In addition to ETIM, the NRA identifies a limited terrorist threat posed by local

extremism.

225.

border to the Middle East to join international terrorist organis. Chinese authorities did provide TF cases relating to foreign terrorist fighters, the TF risk posed by foreign terrorist fighters is not elaborated on. Estimates of the number of Chinese foreign terrorist fighters in Syia differ, one estimate by officials in state media referred for example to 300 such fighters in 2014. Irrespective of the exact

<sup>28</sup> See for exampleGlobalTimes, 15 December 2014/www.globaltimes.cn/content/896765.shtml

number, the issue is a concern for the authority Moreover, this also suggests that attention to the TF risk resulting from foreign terrorist fighters in China is warranted (see also for IO.10).

226. The NRA indicates that the source of terrorist funds is derived from support by personal and corporate sponsors; the sale of personal assets; the receipt of gifts from relatives and friends; from funds generated through business income (such as

A <sup>4;</sup> from religious believers; and, illegal activity such as robbery. The main source of this information is strictly confidential and is only shared among authorities that belong to National Leading Group and AMMC, however, cases presented are in line with the mentioned sources of TF funds. The NRA states that it

disruption of TF and terrorist activity.

but also see paragraphs 3 and 46 of this report for other estimates (around 60 persons per year).

<sup>&</sup>lt;sup>29</sup> A form of alms-giving treated in Islam as a religious obligation or tax.

Such as the requirement to provide pasports when checkingin at a hotel.

Shenzhen advised that this further lowered the low number of TF investigations and prosecutions in their regions. Cases transferred to Xinjiang became inaccessible for the authorities in other regions.

229. China identified the risk of transferring funds overseas for TF activities which includes overseas withdrawal of cash using ATM machines; crobsrder cash transit; and underground banking activities. The following case summaries provided by authorities detail(wal) 45.996 (of) 43.007 mthoriti detail(wal) 45.996 (of) 43.007 T3.16 re f\* 843.04 (i)-

In December 2014, the P&in Xinjiang was notified by an office in another province that a known terrorist from outside of China had transferred RMB 14 000 to YA in December 2013.

The PS in Xinjiang began financial analysis relating to the transfer to YA. They consulted local and ational databases, accessed security intelligence and analysed disclosures from the FIU related to other national security and criminal investigations dating back to 2013, linking YA to 133 of them.

multiple TF-related

#### disclosures.

An investigative task force was established made up of the Counter Terrorism Department, the Economic Crime Investigation Department, the Technical Investigation Department, and the Oyber Security Department. The task force organised the case investigation work across police types, regions, and levels. They used conventional police investigative methods to identify household registration, passport information, and past behaviours of YA and those associated to him both iand outside of China. YA was identified as a sophomore university student.

The local branch of the PBC was engaged to assist in the financial investigation expanding the analysis to over 100 accounts and 1 000 transactions. The analysis revealed a patter of multiple large-value currency-

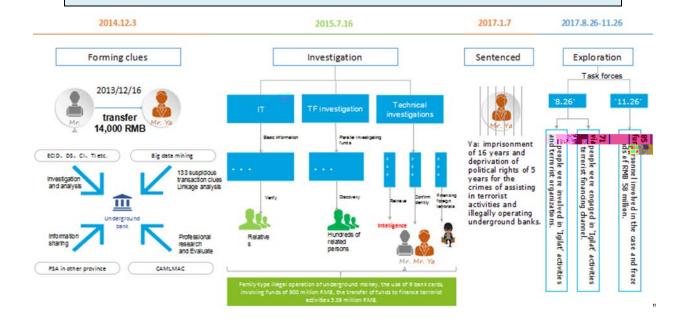

profile as a student. Fundstracking revealed hundreds of parties associated with YA, resulting in the belief that YA was involved in

transferring funds to terrorist organisations through underground banking channels.

The investigation involved monitoring of two mobile phones and six social media accounts belonging to YA revealing a network associated to ETIM and ISIL. Identities of the network were identified and confirmed through electronic surveillance. Transfers of funds, for the purpose of supporting ISIL, to AI, (identified to be an overseas member of a terrorist organition) and SAI a key member of ETIM, were identified.

The investigation revealed thatYA and his relatives operated companies and used them to cover the illegal operation of an underground bank. YA and his brother used nine bank cards to conduct transactions in excess of RMB 900 million, RMB 5.4 million of which was linked to TF activity **fe**ted to travel for the purposes of fighting for a terrorist organisation.

The investigation into YA lead to the formation of other task forces to follow up on the TF transactions identified during the YA investigation. In January 2017, YA was sentenced to 4 years for TF and 3 years for operating an underground bank. In addition, RMB20 million (the balance of the

#### TF Identification and Investigation

230. Identification and investigation of TF is a challenge for the authorities. China set up the National Leading Group for Combating Terrorism, which includes members from the SPC, the SPP, the MFA, the MPS, the MSS, thet MOSAC and the PBC to mitigate terrorism and TF activities. The Economic Crime Investigatio Department

231. MPS maintains a watch list of international and domestic persons and entities related to terrorism and TF. The full list is confidential (also the number of entities on the list) and only disseminated to LEAs and CAMLMAC. A shorter list is shared with FIs on a needto-know basis to assist in STR generation. In 2014, PBC, with participation of CAMLMAC, PBC branches, the public security agency and the security department, developed a monitoring and analysis model and sumbodels for TF

(ECID) and Anti-Terrorism Department are the lead departments responsible for

Authorities indicated that, when necessary, investigations of complex terrorism and TF cases are carried out by forming special investigation task forces consisting of LEAsState Security, the PBC and, in some cases, FIs. When dealing with international terrorism cases, China would copperate and coordinate with international law enforcement and intelligence services. If required, TF investigations may include special investigative echniques such as wiretapping, niternet surveillance, and undercover and special operations.

transactions to assist AML/CFT reporting entities in detecting suspicious

233. The following table provided by authorities represents the number of TF cases and the number of persons implicated in those cases. When the table represents a year-after-year increase in the number of TF cases, given the size of Channel the identified risks of TF, the number of cases is relatively low. In addition, as mentioned earlier TF offences are not broken down by the type of TF activity investigated so it is not possible to determine the extent to which investigations identifythe specific role played by the terrorist financier.

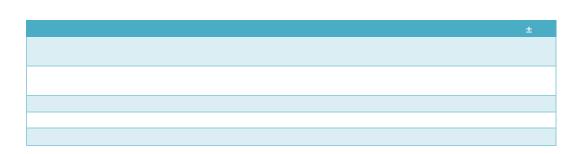

Source AML/CFT Statistics China

investigating TF in China.

transactions related to TF.

The PBC advised that it provides guidance to entities with reporting 234. obligations and promotes regular internal CFT training on TF. In addition, the PBC summarizes updates and gives indicators for monitoring funds

On this basis, FIs further study and develop monitoring models of STRs related to TF, maintelectronic platforms for real-time scanning, that fit their own characteristics or needs. from submitted STRs and disseminate them to LEAsThe PBC routinely cooperate with investigations by participating in case discussions with LEAs and supporting ongoing investigations with analysis.

### TF Investigation Integrated with and Supportive of National Strategies

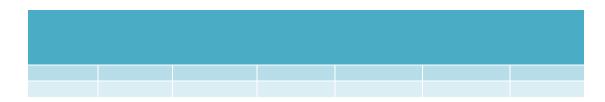

- 235. As mentioned, China has established a national coordination mechanism, The National Leading Group for Combating Terrorism, to coordinate overall planning of CTF strategies. The Office for the National Leading Group for Combating Terrorism was established by the MPS to enhance the coordination and promote effective operation of counter terrorism activity across China through supervision, guidance, monitoring and inspection. The members of the National Leading Group include the SPC, SPP, MFA, MPS, MSS, MCC, and the PBC,
- 236. The National Leading Group for Countering Terrorism is responsible for

work plans for implicated departments. However, because operational plans are of a sensitive nature, involving classified national security issues, no information beyond high-level counter-terrorism strategic goals, and no information specific to CFT activities was shared with the assessment team.

## Effectiveness, Proportionality, and issuasiveness of Sanctions

237. The following table, provided by the authorities, relates to sanctions imposed on natural persons convicted of providing assistance in terrorist activities. Given that such crimes may include administrativetype offences under the Counter Terrorism Law that are outside of the scope of the FATF Standard given that no specific

separate statistics canbe provided (see above regarding the classification of TF related information for state-security reasons) it is not possible to determine that China has effectively imposed proportionate and dissuasive sanctions in TF cases. This negatively impacts the assessment. In addition to statistics, the authorities also provided case examples (which are partially consis e), with references to sanctions between three years and life, and a conviction of a legal entity. In addition, some cases presented indicate that in eight TF cases in 2017, assets were confiscated as an additional sanction (note that confiscation is geneally assessed under IO.8).

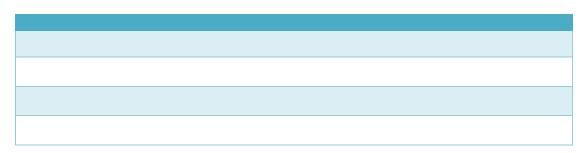

## Alternative MeasuresUsedWhereTF Conviction is Not Possible (e.g., Disruption)

238. If it is not practical to secure a TF conviction, authorities can carry out arrests, prosecutions, and trials in the name of other serious crimes such as accomplices of ring criminals, assisttegroristnotategeencrimationaharbou

> security, or other crimes such as the crime of disrupting order of the financial markets.

239. The following table, provided by the authorities, identifies the number of cases and implicated persons in crimes related to terrorist financing activities.

Source AML/CFT Statistics China.

x No implementation without delay (in relation to UNSCR 1267 and sessor resolutions) Authorities were unable to demonstrate that the freezing actions that the PBC Notice provides for are implemented without delay (i.e., ideally within hours). The initial delays are caused by untimely circulation of new UNSCRs within the government, even before PBC and others could circulate the UNSCRs to supervised entities.

#### UNSCR 1267 and Relevant Successor Resolutions

- 243. Within the scope of PBC Notice 187/2017, the MFA is responsible for ensuring that UNSCRs are implemented in China.is doing so by circulating relevant UNSCRs to relevant competent authorities, but consistent and timely circulation in all cases of UNSCR 1267 and successor resolutions and amendmentsthe lists of designated entities related to these UNSCRs, could note demonstrated. Based on Notice 187/2017, the PBC is then responsible for followingup on the MFA circulars by circulating the information on new UNSCRs to FIs (as a notices); but consistent and timely circulation in all cases could also not be demonstrated.
- 244. During the onsite period, the UNSC amended the list of 126 elated designations <sup>31</sup> which provided an opportunity for competent authorities and FIs to establish, for the purposes of this assessment that new designations and amendments to the lists are indeed circulated without delay. Assessors therefore checked with (regional) competent authorities and with FIs if they were aware of a

......

4"

"

1

very recent change to the list of designations. This was not the se, interviewees were not aware of this recent change to the UN list, or of other recent changes to the UN lists. Assessors could therefore not confirm that UNSCRs (and amendments to designation lists) are indeed circulated and reach FIs without delay. (i., ideally within hours).

245. Fls interviewed made references to commercial compliance software solutions as their main source of information. Indeed, PBC requires the use of commercial compliance software to mitigate the delays in circulation of the UNSCRs This is a positive step, albeit not unique to Chinand FATF has indicated that the use of commercial databases poses challenges The reliance on third-party software may also explain why Fls were not aware of recent amendments to the list by the UNSC. These commercial databases are said to be updated one day after the UN designation/amendment, but this was not verified. The compliance software solutions do not distinguish between UN, EU, SI, or other sanction programs and some Fls suggested that their plemented all these lists in China, regardless of the issuing jurisdiction. Such a suggestion is problematic from domestic legal point of view, although internationally operating Fls may have no choice but try to comply with competing lists from different jurisdictions.

246.

There have been no other submissions to the UNSC since 2009. Possible other targets for preventive designation by the UN could have been Chinese foreign terrorist fighters fighting in Syria/Iraq or other ETIM members. That said, authorities also stressed that in case of the detection of any funds related to ET,IMuthorities would likely priorit ise criminal justice measures. While this does not assist in the implementation of this immediate outcome, it does positively impact IO.9 (see IO.9).

#### **UNSCR 1373**

......

- 249. Where applicable, issues that relate to UNSCR 1267 and successor resolutions as described above equally apply to the implementation of the TFS provisions of UNSCR 1373 and are not repeated in this subsection.
- 250. On the basis of a previous legal framework (that was absorbed blye CTI), China has domestically designated organisations and 25 persons as terrorists, in tranches in 2003, 2008, and 2012. The four organizations concern the ETIM, the Eastern Turkistan Liberation Organization (ETLO), the World Uygur Youth Congress (WUYC), and the East Turkistan InformationCentre (ETIC). The 25 designated individuals are all linked to one or more of these organizations. The designation of these persons and entities was prior to the currenCTLwhich now requires Fls and DNFBPs to freeze the assets of these persons or entities. Four accounts have since been frozen, for a total amount of RMB 169.15 (approblem SD24.82), and the accounts remain frozen while the two account holders remain at large.
- 251. Since 2012 there have been no domestic designations. The 20 CGT Lincludes provisions that allow for the designation of terrorists. Designations can be made on an administrative basis by the National Counter Terrorism Leading Body. Requests can be filed by the MPS, the MSS, the MFAreogional/provincial counter-terrorism leading bodies. Courts can also decide to designate a person or entity as terrorists as part of criminal proceedings. As of the time of the onsite, no such designations have taken place. As is the case with proposed designations to the UNSC, this is despite the existence of Chinese nationals fighting in grain and Iraq as part of ISI br returning to China from ISIL-held territory. The same applies to persons who have committed terrorist attacks in China in recent year and the support networks of these attackers, also in these cases authorities have not used TFS.

Such as, for example, the 2010 Aksu bombing, the 2011 Kashgar attacks, the 2013 Tiananmen

252.

Regarding requests to other countries, authorites indicate that they have

- 253. Authorities indicated that the MFA would be responsible for receiving foreign requests to China for designations under UNSCR 1373. According to the authorities, no foreign country has ever made such a request to China.
- 254. FIs and DNFBPs were generallaware of the domestic lists of designated entities, but not so much in relation to the organizations and 25 persons related to ETIM. Most FIs would refer to the regulardomestic, law-enforcement watch list maintained by the MPS (which for the purposes fothe FIs would not make a difference).
- 255. Fls could not demonstrate an understanding that there is a possibility that the financial infrastructure in one part of the country may be used to finance terrorism elsewhere, or that TF and terrorism could be separted, with terrorist attacks taking place in one place, and the financing of such attacks taking place elsewhere. Rather, Fls expected TFrelated transactions to be linked closely to terrorism. This is somewhat of a concern considering that China has larginancial centres, both for traditional financial services and for new financial services (e.g., new payment systems, F

this case is actually in line with existing typologies

256. See also IO.4 for more details on compliance of FIs with FS requirements.

Square attack, the 2014 Kunming train station massacre, 2015 Guangzhou train station attack, and the 2015 Sogan Coal Mine attack.

UNSCR 1373 does not require states to positively respond to requests for designation, only to consider these requests.

## Targeted Approach, Outreach and Oversight of Risk Nonprofit Organizations

of social groups (368000), foundations (6500) and social services institutions (private non-enterprise units) (425 000) as well as 1227 separately regulated overseas nongovernment organizations. The MCA has the responsibility for the registration and oversight of social organizations while the MPS has the responsibility for the registration and oversight of overseas nongovernment organizations. China has failed to date to identify the subset of NPOs that, based on their characteristics and activities, are at risk of terrorist financing abuse as is required under **R**.

- 258. Since the reform and openingup in the late 1970s, social organizations have developed rapidly in China. Chinaecognises the positive role social organizations play in promoting economic growth, the development of soeity, the innovation of social governance, and the deepening of international relations.
- 259. In 2016, arising from a need to establish a comprehensive legal framework governing the NPO sector, the General Office of the State Council issumedOpinions on Reforming the Administrative System and Promoting the Healthy and Orderly

261. China addresses social organiziatns in its NRA under Chapter 7 TF Risk Assessment. The analysis,

(social organisations) and the laws and regulations in place to address fund management; responsible person management; activities management; governance, and integrity and self-discipline. There is no analysis as to the types or features of social organizations based on their activities or characteristics that make them vulnerable to TF abuse, neither is there an analysis as to the nature of threats posed by terrorist entities to social organizations or a subset of social organizations or how terrorist actors abuse social organizations. The NRA acknowledges that there are ; however, no cases of NPOs

being involved in TF activities were identifed.

262. The MCA has the powers to conduct appropriate supervision of social organizations. It has the authority to share information with other government

the AMLJMC. During the IRA process, China assessed the risk of its entire NPO sector, without limiting the assessment to FATF defined NPOs. While Chinaecognises the inherent risks of TF abuse faced by FATF efined NPOs, it failed to identify any specific risks of TF abuse faced by NPOs in China. The NRA did however identify ML

China has chosen to incorporate social organizations into its AML regulatory system. While oversight and regulation o

### Consistency of Measuresth Overall TF Risk Profile

264. China is a regular victim of terrorism, and Chinese nationals are also active overseas, such as most recently in ISIL controlled territory in Syria and Iraq. ETIM, has been designated by the UNSC under 1267 and successor ressorts. As is described above, for the past years this TF risk profile is not matched by corresponding measures to effectively implement preventive TFS measures. However, the focus of the authorities on criminal measures (convictions and confiscations) doesbalance this, as is set out comprehensively in relation to IO.9.

#### Overall Conclusions on Immediate Outcome

265.

# th On 1th

- 266. China lacks a comprehensive general legal framework to deal will Srelated to proliferation financing, despite the fact that PBC issued to to 187/2017 to address some of the shortcomings in relation to FIs. Notwithstanding the legal framework, the overall implementation of targeted financial sanctions related to TF in China suffers from three fundamental deficiencies (as set out below), as well as of a general absence of a focus on UNSCRs related to Iran. These three shortcomings are largely similar t those referred to under IO.10
  - x Scope issues and lack of prohibition Although Notice 2017/187 contains obligations for FIs to freeze assets of designated entities, China lacks obligations that require all natural and legal persons within the country to freeze without delay and without prior notice, the funds or other assets of designated persons and entities. China also lacks obligations that would prohibit all natural or legal persons to make any funds or assets available to designated entities (i.e., thee is no general prohibition). The authorities were unable to demonstrate that these deficiencies scope do not leave a gap in the effective implementation of DPRK and Iran related UNSCRs.
  - x Not all funds, assets and transactions are cover@because of Itese scope issues, as a country China is only able to freeze certain assets() those that would be held by a bank), but is not able to freeze assets that designated persons or entities may be holding themselves, or that other third parties may be holding. In addition, transactions outside the financial sector are not

- x No implementation without delay Authorities were unable to demonstrate that the freezing actions that the PBC Noticeprovides for are implemented without delay (i.e., ideally within hours). The initial delays are caused by untimely circulation of new UNSCRs within the government, even befotte PBC and others could circulate the UNSCRs to surpised entities.
- 267. It should be noted that the authorities acknowledged at a high political level the need for China to introduce a comprehensive legal system to deal with targeted financial sanctions related to proliferation financing, and the assessoralfy support the authorities in this endeavour.
- 268. In the absence of a general legal and operational framework for the implementation of the targeted financial sanction provisions of UNSCRs related to the financing of the proliferation of weapons of mass desuction, the PBC has taken steps to implement DPRKrelated requirements for the financial sector, most notably through PBC Notice 187/2017which includes freezing requirements (see also IO.10).57

Implementation of Targeted Financial Sanctions Related too Preferation Financing Without Delay

Although not required by R.7, the authorities report that China has taken other measures to reduce the overall risks of proliferation financing. This includes the soalled whole-ofgovernment counter-proliferation mechanism, in which 19 ministries and commissions participate with an aim to effectively control export of sensitive items, in closecordination with the so-called UNSCR implementation mechanism. In addition, the authorities report having taken measures that aim to implement norTFS related UNSCR provisions. This includes closing banks and other measures to cut financial connections thiDPRK; close entities owned or controlled by designated persons; and using criminal measures to suppress violations of the UNSCRs (such as a case of a successful seizure of banned metals by customs). It should also be noted that China has used its mechaism to apply to the UNSC for (delisting. For example, in 2016, Chinese MFA successfully applied for the disting of several Chinese vessels. Because of the limitations of the FATF standards, these measures have not been assessed or rated in this report.

- 269. The MFA is responsible for informing other state entities of the existence of new UNSCRs related to PF. Notices consist of a short cover note from the MFA, with a reminder to comply with the requirements, and a copy offte new UNSCR. Authorities shared a few examples of such notices with assessors. PBC is then responsible for communicating the UNSCRs (based & Notice 187/2017) well as issuing risk alerts to selected FIs. Risk alerts are reminders to FIs but do notinpose legal obligations and are not enforceable means and they do not constitute an obligation to freeze the assets of the designated entitle.
- 270. Some or more DPRIficiated UNSCRs and two Iramelated UNSCRs were circulated by the MFA to the PBC. It takes the MFA on average slightly over seven days to circulate these to the PBC (and other government entities) after issuing by the UNSC. This is not without delay, as defined by FATF Glossarvi.e., ideally within hours). It is not clear how long it subsequently takes for these lotices to reach FIs and it was not demonstrated that amendments to the lists of designated entities are communicated to financial institutions.
- 271. As is the case with UNSCR 1267 (see IO.,10)BC requires banks to use commercial compliance software to screen for designated persons and entities. This is also done to address the delays in circulation of MFA notices. This is a positive measure, despite the challenges that reliance on commercisal ftware providers can pose. See on this issue also below. Authorities also stated that they consider that the

the biggest banks are stateowned (and therefore should feelcompelled to comply). FIs that met with the assessment team generally did not show a wedleveloped understanding of the requirements of the Notice or of the UNSCRs, beyond having a high-level awareness of the existence of UN sanctions, and none mention theat they had identified or frozen assets. FIs also generally were unable to share practical examples of issues that would arise when implementing measur (s.g. updating lists, transliteration issues, incomplete info, similar or identical identifier information).

# Identification of Assets and Funds Held by Designated Persons/Entities and Prohibitions

272. To support implementation by banks, PBC has taken additional measures, such as providing training and requiring selected banks to screen their entire

<sup>450</sup> such alerts are said to have been issued. The one example that was shared contained generic language, reminding banks of the existence of UNSCRs.

- 273. Authorities were able to provide data on the number of accounts frozen by Chinese banks of ix entities prior to their designation by the UNSO? Although it is not clear how these assets were identified (e.g., domestic intelligence, foreign requests, by the banks or by authorities), and what the purpose of the freezing action was (e.g., criminal, preventive) these freezing actions devidence acommitment on the part of the Chinese authorities to act against PF.
- The UNSC Panel of x perts established pursuant to Resolution 1874 (2009) (hence: DPRK PoE) publishes annual updaten the implementation of DPRKelated sanctions, including the financial provisions of relevantUNSCRs that have been incorporated into the FATF Standards. Based on these updates, it appears that there is room for improvement regarding the identification of assets and funds held by designated persons and entitiesThe DPRK PoE reports cite examples accounts, funds or assets held by designated entities in China, and (front) companies run by designated entities in China, some of which acted as de facto banks for the DPRK in China, until detected. The authorities report that the DPRK PoE has send 50 quests to China for information, of which ten requests related to the financial sector, and that China actively cooperates with the PoE. An example of such a requirest which China

<sup>37</sup> The names of the entities and the details of the accounts that were frozen were shared with assessors.

responded related to assistance that the DPRK PoE needed in the casein the Chol-Sam to investigate three companies.<sup>39</sup>

- $f ext{ † } ext{ ï } ext{ † ‡ " <math>-f ext{ † } ext{ $\%$} ext{ ` } ext{ } ext{ } ext{ ` ' } \check{\mathsf{Z}} ext{ ` } f ext{ } \dots ext{ ‡ } ext{ $\mathsf{TM}$ ` $\mathsf{C}$} ext{ } \check{\mathsf{S}} ext{ $\mathsf{m}$} \check{\mathsf{Z}} ext{ ` $\%$} \overset{\mathsf{T}}{\mathsf{J}} ext{ $\mathsf{C}$} ext{ $\mathsf{M}$} \overset{\mathsf{TM}}{\mathsf{S}} ext{ $\mathsf{C}$} \overset{\mathsf{TM}}{\mathsf{S}} \overset{\mathsf$ 
  - 275. From discussions with the private sector, only FIs (except for online lending institutions) are aware of the existence of UN sanction regime. To references were made to the specific domestic legal obligations to freeze assets of designated entities in relation to PF, although in practice this does not seem to matter. FIs would generally make general references to UNelated obligations to freeze assets of designated entities, without distinguishing between TF and PF.
  - 276. The benefits and challenges noted in IO.10 in relation to the use of compliance software to detect funds or assets of designated entities, equally apply to IO.11. The same applies to the FIs understanding of the legal requirements of the legal framework in China or of the UNSCRs, beyond being able to cttree basic legal requirements. As indicated, this is somewhat in contrast to the results of the screener of the screener

# Competent Authorities Ensuring and Monitoring Compliance

277. As indicated, authorities stated that CDD rules (not related to PF) and self imposed rules by FIs robustly prevent the misuse of the financal ce3.00iated, re W\* n BT /TT0 11.0

112	CHAPTER 4	TERRORIST FINANCING AND PROLIFERATION FINANCING	
112	OHAI TEIC4.	TERRORIOT FINANCING AND FROEII ERATION FINANCING	_

# d th

#### A

# **Key Findings**

- a) While FIs have a satisfactory understanding of their AML/CFT obligations, they have not developed a sufficient understanding of risks. Measures implemented to mitigate risk are generally not commensurate with different risk situations.
- b) The most significant CDD deficiencies relate to ineffective plementation of requirements related to BO andongoing due diligence. Transaction monitoring by some financial institutions does not focus on assessing whether transactions are in line with the institutions, including some banks, do not systematically refuse business when CDD is deemed incomplete.
- c) Measures for identifying foreign PEPs and persons entrusted with a prominent function by an international organization, and establishing their source of wealth, are not effective. Given the significance of corruption in China, the absence of measures appetible to domestic PEPs represents a serious vulnerability.
- d) Considering TF risks facing China, the effectiveness of TFS could not be established, including because some FIs do not screen the unterparties to transactions.
- e) The types of transactions that are reported are not in line with ML/TF risk profile. The effectiveness of reporting of suspicious transactions is hampered by the insufficient understanding of ML/TF risks, theonerous criteria for determining whether to report an STR or a key STR and the lack of reporting from non-bank Fls.Pls seek to form more than a reasonable suspicion of a predicate crime prior to reporting, which represents high threshold. Less than 5% of STRs are reported byPls, while they are identified as having higher-risk of ML/TF in the NRA.
- f) Internal controls of Chinesefinancial groups are often inappropriate for mitigating risks, notably when regulations of host countries prevent access by FIs to information held by foreign branches or majority owned subsidiaries for the purposes of CDD and ML/TF risk management Considering theimportance of foreign branchesof Chinese FIsgroup wide AML/CFT programs implemented by financial groups have a limited effectiveness.

- g) Except for DPMs, DNFBPs are not covered by the AML/CFT framework. DNFBPs have not developed an understanding of ML/TF risks and do not apply preventive measures effectively.
- h) Online lending institutions are not covered by the AML/CFT frameworkand have not developed an understanding of ML/TF risks and do not apply preventive measures effectively.

#### Recommended Actions

- a) Shortcomings in the AML/CFT legal framework related to the coverage of online lending institutions and DNFBPs should be addressed.
- b) The robustness of risk assessments of FIs should be enhanced to ensure that these reflect actual threats and corresponding vulnerabilities exposing these institutions to risk. Ongoing due diligence hould be strengthened to ensure a better detection of actual theats. These objectives can be achieved through guidance, feedback, and improved typologies.
- c) Guidance and training should be provided to FIs and DNFBPs to develop a good understanding of the concept of beneficial ownership and to ensure a systematic rejection of business when CDD is not completed.
- d) AML/CFT requirements in relation to domestic PEPs and TFS should be established
- e) The criteria for reporting suspicious transactions under regulatory requirements should be streamlined for all reporting entities, including PIs. Guidance is required to address the inconsistencies of reporting practices by FIs.FIs and DNFBPs should be provided access to reliable, independent identity.
- f) Financial groups should (i) apply mitigating measures that are commensurate with the risks of the host country, (iii) strengthen group oversight, including the scrutiny of transactions and the reporting of suspicious transactions, and (iii) inform the PBC of instances of inability to access information held by their branches of subsidiaries.
- 279. The relevant Immediate Outcome considered and assessed in this chapter is IO.4. The recommendations relevant for the assessment of effectiveness under this section are R.923.

# th On 490

# Understanding of ML/TF Risks and AMCFT Obligations

280. Except for online lending institutions, FIs have a satisfactory understanding of their AML/CFT obligations, but an insufficient understanding of ML/TF risks. FIs

- 281. Most banks identify threats of ML, such as proceeds of illegal fund raising, underground banking, and telecom fraud. This identification is largely derived from the results of the NRA and priorities of regulators and law enforcement authorities. Some banks aremore concerned about proceeds of embezzlement, corruption, online gambling, and tax evasion, or POC generated outside China. Information received form supervisors suggests that Plsonsider online gambling and pyramid scheme as main ML threats, while somePls met during the onsite identified illegal fund raising as main threat. Overall, norbank Fls (including Pls) have a poor identification of threats of ML. In general, Fls did not demonstrate a developed or comprehensive understanding of AML/CFT vulnerabilities, such as determining the aspects of their business that are exposed to these threats and the extent of this exposure. Except for online lending institutions, the threat of TF is commonly identified by Fls; however, the understanding of domestic threats is primarily limited to transactions associated with the Xinjiang province.
- 282. Banks identify AML/CFT vulnerabilities posed by geography inside China (e.g., Guangdong and Xinjiang provinces; coastal regions in the southeast), or other countries, including those identified for having strategic AML/CFT deficiencies by the FATF. Nonbank FIs generally did not demonstrate such an ability. Except for online lending institutions, most FIs identify nonface-to-face, including online, business as the main vulnerable delivery channels. Banks and some insurance companies identify products/services most vulnerable to ML/TF (e.g., crossporder remittances; ebanking; cash), while the other FIs did not demonstrate such an ability. Most FIs identify only PEPs as a highisk customer category. Instead, institutions focus on the risk assessment of individual customers, as required by PBC. Some banks, however, have a more comprehensive identification of customer categories that are vulnerable for ML (e.g., small business owners; cash intensive businessed egal entities) and TF. Only some banks appeared to have developed a certain understanding of these vulnerabilities, especially for products and services, delivery channels, and geography. Fls, especially no-banks, generally have a poor understanding of vulnerabilities posed by the different categories of customers (e.g., legal persons;

non-residents; cash intensive businesses etc.). Information received from supervisors suggests that insurance and securities companiese inditify businesses representing higher ML/TF vulnerability (e.g., securities companies identify brokerage and asset management businesses), but it does not amount to an assessment of vulnerability.

- 283. Except for online lending institutions, most FIs understandheir AML/CFT obligations. Some institutions tend to apply standards going beyond domestic requirements, due to the purchase of IT solutions or databases from foreign third party providers. A few institutions demonstrated confusion regarding some obligations (e.g. reporting of suspicious transactions; due diligence towards domestic PEPs and accounts in anonymous names).
- 284. DNFBPs relate the lack of understanding of ML/TF risks and AML/CFT obligations to the lack of coverage by the AML/CFT framework. DNFBPs not have a proper appreciation of the existence and extent of ML/TF risks in China. Some DNFBPs (i.e lawyers and DPS) consider that the AML Law and some business regulations require the implementation of due diligence, record keeping and the reporting of suspicion; however, the understanding of such requirements is lacking. It was noted that accountants do not perform any of the activities that could subject them to the requirements of FATF standards.

#### Application of RiskMitigating Measures

- 285. Mitigating measures that are generally applied by Flare generally not commensurate with their risks. DNFBPs do not apply such measures.
- 286. Only few banks appeared to have designed and implemented mitigation measures somewhat adapted to the risks (customer risks and, tolesser extent, the risk of transactions) they identified. These measures are mostly concentrated in the customer identification (e.g., where risks of failure of identification are higher: facial recognition technology) and transaction monitoring (e.g., for overseas ATM withdrawals: monitoring of number of accounts open, identical phone numbers or IP addresses used by multiple customers). However, given the limited understanding of risks, these measures are not sufficiently commensurate with the actual MTLF risks. Except for online lending institutions, FIs generally assess the risk of customers and implement enhanced due diligence if the risk is high or to address risk warnings issued by the PBC. However, the set of data implement emasures adopted in the cases.

particularly enhanced due diligence, is standard (same measures applying to same customers or transactions assessed to have a particular risk level), applies to different risk situations invariably, and, therefore, is not commensurate with the type and extent of risks. Some FIs (including PIs and online lending institutions) set transaction caps or measures (e.g., business restrictions based on geography) that limit the exposure to risks; however, these measures are not necessarily specific for, or effective in, mitigating ML/TF risks (e.g., limits to credit that are automatically revolving). A few FIs tend to avoid risk by refusing business with certain types of customers or transactions.

287. DNFBPs generally do not apply any ristnitigation measures.

# Application of CDD and Record Keeping Requirements

288. CDD measures applied by FIs are generally not effective. Those level of understanding, identifying and verifying of BO and deficiencies in obtaining BO information represent the most serious deficiency. Customer identification and verification measures and ongoing due diligence are generally performed with limited effectiveness. Record keeping measures are relatively more effective at most FIs. Banks demonstrated a better implementation of these requirements than the other FIs. DNFBPs do not apply CDD and record keeping measures effectively.

289. Most FIs describe a successful implementation of identification measures and verification of identity through the System of Network Check of Citizen Identity Information (SNCCII) However, supervisory findings commonly refer to breaches related to shortcomings in the CDD process, such as incomplete or outdated information on customers, or the expiry of identification documents. Among contributing factors are data limitations of the SCNCH1, the insufficient access to other reliable, independent source data that can be used for verification purposes, and the inconsistent use of data verification sources mainly by nelbank FIs. There are media reports concerningthe frequent utilization of stolen42 or fake identities, and reports about government initiatives to address such breaches.From March

Authorities reported that the SNCCII has a correction mechanism that regularly updates the system for error messages identified, resulting in the coverage of invidIID information as of April 2018.

Seewww.chinadaily.com.cn/china/2016-05/25/content\_25455343.htm

<sup>43</sup> Seehttp://news.cnr.cn/nati\_ve/gd/20170428/t20170428\_523731160.shtml\_.

2018, the PBC began the pilot work of requiring financial institutions to carry out identity verification for invalid IDs, <sup>66</sup> including IDs which were lost or stolen, and IDs which were inconsistent with information of SNCCII. The table below illustrates progress in identification of false ID.

(Unit: Persons or Times

2

290. Several institutions adopted recognition technologies to mitigate this risk,

challenge for all FIs given the lack of availability of information or data on BO from a reliable source. FIs experience additional difficulties in verifying BO of ne6hinese legal persons. Supervisors stated that theguide institutions to verify BO information through the National Enterprise Credit Information Publicity System and thireparty data providers. However, it was not demonstrated thatthey are reliable sources of information on BO. Online lending institutions do not seek to understand BO.

292. Except for online lending institutions, FIs generally rely on IT solutions for the real-time monitoring of transactions to detect ML/TF unusual transactions. These solutions are developed, or customized to a certain extertity the institution, and are based on risk indicators that are mostly drawn from PBC risk warnings, and in some cases, were prepopulated by vendors. Except for some banks, most FIs rely on indicators that are generic or not comprehensive enough to detect llaunusual transactions. A few institutions (e.g., some securities brokerage institutions) rely on manual or basic solutions for the monitoring of transactions, which does not seem to be commensurate with the volume and risks of their activity. Some institions (e.g., PIs) do not use information collected under CDD in the monitoring procesis, order

customers and their business. Fls generally recognise that there is room for further improvement of their ongoing duediligence systems and processes. Supervisory findings commonly reflect breaches related to the monitoring of suspicious transactions.

- 293. Except for online lending institutions, most institutions conduct periodic reviews of documents, data and information collected under the CDD process to update it, while only some of these appeared to exert ongoing and effective efforts to maintain documents, data and information upto-date. However, efforts of most institutions are limited to periodic updating plans, with higher frequency for higher risk clients. Some institutions do not updatetheir records on the occurrence of risk related events. Supervisory findings commonly reflect breaches related to the updating of documents and data.
- 294. Fls generally refuse business when CDD is incomplete, with the exception of online lending institutions that do not apply effective CDD. A few institutions, including some banks, do not systematically refuseusiness when CDDs deemed incomplete, and resort instead to limitations on transactions or postponement of some identification measures with little regard to related risks. A few institutions

(e.g., banks) keep dormant anonymous accounts. These are accounts that existed before the law prohibited anonymous accounts and the institutions have been unable to contact the owners of the accounst to undertake the necessary CDD measures. Institutions reported that they do not allow transactions to be conducted with these accounts.

295. Most FIs apply recordkeeping requirements effectively. However, some institutions do not keep records of businesscorrespondence. Supervisory findings occasionally reflect breaches related to recordkeeping requirements more generally.

296. DNFBPs do not apply CDD and recorkeeping measures effectively. Only some DNFBPs (i.elawyers and DPS) apply limited customer-identification and record-keeping requirements for regular business purposes risks; however, the implementation is not effective. DNFBPs generally do not refuse business, except when basic identification measures could not be performed. Most serious deficiensie are the verification of identity (for DNFBPs), due diligence towards beneficial owners, and ongoing due diligence. Record keeping is limited to transaction records and client identity documents.

# Application of EDDMeasures

297. In general, FIs are moderately effective in applying EDD measures. Measures applied to PEPs are not effective especially considering the significance of corruption. Measures related to correspondent banking relationships, new technologies, and wire transfers are relatively more effective. The implementation of TFS is not effective, especially considering the domestic and external TF risks that China is facing. Measures related to countries with high risk are not commensurate with the risk of business relationships and transactions involving such countries. DNFBPs do not apply EDD measures.

298. Except for online lending institutions, FIs consider PEPs as highsk customers and rely on third-party databases for the identification of PEPs. Foreign PEPs and persons entrusted with a prominent furtion by an international organization are subject to enhanced measures. However, only a few banks appeared to have proper risk-management systems to identify customers that are PEPs, such as by ensuring that beneficial owners, family members, and closes as iates are also identified as PEPs. Other types of FIs relying on third databases do not adopt such diligence in identifying PEPs. Some institutions (e.g., some trust management

and securities brokerage institutions) perform a manual screening to extermine whether a customer is a PEP or not. Fls do not apply specific measures towards domestic PEP; however, the risk classification of uch customers is likely elevated pursuant to identification. Most Fls do not establish the source of wealth and to a certain extent the source of funds, of foreign PEPs and persons entrusted with a prominent function by an international organisation. Few Fls may terminate business relationships with such clients when subsequently identified as PEPs. For some Fls (e.g.,some Pls), senior management approval is not necessary to initiate a business relationship with a PEP.

299. Most FIs providing correspondent banking relationships implement specific measures before engaging with respondent banks, such as gathering information on

approval. However, only a few banks appeared to have developed a satisfactory understanding of the nature of the business and the quality of supervision of respondent institutions, including whether it has been subject to ML/TF investigation or regulatory action. Such insufficient understanding of respondent institutions, affects the effectiveness of correspondent institutions in managing risks associated with these relationships that may involve transactions with highrisk countries or countries under UN sanctions. Banks reportedly do not provide services through payable-through accounts and do not establish business relationships with shell banks.

- 300. FIs, especially payment and dime lending institutions, rely extensively on new technologies for the provision of services, mainly in areas of customer identification, channels of delivery, and conduct of transactions. Banks and PIs assess the risk of using new products, practices, at technologies prior to launching. The assessment of such risks by banks covers ML/TF risks and reportedly led in some cases to dropping new products perceived as having an unacceptable risk. Some PIs were sanctioned by the PBC due to the inappropriate mangement of ML/TF risk of new products, which contributed to notable improvement in risk control measures. For other types of FIs, it is not clear to what extent the risk assessment is performed or covers ML/TF risks. This is an area of concern given therefited understanding of ML/TF risks by these institutions.
- 301. Fls providing wire transfer services ensure that necessary originator and beneficiary information is included when initiating, forwarding, or receiving a wire

transfer. If a transfer is rejected by the receiving bank due to incomplete information, FIs will seek to complete the information and resend the transfer. Institutions reject wire transfers received if necessary information is lacking. It is not clear how effectively originating banks are implementing this requirement considering the weaknesses in their CDD which are likely to affect the accuracy and veracity of information of originators of transfers.

- 302. The implementation of TFS by FIs is not effective. Except for online lending institutions, FIs maintain databases of names of persons and entities designated under UNSCRs relating to the prevention and suppression of terrorism and TF. These lists are usually acquired from and updated through third party providers. These institutions also maintain lists of persons related to terrorism offences, provided by the PBC and the MPS. These lists are checked, generally using IT solutions, against names of existing customers and parties to transactionsDue to deficiencies in obtaining BO information most institutions are not in a position to ensure that TFS are applied towards designated persons that are beneficial owners. A few institutions (e.g., some trust management companies) match transactions only at the end of the business day, which would not allowfor an effective implementation of possible freezing measures. Mostly banks encountered false positives, but it is not a common practice for these to clear the case through conducting queries with the PBC. However, some institutions, including some banks eported that no false positives were encountered. Due to the absence of statistics, it was not demonstrated that FIs identify or freeze assets pertaining or destined to designated persons or entities. Fls consider that the deadline for freezing such assetwould be 24 hours, should any be identified, but would freeze assets promptly if the hit is positive.
- 303. Except for online lending institutions, most FIs apply enhanced due diligence towards business relationships and transactions with natural and legal preons from countries for which this is called for by the FATF. Thesimancial institutions maintain list(s) of higher-risk countries that include those for which this is called for by the FATF. Some institutions would also supplement the list with countries they deem to have higher ML or TF risk, spontaneously or based on information on risk disseminated by the PBC. However, a few banks apparently apply a standard set of enhanced due diligence (EDD) measures that is not commensurate with the specific risk of transactions with natural and legal persons from countries for which this is called for by the FATF (For example, same EDD measures in scrutising of transactions of domestic customers would also apply to customers from FATEsted

countries, thus noregard to specific country risks). Therefore, given the shortcomings related to enhanced due diligence, it is not likely that applied measures are proportionate to the risks of such business relationships and transactions.

304. Despite ML/TF risks of various **o**mponents of the DNFBP sector, the latter do not apply EDD measures. This is mainly due to the lack of understandi**o**fgrisks and the lack of legal AML/CFT requirements.

# Reporting Obligations and ipping Off

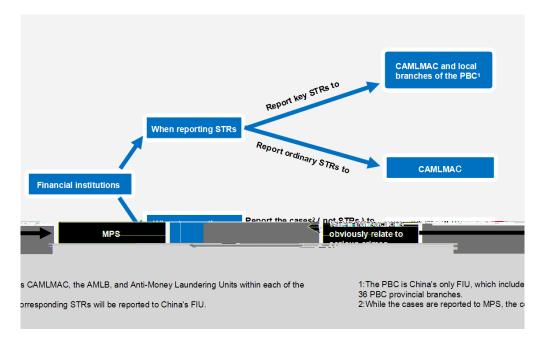

305. In general, FIs are moderately effective in reprting suspicious transactions. There are inconsistent practices of reporting, some of which coulebtentially trigger tipping-off (see further below). Types of proceeds reported in STRs seem inconsistent with the risk environment and are concentrated in the banking sector the number of STRs reported appears to be modest, considering the size of the financial sector in China. The reporting of suspicious transactions by DNFBPs is very rare: only six STRs submitted so far.

306. FIs report to CAMLMAC funds that aer suspected to be the proceeds of a criminal activity or are related to TF. For transactions where ML/TF conduct is obvious.<sup>67</sup>

related to terrorism or TF or conduct affecting national security, institutions report (as required) key STR\$\(^8\), mostly in writing to PBC branches. The same information is simultaneously reported to CAMLMAC. Some financial institutions experience challenges in determining whether a case should be reported as STR or key STR. If no predicate offence is identified, some institutions would report STRs to CAMLMAC, while others would report the case to MPS without submitting an STR to CAMLMAC. Some institutions (e.g., some banks) also send reports on suspicioms taneously to the local PBC branch and MPS. Therefore, reporting practices are not consistent across all FIs. However, authorities explained the reporting process (see figure below) and stated that FIs would report to MPS (with corresponding STRs sentthee

See TC Annex c.20.1.

See analysis under IO.6 and TC Annex, c.20.1.

307. The reporting of suspicious transactions is not done promptly. For non obvious ML/TF conduct, an average of 1015 days elapse between the discovery of an unusual transaction and the reporting of suspicion by FIs (mainly banks), if any. During this time, the FI consultsand updates as necessary CDD information, and conducts further analysis to confirm suspicion. However, once a suspicion is formed, most FIs consider that the deadline for reporting suspicion is five business dayse (1) days for PIs) therefore, the practice tends to be the reporting within five days Measures for

the Administration of Financial Institutions' Reporting of Large alue Transactions and Suspicious Transactions

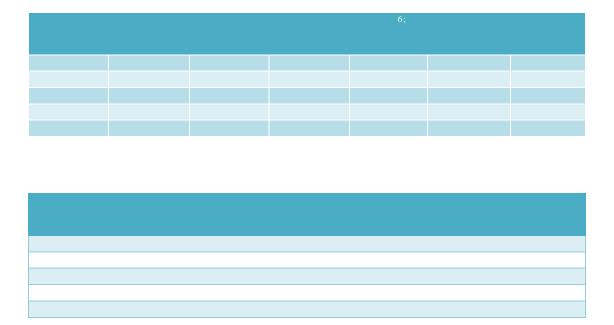

Fls to submit an STR promptly, which is specified to be no later than five working days. The articulation of five working days is inconsistent with the notion of promptly and constitutes a technical deficiency which has been addressed by a regulatory podate at the end of the orisite visit.

308. As indicated in IO.6, CAMLMAC and the PBC provincial branches have worked with FIs since 2012 to reduce the volume of defensive reporting and improve the quality of STRs and key STRs. The number of STRs decreased signifity, against an increase in key STRs. Overall, the quality of key STRs is higher than the quality of STRs because financial institutions conduct a more indepth analysis to identify a predicate offence in view of reporting a key STR. According to the PBC high percentage of key

<sup>69</sup> which are disseminated to LEAs.

Therefore, key STRs are generally gooduality reports, while STRs have less indepth analysis impacting their quality.

309. Banks report more than 95% of STRs and key STRs (the majority of the other reports are made by PIs). The structure of reporting by type on stitution is therefore inconsistent with the ML/TF risks of sectors, such as PIs and online lending institutions assessed to have high ML/TF esidual risks in the NRA, and life insurance institutions assessed to have medium ML/TF risks. Online lending institutions, which are not subject to AML/CFT supervision; did not report suspicious transactions. There is also a concentration of reporting to a number of FIs under each category (see tables below).

<sup>47</sup> See analysis under IO.9.

<sup>48</sup> See analysis under IO.3.

Trust companies, financial asset management companies, finance companies, financial leasing companies, auto finance companies and money brokerage companies.

Considering the size of the financial sector in China, and the size, intensity of activity and ML/TF risks of some sectors, the overall number of TRs appears to be modest, yet decreasing in the banking and insurance sectors (somet table above). One of the contributing factors could be the insufficient understanding of ML/TF risks and the demanding criteria for reporting suspicious transactions, requiring the determination whether an STR or a Key STR should be filed. Fls oneport a key STR to a PBC provincial branch and CAMLMAC when they are able to identify an underlying predicate offence, otherwise, they would file a whistle blower report directly with LEAs without filing an STR or key STR in paraller. Therefore, there clearly exists a need for guiding reporting entities to address the ambiguity in the reporting requirements as to whether to file an STR or a key STR. As for Pls, more than a reasonable suspicion of a predicate crime should be formed prior to reporting, which represents a high threshold of suspicion3. These practices could explain the quick drop in the number of STRs and the increase the number be STRs since 2012, thus affecting the effectiveness of reporting by FISSupervisory findings commonly reflect breaches related to the reporting of suspicious transactions.

311. The authorities submitted information related to key STRs but could not submit information on the nature of predicate offences related to reported STRs. However, most FIU dissemination 2016 re

<sup>75</sup> (50%), terrorism (15%), financial fraud (8%), drug crimes (4%), and corruption and bribery (2%). Fls apparently have a better ability in identifying transactions associated with terrorism than with TF. As a very limited

.......

<sup>50</sup> See analysis under IO.6.

oactive Disseminations (by Types of Crimes).

Includes the crimes of: illegal absorption (including in disguised form) of public deposits, forging or altering financial bills, relending loan currency to others at a high interest rate, evading the state **o**ntrol of foreign exchange and ML.

5

number of institutions report suspicious transactions on TF (see table below) especially in the banking and PI sectors where TF risks are classified as highChina could not demonstrate theeffectiveness of reporting of suspicion TFExcept for on line lending institutions, FIs report attempted transactions involving suspicion however, it is not clear to what extent this practice is consistently applied.

312. The practices of some institutions when reporting suspicious transactions appear to involve risks of tippingoff. Some Fls (e.g., some Pls) reportedly freeze transactions with customers upon reporting suspicious transactions without informingi

5"

inappropriate for mitigating risks, especially when regulations of host country prevent access to information.

Except for online lending institutions, FIs implement programs against ML/TF and have compliance arrangements in place; however, the effectiveness these programs is often questionable. Although institutions developed policies and procedures, these are not designed or implemented on a ristensitive basis, as elaborated above. Institutions sanction staff who commit financial crimes (e.g., fraud); however, most institutions do not sanction staff for breaching AML/CFT policies and procedures. Training programs are frequently implemented by most institutions, and cover all staff with AML/CFT responsibilities, including senior management. However, training programs of some institutions (e.g., some banks) do not effectively include senior management, including directors of the Board, (see table below: compare attendance of senior management with number of training sessions), and are not sufficiently sopisticated to improve the skills of staff with key AML/CFT responsibilities. Some FIs, including banks, consider that they could benefit from further investment in resources to improve the capacity of staff and senior management. Audit findings generally do not cover important shortcomings identified by supervisors, such as the monitoring and reporting of suspicious transactions. For many institutions, including banks, the reporting of AML/CFT issues to the senior management focuses on regular compliance uses and individual cases of suspicion. More general risk management issues identified by compliance management are not consistently reported to the senior management.

316. Foreign branches and majority-owned subsidiaries of Chinese banks are significantly relevant to the financial system? The effectiveness of groupwide AML/CFT programs implemented by financial groups is limited. Groups have

<sup>54</sup> See info under Chapter 1.

5

compliance and auditfunctions at the group level. Requirements for branches and majority-owned subsidiaries appear to mirror those applicable in China, except for host countries with stricter requirements. However, the monitoring of transactions and the management of risks of these branches and subsides does not seem to be sufficiently effective. Group oversight functions, sometimes, do not proactively identify, request information on, nor analyse unusual transactions or questionable risk management practices. A number of institutions reported theimability to access information held by their branches or subsidiaries in some countries due to data protection rules. PBC statistics indicate that, on average, nearly 50 Chinese financial groups experienced issues in accessing information held by theiorfeign branches and majority-owned subsidiaries in recent years. Most of these institutions stated that issues of access to information are resolved by conducting onsite visits, and some did not take actions to address these issues. In such circumstances ancial groups do not seem to apply appropriate additional measures to manage the ML/TF risks, and do not inform home supervisors. Sanctions applied by foreign regulators on branches and majority-owned subsidiaries operating abroad (including for failureto identify and report obvious suspicious transactions, and, in one case, for tipping off concerned customers) suggest that groupwide AML/CFT programmes of some financial groups do not ensure that stricter standards are implemented when there are jurisdictional STR reporting differences, and are therefore not effective in managing ML/TF risks.

317. DNFBPs do not implement programs against ML/TF. This is mainly due to the lack of regulatory requirements.

Overall Conclusions ol 0.4

318.

#### Recommended Actions

- a) Supervisory resources at the PBC should be reviewed to arests the need for increasing orisite inspections in the banking sector, adequate supervision of the DNFBP sectors, and thextension of the AML Lawto the online lending sector.
- b) The PBC should review the balance of resources applied to inspections of high-risk financial institutions by increasing the frequency of inspections of high-risk banks to address the growth in this egment of the supervised population.
- c) The PBC another financial sector supervisors should ensure there is a consistent application of supervisory processes to focus on effective risk based implementation of internal controls applicable to or supportive b AML/CFT obligations.
- d) China should extend the AML Lawto cover the online lending sector and ensure effective AML/CFT supervision to the PBC
- e) China should demonstrate collaboration with the relevant DNFBP sector regulators/SROs in designating the DNFBRs will be subject to the AML Law. It could also consider amending this requirement of the AML Lawto give sector regulators a supportive role similar to that of the sector financial regulators.
- f) China should conduct a risk assessment of individuaNFBPs as defined by the FATF (apart from trust companies and DPMs) to ensure that (i) appropriate market entry and preventive measures are established, and (ii) the PBC can supervise and monitor appropriate AML/CFT obligations. In doing so, China should eview the strategy and necessity of collaborating with sector supervisors in the DNFBP sectors, given their low level of knowledge about ML/TF risks.
- g) China should review the effectiveness, proportionality, and dissuasiveness of financial sanctions, and cosider substantially increasing the size of penalties for violations of the AML Law, especially for penalties levied against the largest FIs by PBC for violations of the ML Lawor by sector supervisors for system weaknesses across financial groups.
- h) China should prepare guidance directed at the DNFBP sectors to assist them in implementing AML/CFT measures when they become formally designated as DNFBPs.
- 319. The relevant Immediate Outcome considered and assessed in this chapter is IO.3. The recommendation relevant for the assessment of effectiveness under this section are Rs.26 28, Rs.34 and 35.

#### Introduction

- 320. The AML Law(Arts. 4 and 36) provides inter alia that the PBC is in charge of AML/CFT supervision and administrationthroughout China. In the financial sector, its work is supported by the sector financial regulators, and in the DNFBP sector, it is required to supervise in collaboration with sector regulators.
- 321. There is a large orline lending sector which is subject thigh level AML/CFT obligations. While PBC is the designated supervisor for this sectothe sector is not yet subject to any AML/CFT supervision.

322.

enerally, PBC treats PIs as FIs but as noted above PIs are not supervised by the sector financial regulators; their AML/CFT supervisor is PBC.

323. The financial sector supervisors have a defined AML/CFT supporting supervisory role (See TC analysis) that is foc

Financial sector supervisors cannot impose sanctions against FIs for AML/CFT violations under the AML Law, and can only impose sanctions against FIs on the implementation of internal controls required by sectorlegislation.

- 324. For DNFBPs, the AML Lawrequires the PBC to designate the DNFBP sectors that are subject to the AML Lawred AML/CFT supervision collaboratively with each
- . At the time of the on-site visit, these were the MOHURD for the real-estate sector; the MOJ for the lawyers sector; the MOF for the accounting sector; and the SGE (which is supervised by the PBC) which is an SRO for DPMs. As with the financial sector, DNFBP sector supervisors and SROs cannot impose sanctions against FIs for AML/CFT violations under the AML Law.
- 325. For more than 10 years, the authorities have had ongoing discussions with DNFBP sectors and some sector supervisors about designated AML/CFT coverage and supervision. The NRA confirms that the DNFBPs have not yet constructed effective CFT working systems and that the specific coverage of DNFBPs in China is not clear. China has not yet designated AML/CFT obligated DNFBPs, which is required in the AML Law Detailed CFT obligation requirements for DNFBPs have not been issued; neither are there detailed requirements specific to DNFBPs on customer

identification, due diligence, or transaction reports. Overall, there is a lack of relevant regulation and guidance for CFT measures in DNFBPs.

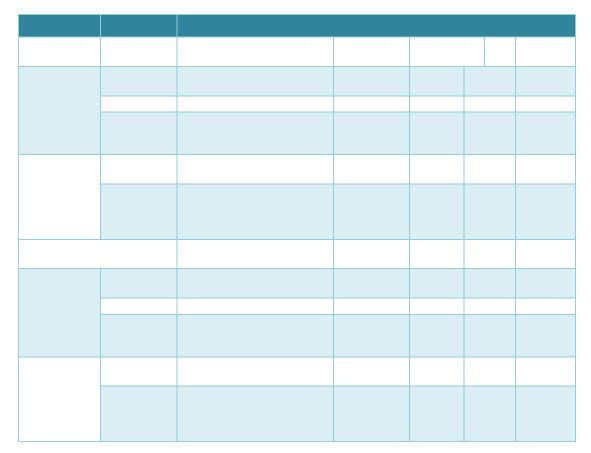

- 326. During the on-site visit the PBC, as authorsed by the AML Law purported to designate the categories of DNFBPs that are subject to AML/CFT obligations in China (except for trustee services, which are provided by trust companies regulated as FIs in China, and DPMs see TC analysis). Authorities add not demonstrate effective collaboration between the PBC and the DNFBP sector supervisors as part of the required process of purported designation and have therefore not accepted the designation as being compliant with the AML Lawand thus not in effect
- 327. The purported designation Notice named CSPs as a DNFBP sector, despite the information in the NRA precluding the existence of, and a risk assessment of, the CSP sector. The NRA states that there is no CSP sector in China despite instances of the use of CSPs by illicit actors, of which China is aware. During the **-site** visit, the authorities advised the assessors that the CSP sector in China engages in agency services such as business registratioand consulting services, which according to the authoriti

not share this view based not only on their understanding of the FATF definition but also on several interviews conducted with CSPs during the on view is that company formation services, including the provision of business addresses, correspondence and administrative addresses for legal persons, are offered by CSPs in China.

"

normally provided by MPS. As noted in the TCA, there is a minimum period of between three to five years to be covered in criminal checks, depending the sector. However, in practice the authorities screen all applications through th criminal databases with no time limit, and thus the authorities can obtain any applicable criminal background information as of the date of the data request.

330. The following tables set out statistics about the fit and proper process applied by the authorities in the financial sector between 2015 and 2018.

#### Table notes:

the same holding group; the licenses of 16 PIs with serious violations were not renewed, and the licenses of 6 were revoked. The following table provides a further breakdown of the types of PI licensed in China

breakdown of the types of PI licensed in China.

333. The regulations governing online lending institutions appear to focus on defining the sector in terms of personto-person (individuals lending to other individuals) and companies. The banking regulator has issued general (not AML)

seems tobe ensuring that operators do not conduct uauthorised business such as fund pooling or other illegal activity.

336. In summary, there are a few shortcomings in the fit and proper TC framework in most of the regulated FI subsectors (see TC analysis), mostly relating to the minimum periods of time applicable to criminal background checks, but in practice criminal records are accessed by the authorities in processing fit and proper applications. There are no measures applying criminabackground checks by the provincial authorities in the online lending sector. In the DNFBP sector, the real estate, DPS and CSP sectoms not subject to entry or ongoing criminal background checks, and the scope of checks by sector authorities is not clear in the legal and DPM sectors.

### — ' ‡ " ~ Un'derstandingand Identification of ML/TF risks

#### **Financial Sector**

337. The PBC imposes obligatins on FIs to conduct inherent risk assessments (Measures for the AntMoney Laundering Supervision and Administration of Financial Institutions (For Trial Implementation)), to update this assessment annuallyand provide information to the PBC. The PBC bassued rules and guidance to FIs on the model to use to measure inherent risks, and controls. The PBC uses this information as the starting point for its own risk analysis. These measures establish a system of rating the residual ML/TF risk levels in FIsby assessing the identified inherent ML/TF risks and the strengths of the control measures implemented by FIs to mitigate those risks. The rating for each FI determines the overall level of residual risk, which is used to priorit ise supervisory measures.

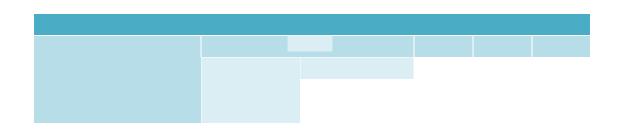

338.n

fall into prescribed categories based on size thresholds and products. Fls are required to classify clients as high risk under certain specified circumstance\( \frac{1}{2}\) he Guidelines do not apply to the online lending sector as they are not subject to PBC supervision.

- 339. Risk classifications by FIs are subject to review by the PBC, but the extent to which the PBC applies directions where they believe institutions have not assessed risks accurately is not clear. The PBC provided a number of case studies demonstrating how this process works in practice and illustrating examples of directions to change risk assessments to take into account inherent risks based on known cases of abuse.
- 340. There are 20 prescribed ML/TF risk control factors, that address the comprehensiveness of systems, rationality of mechanisms, technical support capability, staffing, customer identification, specific measures for highrisk customers, preservation of customer identity information and transaction records, large-value and suspicious transaction reports, measures regarding high risk businesses, AML/CFT training and publicity, internal audit and management.
- 341. The PBC conducts research on the vulnerabilities of financial institutins, particularly in their development of new products and services, and use of new delivery channels. In 2017nine research papers on new delivery channels ansix on new businesseswere produced. The financial sector in particular, including PIs, has been developing financial products such as payment systems using internetiased technology. This research feeds into the risk assessment model, which in turn is periodically updated.
- 342. Although the PBC has not developed a comprehensive supervisory strategy to address these trends, it deals with ML/TF threats associated with potential vulnerabilities by issuing Notices and Risk Warnings, notably in 2016 and 2017, on such topics as bank card fraud through selfervice machines, cardree deposits and associatedTF risk, and suspicious indicators concerning crosborder transfers. It has also issued a Notice about the risks of dealing in crypto currencies. The National Internet Finance Association Chinaissued a series of Risk Warnings about Fintech products, including Initial Coin Offerings (ICOs), crypto currencies, and small loans. As can be seen, these measures generally address threats relating to the use of technology to commit predicate offences, rather than vulnerability to ML/TF, and thus the impact of these Notices and Risk Warnings on the risk assessment of financial institutions is not clear.

- 6
- 343. The PBC also receives other information on FIs and PIs from STR data provided by CAMLMAC; criminal case convictions from the SPC; criminal investigation data provided by the MPS; and typological cases provided by LEAs at the national and local levels. However, this process does not address the low level of understanding of risks as identified in Chapter 2. Nevertheless, as a result of these efforts, there has been significant increase in the numbers of FIs designated as high risk which has implications for supervisory resources (see RisBased Supervision of Compliance with AML/CFT Requirements, below).
- 344. The information obtained by the PBC from sector regulatorson internal controls varies in utility and content. Except for the information from theinsurance sector, internal control information from the sector supervisors is not AML/CFT specific and essentially confirms that controls are in place, or otherwise. Assted the PBC itself assesses the overall quality of AML/CFT controls in FIs and PIs.
- 345. rankings for the years indicated.

classification of residual risk

#### **DNFBPSector**

- 347. The PBC has notonducted any risk assessment of individual DNFBPs (aside from trust companies). The only information available on sector risk is contained in the NRA, which rates the real estate sector as having relatively high inherent risk and medium residual risk.
- 348. In the NRA, the DPM sector is rated as having relatively high inherent and residual risk, thus implying the risk mitigation is essentially ineffectual. The legal, notarial and accounting sectors are rated as having low inherent and riesual risk. The CSP and DPS sectors are not discussed in the NRA and are unrated.
- 349. The DNFBP sector supervisors (the MOHURD, the MOF, and the MOJ) demonstrated a low level of understanding of ML/TF risk. The authorities stated that the sector supervisors are actively involved in the ML/TF risk assessment process, but no specific or detailed information was provided to demonstrate this. During meetings with DNFBPsector supervisors the PBC responded to most of the questions about the work done to date on panning for supervision in these sectors.

# RiskBased Supervision of Compliance with AML/CFT Requirements

### Financial Sector

350. The AMLB, from itsheadquarters in Beijing and through 36 locations across

352.

assessment process described under of ML/TF Risks, above, which results in aAML/CFT supervisory rating.

353. The PBC offices are stæftl according to the numbers of prefectures, provinces or counties for which they provide supervisory services, and this allocation does not always correspond to the numbers of financial institutions in these regions. However, the PBC actively manages the saignment of AML supervisors to the locations needing them. For example, the Shanghai branch, which is responsible for one of the largest financial centres in the country, only has 11 staff dedicated to AML/CFT supervision physically located in Shanghai However, PBC actively assignadditional resources to Shanghai when needed (see further discussion below enerally, the number of PBC supervisory staff is slightly higher in the four SE provinces of China, roughly corresponding to the areas of higher risknoted in the NRA. The proportion of staff per province is about 12% on average, compared to nearly 13.5% in the SE region.

354.

control processes at Fls. However, the dividing line the ween PBC and sector supervisory work is not always clear in practice, with supervisors confirming to the assessors that there are often situations where supervisory work plans overlap. This is most notable in the insurance sector (see below and also pieus section on risk assessment process). The authorities consider that, given the importance of internal controls, it is important that sector supervisors work cooperatively with the PBC where necessary to ensure internal controls are adequate. The assessmote that the support of the sector supervisors in assessing the quality of internal controls is a strength of the system.

355.

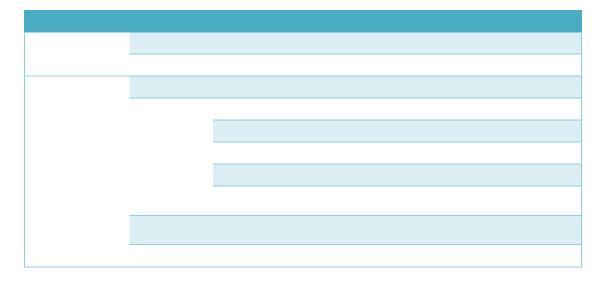

systems of insurance companies. These inspections are this mitted to internal controls but cover such elements as customer identification obligations and not reporting LVTRs and STRs, areas that mostly fall to the PBC to supervise in the other sectors. The supervisory programe of the insurance regulator is thus more attuned to ML/TF risks than those of the other financial sector regulators. The banking and securities regulators do not have a comparable approach except where the PBC requests their assistance or input. The assessors consider that similar programs enhanced support by the banking and securities regulators would further enhance the quality of AM/CFT supervisory process in the financial sector.

- 356. The PBC orsite process has two components: supervisory visits and onsite inspections. See Table below fostatistics on these two different measures between 2015 and 2017.
- PBC Supervisory Visits: these are widely used and normally result in obtaining information through questionnaires, information checking, systems inspections, and so on. The supervisory viit is essentially a lighter touch type of supervision used at FIs with lower than the maximum level of assessed risk, and at other FIs to address particular issues. The PBC uses information gathered to document AML/CFT issues and inform the issuance of gudance (see Promoting by Supervisors a Clear Understanding of AML/CFT Obligations and ML/TF Risks, below). Supervisory visits do not normally result in written findings or remedial measures directed at individual Fls. In 2017, the PBC conducted almost 7500 supervisory visits to the head offices 000+ Fls and issued a total of 421 Regulatory Opinions

after these visits.

358. On-site Inspections: The PBC AMLB, throughne HO and 36 branches, plan annual programs of onsite inspections taking into account supervisory goals, ratings, risk assessments, regulatory filings, and risk events (known instances of higher risk) during the planning process. The chief criterion is the sik rating. The principal objects of theonsite inspections are to verify that the FI has implemented customer identification, record keeping, monitoring, STR filing, and TFS name scrubbing processes.

#### (Number of Institutions)

359. Given the significance of ML threats arising from ross-border transfers and the NRA rating of the banking sector as high inherent risk, the inspection statistics in the table above indicate that the banking sector appears to be substantially nder-unts for a significant number

of inspections. As shown in this table, the ratio of inspections to the numbers of high risk banks has declined somewhat, from approximately 50% in 2015 to 47% in 2017. On the other hand, in the PI sector this ratio has impræd from 9% to 31% over the same period.

- 360. In the securities and insurance sector, the numbers of inspections exceeded the numbers of highrisk FIs, which suggests the PBC includes a higher proportion of medium and low risk entities in the inspection programs in these sectors. Generally, it is not clear what proportion of inspections in each sector apply to highisk entities, but it appears there is an imbalance in these sectors which should be addressed.
- 361. The PBC does not carry out onite inspections at foreign branches or subsidiary locations of Chinese Fls. The authorities explained that (i) these foreign locations account for less than 2% of all Fl locations and about 12% of total assets; (ii) Fls are required to report to the PBC on the AML programs to the PBC on their annual reporting to the PBC; and (iii) Fls are required to report to the PBC on

adequate to assess the risks emanating from foreign locations.

#### 362. During on-

risks associated with FinTech products, including whether newFinTech products have been subject to a risk assessment prior to being launched, and they assess the effectiveness ofthis process. This is a useful process, but it would be more beneficial if the PBC also made these risk assessments following the-site supervisory visits. This would allow the PBC to study the risk management practices adopted for these products across the financial sector, would improve the quality of information available as the PB@riorit ises FIs for supervisory activity.

#### **DNFBP Sector**

363. The PBC, accompanied by the MOHURD, the MOF, and the MOJ, have carried out a small number (53) of supervisory visits (not inspections) to DNFBPs [as defined by the FATF standards] in the real estate, accounting, legal, notarial and DPS sectors from May 2017 to June 2018. A further 105 supervisory visits were made to various other firms, mostly tax firms and pawnbrokers. It is worth noting that none of these other types of firms was included in the purported July 2018 designation of DNFBPs referred to above. The objectives of these visits were mainly to acquaint industry participants with potential AML/CFT obligations and possible proposals for future supervision, as part of the process of discussing future supervision with the sector

ators were in a position to

enforce AML/CFT obligations before the purported July 2018 Notice was issued.

364.

established AML internal control frameworks and set up reporting procedures to process STRs and LVTRs. Again, however, it is not clear how these internal controls and procedures could be evaluated given the lack of enforceable measures in the sector. The competent authorities did not provide any statistics on these control frameworks or processes, or which DNFBPs had established them. Accordingly, the assessors conclude that there has been no AML/CFT inspection of the DNFBP sectors (aside from trust companies and the DPM).

365. In summary, although the concept of riskbased supervision seems to be understood by the PBC, the extent of its understanding of ML/TF risks (see

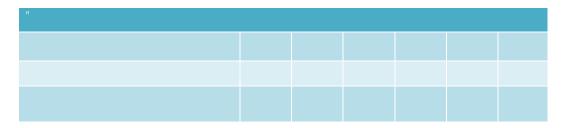

allocation of inspection resources is entirely aimed at the financial sector and is predo own risk assessments and a process that assesses the general quality of internal control measures. Moreover, the growth in numbers of high risk FIs is outpacing the efforts of the PBC to inspect these FIs. DNFBP spervision for AML/CFT obligations was essentially norexistent since measures did not apply to these sectors (aside from trust companies and DPMs). As a result, the adequacy of the overall results of the supervisory process in mitigating the ML/TF risks in China is questionable.

# Remedial Actions and Effective, Proportionate, and Dissuasive Sanctions

- 366. PBC and the sectoregulators have a range of supervisory remedial measures and financial sanctions available for the financial sector.
- 367. Remedial Measures: The '‡"~(•'") 'cfollowirág supervisory visits, setting out identified issues and requiring the financial sector to implement within a specified time limit. Following inspection visits, individual FIs are required to develop specific remediation plans, implement the plans, and improve AML/CFT work in aspect of organisational structure, investment of resources, internal control mechanisms, and system improvements. The PBC regularly reviews the status of remediation, hears reports from the seior executives, and guides the follow-up work. If the FI fails to comply by the deadline, more intensive measures and/or financial sanctions are available. Remedial measures, when completed, must be reported to the supervisor. Progress (or lack of it) is factor in the ratings system described above and in supervisory strategy going forward. Remedial measures applied by PBC are always accompanied by a financial penalty.
- 368. Financial Sanctions: Financial penalties available to PBC for violations of the AML Law are as set out in the TCA

According to the authorities, the amount of the assessed penalty is based on the number and degree of severity of violations. China also follows a policy of assessing additional financial penalties against members of the boards of directors or senior management considered responsible for the violations of the FI legal entities.

369. The table below sets out statistics on the numbers of FIs and related individuals that were subject to financial sanctions applied by the PBC in the table per indicated.

370. Banks penalized by the PBC underhe AML Lawrepresented about 6% of all banks in China in 2017. In 2017, of the 255 FIs that were financially penalid, 157

were mostly residually high-risk small- and medium-sized urban commercial banks, rural commercial banks, rural credit cooperatives and rural banks. Although these banks offer services assessed as relatively highs by the NRA, their smaller scale of business coupled with weaker contros makesthem residually higher risk. As a result, more issues were identified in onsite inspections, and thus the proportion of penalties was higher. In 2017, the penalized number of such banking institutions amounted to 61% of the banking sector and the aggregate penalties amounted to 57% of all penalties in the sector.

- 371. For 2016 and 2017, China applied an aggregate of RMB 48.7 limit in financial penalties to 19 out of the 24 Fls directly supervised by PBC HO, or an average of about RMB 2.6 million each. The largest penalty (RMB 7.9 million) was applied to the largest bank in China for infractions found at 26 locations. As of the do June assets were RMB 8.5 million, total deposit balances were
- RMB7.8 trillion and total loans portfolio amounted to RMB 3.3trillion. This size of penalty applied to such a large bank for extensive systemic violations at 26fices seems minor and not dissuasive.
- 372. As noted above, the sector financial supervisors cannot apply financial penalties for violations of the AML Lawbut can apply sector penalties for weaknesses in internal controls. According to available statistics since 2015, the former CBRC has imposed 48 penalties and fined financial institutions an aggregate of RMB 22.3 million for failure to implement internal control requirements. A total of 23 institutions were penalized, 6 were also ordered to sanction 25 resonsible personnel of whom 8 were removed from their posts and 3 were prohibited from engaging in the banking industry for life. The average penalty per FI was slightly less than RMB 1 million (approx. USD160 000). Again, in a sector which features veryarge banks, this average size of penalty seems minor and not dissuasive. No information is available on the relative level of ML/TF risk in these FIs.
- 373. The CIRC applied financial penalties to two insurance companies in 2017, but the amounts and violations were not available. In 2016, CSRC imposed administrative penalties on four institutions aggregating RMB 240 million.
- 374. As can be seen from the table above, the overall volume of financial penalties applied by the PBC is growing. The authorities attribute the growth to the impact of new regulatory obligations, better targeting of inspections to higherisk entities and better inspection methodology leading to more issues being identified by PBC.

However, the low levels of penalties available (see TC Analysis) eans that in order to have dissuasiveness keep pace with grath in risk levels, the supervisory have to expand the scope of their work in order to find violations that will generate a sufficiently large penalty.

- 375. In summary, the assessors believe that ALMCFT financial penalties available, as applied by PBC and averaging about RMB 41 million per year (approx. UESD million) are not effective, dissuasive, nor proportionate given the overall size of the financial sector, the scale of the major banks and oth FIs in the financial sector, and the lack of initial responses to remedial measures. Further, although the sector supervisors can and do apply sector financial penalties for internal control weaknesses, these penalties are not necessarily AML/CF-Telated and apply for broader issues that may or may not have a direct link to AML/CFT compliance.
- 376. No AML/CFT remedial actions or sanctions haveen applied to online lending institutions.

#### **DNFBPs**

377. No AML/CFTremedial actions or sanctions have been applied to DTBPs.

#### Impact of Supervisor Actions on Compliance

378. The PBC demonstrated that its ris/based approach to AML/CFT supervision

ntrols applicable to implementing

AML/CFT measures. The overall impact of supervision on compliance by the financial sector seems to be moderate and declining. This conclusion is based on the following factors: (i) the rapid growth in the number of highrisk FIs which is outpacing increases in numbers of inspections; (ii) increasing remedial measures required of, and financial penalties handed out to, FIs and individuals in the financial sector between 2012 and 2017; (iii) the lack of dissuasiveness of fimeial penalties as discussed above; (vi) the low to moderate level of ML/TF risk understanding demonstrated by the financial sector during the orsite visit (see Preventive Measures); and (v) the lack of AML/CFT sanctions in the DNFBP sector.

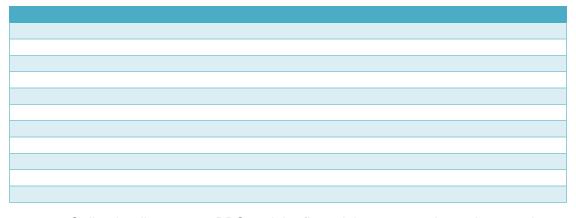

379. For example,between 2012 and 2017 the number of FIs that were sanctioned by the PBC for violations of the AML Lawgrew from 83 in 2012 to 429 in 2017, over a 400% increase. Over the same period, the number of site inspection

380. Sector Supervisors: Except for the insurance supervisor, the sector supervisors have a low to moderate impact on AML/CFT compliance, due to their supporting role that is limited to verifying the existence of general internal controls and their inability to apply financial sanctions for AML/CFT violations. Their

oriented to prudential supervision. The insurance supervisor carries out its own assessment of internal controls relevant to ML/TF in insurancecompanies. The

cannot apply financial penalties for AML/CFT deficiencies, and remedial measures applied were negligible and not directly related to supporting AML/CFT controls.

- 381. Despite the increasing use of financial penalties, the overall levels of compliance behavior by Fls have not changed significantly and some respects has worsened. For example, there has been steady growth in the number of sanctions for issues relating to BO, growing from 57 in 2015 to 119 in 2017. The authorities attribute most of this increase to noncompliance issues relating to the identification of beneficial owners, introduced underRegulation 235n 2017.
- 382. Since 2015, the 22 largest FIs in Chain(including the two largest PIs) had spent in excess of RMB0 billion on human resources, systems, training and other services to improve their AML/CFT controls as a direct result of remedial actions taken by PBC.
- 383. The following table sets out statisticson deficiencies identified by PBC related to weaknesses in management of ML/TF risks associated wiffinTech products in AML inspections from 2015 to 2018. As can be seen there has been a steadylide in the number of issues, suggesting that the impact o sector relating to FinTech products has achieved positive results.

384. Online lending sector: PBC and the financial sector regulators have no impact on the online lending sector as these entities are only subject to local municipal registration and not to AML/CFT supervision by PBC. The online ending sector

notwithstanding that the AML Lawdoes not apply to online lenders. Despite this, however, no inspections in this sector have beerconducted by PBC (see abov@able on Statistics of Various Supervision Measures Conducted at FIs by the). PBC

# **DNFBPs**

385. PBC and sectorregulators/SROs had little to no impact on compliance by DNFBPs. The authorities asserted to the assessors that in practice, the PBC collaborated with sector regulators to conduct AML/CFT supervision on DNFBPs in the real estate, DPM, and accountant sectothrough issuing variousNotices These Noticessimply highlighted high-level expectations but did not applythe AML Lawto these sectors. As noted above, by June 2018 the PBC had carried out supervisory visits (which do not result in remedial measures bing required see discussion under financial sector above) at 53 DNFBPs and had conducted risk assessments of 11 institutions. Various enquiries and training sessions were also provided. It is clear to the assessors that these actions did not constitute the indicated of supervisory activity defined by the FATF under R.28.

386. It is not clear why the AML Law regulators in AML/CFT supervision by the PBC. What little information is available suggests that the PBC has done **ary** small amount of work in the DNFBP sector such as some visits and a few risk assessments in various areas of China to gain an understanding of ML/TF risks.

# Promoting aclear understanding of AML/CFT Obligations and ML/TF Risks

387. The PBC conducts a guidage publishing strategy that is designed to bring to

that guidance improved the ability of FIs to identify risk and raised AML/CFT awareness among senior executives and sfaHowever, the assessors noted a low to moderate level of understanding of ML/TF risk in the financial sector (see IO.4 discussion). As noted above RA Guidelinevas issued in 2013 but had not been updated by the time of the orisite visit. Further, although there is guidance on CDD measures, it mostly addresses customer identification issues and information linking suspicious activity to predicate offences generating illicit proceeds. This type of guidance may be effective at improving the ability of ls to satisfy basic obligations and file useful STRs but does not appear to be aimed at more complex or sophisticated improvements needed in internal controls and CDD obligations, especially in larger FIs.

- 388. Important PBC guidance is issued by PBC Head Off(tHO), including that relating to customer identification and suspicious transaction reporting. In addition, Supervisory Opinions considered guidance and are published as such. PBC guidance strategy is, to a considerable extent, executed by branchets (guidance is normally linked to local issues and risks) after reporting the proposed guidance to PBC HO for review and approval. The authorities have confirmed that this process prevents PBC branches from issuing potentially conflicting guidance.
- 389. Sector supervisors also issue guidance, mostly on internal controls. Although these are helpful, and address specific internal controls upporting compliance with AML/CFT obligations, they do not address compliance issues under the AML/CFT law; however, the authorities confirmed that the sector supervisors do consult with the PBC before issuing such guidance to ensure that there is no conflict with regulations.
- 390. Official Replies: The PBC regularly issues what amount to interpretation bulletins to FIs that request assistance in understanding their obligations. More than 80 of these official replies had been issued at the time of the onsite assessment.
- 391. Risk Warnings: The PBC regularly holds briefings for FIs and sector regulators, issues analysis reports on ML/TFtypologies, the types of crimes that are mainly

CHAPTER 6.	SUPERVISIOM53

# jF jj dih ta

# **Key Findings**

- a) Basic (or legal) ownership information is collected and publicly available on the internet for all types of legal entities, although the information is not always accurate, and it seems relatively easy to circumvent the registration rules (for example through straw persons).
- b) BO information of legal entities (domestic or foreign) is not (publicly) available in China. Authorities make use of available basic informatioCDD information collected by FIs, and law enforcement powers to obtain such information. Each of these sources poses shortcomings and significant challenges, and the combination of measures at the current stage falls fundamentally short of what an effective system for obtaining accurate, adequate and current BO information in a timely manner would look like. Basic legal ownership or shareholder information may in practice in some cases be the same as the BO information, but the concepts are fundamentally different, and authorities should not rely on basic legal information as an alternative measure to identify the BO. That said, authorities have already initiated plans and measures that may improve effectiveness in the future.
- c) There is no granular understanding of the ML/TF risks of each type of legal person, and the risk classification that has been produced for the purposes of the NRA focuses on control measures related to technical compliance. Some of the findings of this risk assessment are also not provided by the risk scoping for this assessment, are inconsistent with other government policies (such as the national anticorruption drive) and are inconsistent with case examples provided to the assessors (which highlight incomplete basic information and lack of BO information as the main vulnerability).
- d) The Trust Law provides for the creation of domestic civil trusts. No measures have been taken to mitigate the misuse of domestic trusts, although the lack of a regulatory framework for civil trusts is **a** impediment to its use and as such can be considered a mitigating measure in itself. Foreign legal arrangements (i.e., foreign trusts) operate in China, such as the legal or beneficial owner of a Chinese legal company. Authorities have been able to identify foreign trusts that operate in China.

#### **Recommended Actions**

- a) Short of requiring all BO information to be registered directly with, for example, SAMR (which would be the relatively most straightforward solution), authorities must continue to take other meaures to ensure that adequate, accurate and current BO information is obtained in a timely manner. This includes continuing to require FIs to collect and verify BO information, and improve compliance with these requirements. The PBCs proposed BO register or information collected by FIs could also assist in achieving effectiveness in this regard. Authorities should no longer treat basic legal or shareholder information as an alternative to BO information.
- b) Authorities need to improve the accuracy of basic **fo**rmation available in the public registers, as collected by SAMR, among other reasons to better prevent against front companies. This should include stricter verification and enforcement of registration requirements. This should also include widening the when breaches are detected (in addition to the focus on the natural persons involved with the abuse).
- c) Authorities need to improve their understanding of the risks of legal persons by undertaking a more granular risk assessment for each type of legal person, rely less on existing control measures, and that takes into account a broader range of existing risks that may impact legal persons.
- d) Authorities should take additional measures to preventhe misuse of legal persons, including an increased focus on complex schemes to abuse legal persons and hide BO during financial investigations (without losing the current focus on abuse through front companies).
- e) Authorities need to take further measuresto abolish, dematerialize, or register bearer shares.
- f) Authorities should consider reviewing the current legal basis for the creation of domestic trusts, in view of the uncertainty that it creates
- 398. The relevant Immediate Outcome considered and ssessed this chapter is IO.5. The recommendations relevant for the assessment of effectiveness under this section are R.24 and 25.

#### **HARRY**

# Overview of the Types of Legal Persons and Arrangements

#### Legal Persons

399. Company law is subject to continuous development since the policy of economic openingup started in 1978, and the changes are still ongoing. As is set out in Chapter 1, the Civil Law is somewhat open ended in this regard, as it defines for

n	rofit
ν	IOIIL

tax departments. As part of this process, some of the basic information provided during the setting-up process needs to be resubmitted to these authorities. There are some additional steps to be taken for legal persons with foreign ownership.

403. In recent years, the State Administration for Market Regulation S(AMR, formerly the State Administration for Industry and Commerce) has modernized and decentralised its part of the registration process, by providing facilities for online registration. Other authorities that can be involved in the registration process include the MPS, the PBC, the tax authority and the social security administration. Authorities stated that there are no regionabdifferences regarding the requirements for any type of legal person or market entity. Authorities indicated that official websites of authorities such as the State Councis AMR and the MCA have promulgated laws and regulations that specify the detailed procedures for setting up each type of legal person, and these laws are posted eline.

### Legal Arrangements

404. As outlined above, the law provides for the existence of civil trusts, but there is no further regulatory framework.

Identification, Assessmentand Understanding of ML/TF Risks and Vulnerabilities of Legal Entities

405.

legal persons is set out in the NRA and in more detail in an annex to the NRA. The focus of the NRAis on the rules and control measures that are in place for each type of entity, and there is little information on threats and vulnerabilities. Without such information, the risk classification that is included is difficult to understand. This especially concerns the classification of state owned companies as lowisk. This is inconsistent with the many known corruption cases that originate from state owned companies, and with the priority that the government is giving to cracking own on such corruption. The same applies to other types of statelinked entities that are considered low-risk. Authorities explained the classification of state owned companies as low risk due to the fact that these are initially not set with an aim to be abused for crime, which is possibility for other types of legal persons. Assessors note that this does not take into account that existing state owned companies are being misused for crime and money laundering, which is a major risk.

406. However, competent authorities and private sectorepresentatives that the assessment team met with had a consistent view of the mainulnerability that China faces, which is the misuse of legal entities through setting front companies (in the NRA also referred to as shell companies) to commit fraudind other crimes. The authorities also identified the unavailability of BO information and lack of complete basic information as important vulnerabilities. Authorities note that BO is a very recent concept in China, and that only FIs are required to collecuch information. The NRA also notes that most banks do not carry out checks of ownership, in the absence of regulatory requirements.

407. Authorities provided a large number of case examples of misuse of legal persons. Some cases were more complicated, including with foreign ownership structures. The majority of cases concern rather straightforward use of front companies, setup or acquired specifically to commit crimes. More often than not, these cases seem to involve a registered contact person who appetors a straw person, which is in line with the observation that basic information is not always available or accurate (see below on enforcement). The detection of such cases happens as part of law enforcement action at the investigative stage. Regionally la enforcement authorities that met with the assessment team explained that they are able to locate the beneficiary of these front companies through following the money trail from the company, which from examples provided seemed to be the immediate recipient of the funds. This type of abuse does not seem to require more complicated structures with beneficial owners that are further removed from the abused company.

408. Law enforcement did not appreciate the need for having access to BO information, even for chairs of BO with offshore links. It may be that law enforcement does not search for such cases or does not further investigate financial trails beyond the beneficiary. However, considering that registered basic information is not necessarily accurate or complæ and that BO information is only available through FIs (if at all), criminals and terrorists in China may not need to make as much use of complicated structures to hide and channel their illicit assets.

<sup>56</sup> See also on IO.11 for front companies in relation to the financing of proliferation.

also provided case examples where financial services were not provided due to a lack of BO information (for various reasons).<sup>79</sup>

#### Legal Arrangements

412. No specific mitigating measures have been taken in relation to civil trusts although the lack of specific regulations may be a mitigating measure in itself as it discourages the use of civil trusts. For foreign legal arrangements operating in ioa, there are no specific mitigation measures beyond CDD rules in #Othat require the identification of a trust.

Timely Access to Adequate, Accurate and Current Basic and Beneficial Ownership Information on Legal Persons

- 413. China aims to use a combination mechanisms to gain access to basic and BO information. However, there are important shortcomings with each mechanism.
- The first mechanism is to use basic registered information to find the legal owner or shareholder of a legal entity. This mechanism is only useful to identify the BO in cases where the legal owner or shareholder and the BO are the same, but the registered information itself will not indicate if the registered legal owner or shareholders are indeed the BO. That said, basic registered information can be a starting point to identify BO information, and accessing this information poses no problems whatsoever. hformation is publicly available through the National Enterprise Credit Information Publicly System (NECIPS), and through commercial parties. However, the registered basic information is limited to the information that is required to be collected by SAMRned the accuracy depends on verification at the registration stage, and when information is changing. Authorities provided good examples of the use of the system, but a review of the publicly accessible registers by the assessment team also indicated the formation can belimited to the name of the company and the name and address of the contact person for the legal person. The number of breaches and the relative ease to set up front companies also provide an indication that the effective implementation ofthis system requires improvements.
- 415. The second mechanism that authorities use is BO information available elsewhere, including through CDD measures. As noted above, while a potentially good

See also on IO.11 for frontompanies in relation to the financing of proliferation.

"

mitigation measure, the implementation of these CDD measures isotoecent to be considered effective at this stage (as noted as well in the NRAThe third mechanism is through the use of law enforcement powers, either to gain access to the information held by the legal person (but note that legal persons are not required to hold such BO information) and/or their representative (who is also not required to hold such BO information). As has been elaborated in other assessment reports, the use of law enforcement powers poses unique challenges to effective implementationathcan be a fundamental barrier to achieve effective compliance. Not limited to the fact that law enforcement will have to find the BO information not knowing beforehand if it exists and where it is available. This also negatively impacts the timeless of access to the BO information.

Timely Access to Adequate, Accurate and Current Basic and Beneficial Ownership Information on Legal Arrangements

416. No adequate, accurate, and current basic and BO information has been shown to exist for legal arrangements (civil trusts), mitigated by the potentially limited existence of such domestic civil trust. For foreign legal arrangements operating in China, there are no specific sources of information beyond BO information collected by FIs, which poses the same issues aerfBO sbeen n b

registrations. In comparison, of the nine million listed legal entities, about seven million were listed for not submitting annual reports, and more than one million because the legal person could not be contacted through the listed contact person even by the authorities. As far as risks of abuse of legal entities is concerned, one would expect that the lack of filing of an annual report and the lack of a contact person would be major red flags for the authorities to further pursue especiallyin light of front companies as a major vulnerability. However, authorities have not demonstrated that they indeed followup on such cases. Also, a listing for breach of requirements does not necessarily lead to a sanction of the legal person.

- 418. Since 2015,40 competent authorities coordinate at the policy level to address misuse of legal entities, each with a focus on compliance in their respective area. As a result, legal persons that have breached too many requirements by too many competent authorities can be listed as dishonest legal entities. To date, 958 legal persons have been listed as such, but not for breaching BO information.
- 419. Overall, it appears that the rate of detection of misuse of legal persons is low. Authorities have indicated their priority is to pursue criminal charges against the natural persons in charge of legal entities. This can be explained by some of the provisions in the Oriminal Law, which include sanctions for management and staff of legal entities for the wrongdoing of these legal entities. The sanctions for natural persons are also higher than the comparatively low monetary sanctions available to sanction legal persons.

#### Legal Arrangements

420. No information is available on sanctions regarding domestic civil trusts, a deficiency that is mitigated by the potentially limited existence of such domestic civil trusts. Likewise for foreign legal arrangements operating in China.

#### Overall Confusions on 05

421.

# Key Findings

a) China has a largely compliant legal framework for international co

- d) China should align its MLA requests with geographic ML/TF risks.
- e) China should ensure that it can provide adequate and timely BO information.
- 422. The relevant Immediate Outcome considered and assessedt**in** chapter is IO.2. The recommendations relevant for the assessment of effectiveness under this section are R.3640.

**H** 

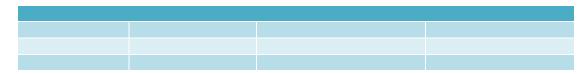

423. As recognised by the authorities in the NRA, illicit proceeds are often transferred overseas, for example through the use of bank cards, underground banks, cross-border transportation of cash, and splitting of foreign exchange purchases (see also Chapter 1 and IO.1). The international context increases the importance of international co-operation as a risk mitigation measure. The coverage of these risks in the NRA and the results of the interviewswith authorities during the on-site indicate that authorities understand these risks.

# Providing Constructive and Timely MLA and Extradition

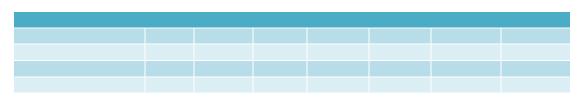

- 424. China has a legal and procedural framework for international coperation and assistance, but it has complicated procedures. The MOJ is the leading central authority for accepting, reviewing and transferring MLA requests. China has provided MLA in a timely mannerin some cases, but due to oftenomplicated decision-making structures regarding the provision of the MLA, providing assistance in practice often takes a long time. Feedback on international experation with China received from the global network was varied. There was some positive feedback and good examples of co-operation, but a number of countries expressed concern with respect to and delays and lack of responses by China for which no valid explanations were provided
- 425. China does not have one central abbrity dealing with MLA requests. This is due, in part to the absence of MLA law and the decentralised nature of the system. While the MOJ is the leading agency, MPS and GPP are also central authorities certain treaties and UN conventions. China categorizes MLA into two groups based on whether there has been a treaty on criminal legal assistance or not. In China, there are authorities receiving requests but sending them for execution to other authorities as well as authorities receiving and executing requests, and the execution can be at the central level or done by local branches.

- "
- "
- "
  - 8'

- 426. China has established a multichannel method of carryingout international cooperation:
  - x the MOJ is one of the authorities or the MLA requests underthe Palermo Convention and when it is mentioned as such in agreements and treaties signed by China;
  - x the MPS is the other authority undethe Palermo Conventioand in a number of bilateral treaties and agreements;
  - x the MFA is thechannel for the Vienna Convention and extradition requests and
     MLA in the absence of an agreement; and
  - x the

430. Similar statistics were presented for other ministries involved in MLA. In general, the figures for MLA received show that more than half of all requests are received by China through the MOJ.

- 431. China, considering that different ministries (including local authorities) can execute MLA requests from abroad, developed general agencyspecific provisions, notices, and guidance on how to handle judicial legal assistance. It is a positive measure because many requests are executed at the provincial level, and those branches have a need for additional guidance when they receive those requests from the central offices for execution.
- 432. China provides a range of assistance to MLA requests relating to threvision of documents, witness statements and asset recovery, including the identification, tracing and freezing of proceeds from foreign predicate offences. The legal provision requires China to initiate pro forma domestic investigations or procedures another a Chinese court decision to enable the full range of freezing and confiscation powers available domestically. Challenges in relation to the confiscation of assets were noted by a few countries in the global network responding to the survey on interational cooperation.
- 433. The table below shows the type of actio foreign countries request from China (through the MFA), 19 of them (around 5% involved ML, and one was related to TF offences.

434. And the procedure for extradition is different from the procedure for MLA requests. After the MFA receives the request, the SPC examines whether the request is in conformity with the provisions of the Extradition Lawand extradition treaties. In practice,

Court.

8

1

,

437. The following example demonstrates how the extradition system works in practice in China. The process is too lengthy and can take several years. Although it should be noted that on several occasions the extradition process was completed within one year.

In June 2014, Japan requested China totaedite and detain Y, a Brazilian criminal suspect. Japan subsequently submitted a formal extradition request in July 2014. The MFA, after examination, requested supplementary materials. After Japan provided the materials, the Supreme People's Court reviewed the case and decided that the case met the conditions for extradition as stipulated under the Extradition Law Japan accused Y of forgery and use of printed personal documents for defrauding. In May 2016, the State Council decided to grant extraditionThe MFA notified Japan on June 2, 2016.

In June 2016 Japan submitted new evidence, requesting China to agree to additional crimes that Japan charged Y with, after the extradition was decided (robbery and homicide). The Supreme Court reported its decision to the State Council, and China agreed to this request and notified Japan of the decision on January 9, 2017. On January 25, 2017, China extradited Y to Japan. This case is useful to understand the lengthy extradition procedure, even if the case does notivolve ML/TF

# Seeking Timely Legal Assistance to Pursue Domestic associated predicates and Trassational Elements

438. China does not make frequent use of the official MLA mechanisms apart from extradition issues. But it uses other possibilities to achievthe needed results, which was demonstrated to the assessment team. These cases are different from extradition cases. T

conduct with other countries (see the box below). No ML cases were involved in these operations.

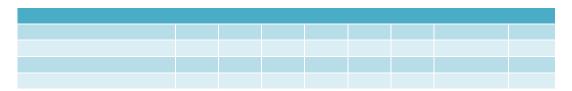

To further combat corruption and economic crimes, China has launched various special operations. For example, the Central Commission for

carried out special operations related to international fugitive repatriation and asset recovery on corruptionrelated crimes, and the MPS launched

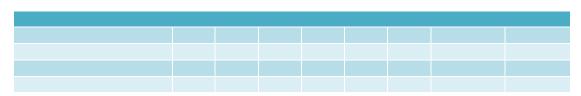

2016, 2566 individuals who had

previously fled China wee recaptured from 90 countries and total asset of RMB 8.6 billion (approx. USD 1.3 billion) were recovered. In 2015, Interpol China National Central Bureau released a 100 fugitives list (Red Notice) of persons involved in corruption cases. By the end of 26, 43 out of 100 individuals were caught

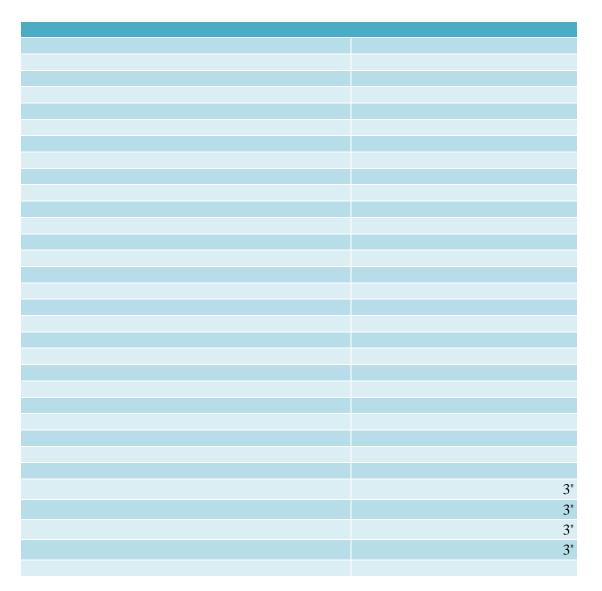

439. The statistics on seeking MLA had been presented only by the MOJ. From the figures for MLA requests related to ML it is lear that China mainly pursues predicate offences and considers ML as a continuation of the redicate offence so ideally China should use the MLA for ML more often.

440. When there are no treaties or agreements between China and another country, the MLA requests are sent through the MFA via diplomatic channels. From 2012 to 2016, China senabout 20 MLA requests through diplomatic channels. The overall number of MLA requests is low in comparison with the crime statistics.

441. China makes extradition requests in accordance witthe Extradition Lawand bilateral extradition treaties. To request an extradition, the relevant local departments submit a written statement with relevant documents and materials as well as certified translations through its own central body (i.e.the SPC, the SPP, the MPS, the MNS or the MOJ. After approval of the request, the MFA initiates the extradition request to a foreign country. China provided overall figures for requesting extradition. In total 103 requests were sent to 34 countries since 2012These requests refer to predicate offences. The below table shows that the crimes China requests extradition for, do not match its risk areasand only 2% of the requests are related to ML

- 442. China actively pursues fugitive criminals by trying to obtain extradition from other countries. It does not stop at sending extradition requests but organises visits to the relevant countries, uses INTERPOL channels, joint operations and other means.
- 443. Overall, analysis of the information and data presented by the country shows that China is seeking MLA/extradition related to transnational ML/TF cass to a lesser extent than wo

  The majority of cooperation it seeks is related to predicate offeces.

# Seekingand ProvidingOther Forms of International Coperation for AML/CFT Purposes

444. The Chinese authorities regularly seek other forms of interational cooperation to exchange financial intelligence, law enforcement upervisory, and other information with foreign counterparts, including for AML/CFT purposes. This exchange of information operates at an operational level and has led to some tarter results.

# The Financial Intelligence Unit (CAMLMAC, AMLB, PBC Branches)

445. CAMLMAC is responsible for receiving analysing, and transferring financial intelligence, signing bilateral memorandums of understanding MOUs) on AML/CFT intelligence exchanges and co-operation or similar documents (agreements) with counterparts of other countries. CAMLMAC exchanges information with foreign counterparts, even though it is not an Egmon proup member. It has signed 52 MOUs with foreign FIUs. That deficiency is partially addressed by signing the MOUs with FIUs with which the exchange of information is primarily needed. This exchange of information is mostly based on the requests from abroad and to a much lesser extent on the requests from China to other FIUs (due to a sath number of ML/TF investigations). The below tables clearly show that difference. The Chinese

446. As figures in the tables show, the number of requests is very low in the light of the size of the country and its economy, another importantly, the number of STRs received and the volume of financial analysis. Moreover, comparison with the number of requests for financial information from other FIUs shows that China sends approximately one request to 30 or 40 requests received. That demonstrates that the channel of obtaining financial information from other FIUs is practically not used, even though transnational financial flows are very large in volume and the risk of laundering proceeds from domestic predicate crimes abroad is bin. It appears that the FIU is not using actively the possibilities provided by 52 MOUs signed by China. International co-operation feedback from other jurisdictions indicated mixed experiences. Whereas the SARs and some FIUs from Assacific countries indicated satisfaction regarding the quality of cooperation with China, some other FIUs indicated that co-operation was formalistic and that responses were not always given and, in some cases, where they were given, they lacked substance.

447. Two-thirds of the outgoing requests are to SARs of China, Hong Kon@hina and Macau, China This is not consistentwith the geography of cases investigated and pursued by LEAs, including those involving predicate offenes with large criminal proceeds.

Q, former director of a branch of a city office, was placed on file by the Anti Corruption Department of the Procuratorate on suspicion of mebezzlement and misappropriation of public funds. He fled abroad in 2011. He was placed on the Red Notice by Interpol in November 2011.

In May 2015, Singapore FIU shared intelligence with the CAMLAC which stated that Qheld multiple bank accounts, investment accounts, home loan accounts and credit card accounts at a Bank of Singapore and was a BO of a company and a fund in the British Virgin Islands. Based on the information shared by Singapore, CAMLMAC analysed over07accounts and over 270 000 large-value and suspicious transaction records, and identified the

funds were closely related to the accounts of Y and W who were suspected of operating underground banks. The fundflow transaction chart indicated characteristics of operating underground banks. The CAMMAC disseminated the analysis results and spontaneous dissemination information from the foreign FIU to the LEAs.

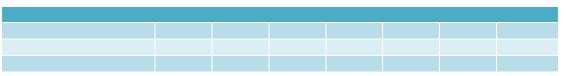

The LEAs discovered that that applied for and obtained shouse mortgage with a bank abroad. In May 2018, LEAs filed an international investigation with foreign FIU through the CAMIMAC, and obtained information on the address, owners and pledge of the house Q purchased using the house mortgage.

Since Q and his exwife Z were under investigation of the U.S. LEAs, the Chinese LEAs provided intelligence and evidence to supporte U.S. investigation. U.S. prosecutors filed formal charges agains Q and his exwife, Z, for and immigration fraud. The prosecutors

the properties to be seized were purchased with money embezzled \( \Omega \) Z will face imprisonment up to five years.

#### Law Enforcement Authorities

448. LEAs seek informal international cooperation in a wide range of cases, as a rule related to predicate offences and most of all in corruption cases. In addition to the usual MLA channels, LEAs use INTERPOL, liaisofficers, and joint operations as avenues for international cooperation, especially when seeking the return of funds or fugitive criminals to the country. However, the instances when these mechanisms have been used in relation to ML/TF are quite limited Any execution of foreign requests at the level of provinces happens in accordance with instructions from the central authorities when they send a request to a provincial branch.

- 449. The exchange of information through Interpol is many times more intensive than MLA.On average, between 2012 and 2017, 9% those requests have involved money laundering. At the same time, the number of requests sent by China is around 15% of those received from foreign countries through Interpol, which also signals that China does not make sufficient use of informatio-operation channels.
- 450. The MPS established close experation relationships with 113 countries, established 129 bilateral and multilateral cooperation mechanisms,96 liaison hotlines, sent 72 police liaison officers to 35 countries and signed nearly 400 co operation documents with the police departments of more than 70 countries. The MPS generally collects information directly through these channels and police liaison officers, which seems to be efficient and quick.
- 451. Police representatives demonstrated that the requests they are sending abroad are in line with the risks defined in the NRA; however, it does not fully match the risks as viewed by the assessment team (see Chapter 1). Authorities were also unable to demonstrate a focus on ML or TF
- 452. Most of the Chinese police requests relate to predicate offences, the MPS does not focus on ML or TF in international cooperation. The MSS is dealing with terrorism issues but authorities were unable to provide any information on TF to prove effectiveness, citingconfidentiality of data.

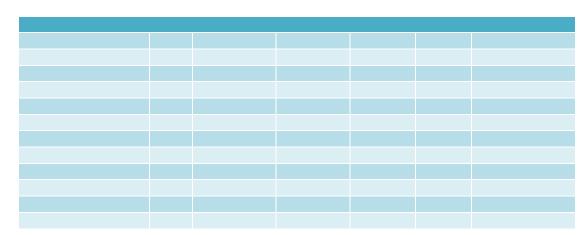

#### Customs, Tax and Supervisory Authorities

453. Customs, Tax and Supervisory authorities actively engage in international-co operation. For example, in 2017, China Customs carried out more than 1,000 intelligence exchanges with foreign coutries, handled 329 requests of investigation assistance, and carried out international (regional) law enforcement coperation in 99 cases on behalf of the AntSmugglingBureau of the General Administration of Customs. The CBRC carries out regular contations with foreign regulatory authorities. Exchange of information has taken place on establishment of banks and reviewing the qualifications of senior executives. From 20122016, the CSRC sent out 51 requests for foreign regulatory information. However, these authorities did not engage with ML or TFrelated cases or exchange of information with foreign counterparts for those purposes.

# Providing Other Forms of International Goperation for AML/CFT Purposes

#### Financial Intelligence Unit (CAMLMAC, AMLB, PBC Branches)

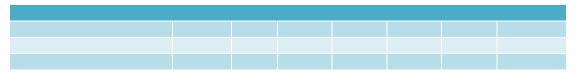

454. For financial intelligence requests received from overseas, CAMLMAC will assess the urgency of the requestConsideration is given to whether the request may

455. The two tables above demonstrate that the number of responses is significantly lower than the number of requests received by China. That is an issue of concern for the effectiveness of the international exchange of information, although the Chinese authorities explain that much of the needed information can be obtained inside the country, which diminishes the need for requesting other countries. That explanation needs to be reviewed by the authorities. Moreover, the feedback from some countries on their experience in the exchange of information mentions that Chinese FIU only provides information already available in its datase (which limits the quantity and quality of the data provided).

# Law Enforcement Agencies

456. The below table shows the overall situation with the MPS assisting foreign police investigations in recent years. Of these, the United States, Canada, and Australia submit average 230, 100, and 80 investigation requests respectively per year.

457. In general, the police in China coperate through different channels, not only through answering to requests, but they pay much attention to operational contacts and joint events and investigations. However, the figures shown above relate to all cases of coperation, not just ML or TF, witch China has not provided.

## Customs, Tax and Supervisorythorities

458. In 2017, the Anti-Smuggling Bureau of the General Administration of Customs processed 225 requests including administrative mutual assistance, case investigation and criminal legal assistance, for overseas law enforcement authorities, completed 40 criminal compulsory measures reports. There were 34 occasions from 2012 to 2016, in which regulatory information was provided to foreign countries. Regarding the followup measures of requests, only one request was rejected in 2016, and the acceptance rate was 99%. However, none of the cooperation concerned AML/CFT.

International Exchange of Basic and Beneficial Ownership Information of Legal Persons and Arrangements

459. BO information is not easily and quickly available, except in cases when law enforcement happens to be able to detect the beneficial owner using ercive powers, or shareholder information of publicly traded compder rrm

This annex provides a detailed analysis of the level of compliance with the FATF 40 Recommendations in their numerological ordeve04c4 (pl)1ET Q 3.996 withlynt

working group formed in 2016 under the leadership of the PBC which included representatives from each agency member of the AMLJMC; SRBs, including the Internet Finance Association of China, the All China Lawyers Assistion, the Chinese Institute of Certified Public Accountants (CICPA), and the China Notary Association, as well as AML egulated institutions from the banking, securities, and insurance sectors as well as norbanking payment institutions.

Criterion 1.3 In August 2017, the General Office of the State Coundissued the Opinion on Strengthening the Supervisory Framework and Mechanism for-Motiney Laundering, Countering the Financing of Terrorism and Arthax Evasion (State Council GAD Letter No. [201784)

analysis system shall be optimized constantlyand the risk prevention system shall be improved, aiming at controlling the risk of money laundering, terrorist financing

an annual AML/CFT National Threat Assessment.

Criterion 1.4 Electronic copies of the NRA were sent to government department and the major financial institutions. Smaller Fls and other regulated entities are provided copies through their local PBC branches. The NRA was also distributed to industry association bodies where it is available to DNFBPs. This distribution method has also been used to distribute the Annual National Threat Assessments with a summary version posted on the PBC website.

Criterion 1.5

measures can be taken, except for customers matching a number of highst scenarios.

Criterion 1.9 Since 2015, the PBC requires financial institutions to conduct ML/TF risk assessments and classify customerbased on risk levels. The PBC conducts inspections of financial institutions to ensure implementation of their risk assessment

designated nonfinancial businesses and professions hall be formulated by the administrative department of anti-money la 8 and 35 of the AML Lawof  $-\mathring{S}\ddagger \ddagger ``\mathring{Z}\ddagger " \bullet \ddagger ' - ,, \mathring{Z} \checkmark ... ` \mathring{S} \checkmark \bullet f$  " †5¢))'. ' The authorities issued a notice in July 2018 to give ext to this designation, but the assessment team does not consider that the notice meets the requirements set out on Art. 35 of the AML Law (see discussion under 1222). There is currently no effective oversight or monitoring has occurred to ensure that DINBPs are implementing their obligations under R1.

#### Hill

Criterion 1.10 According to the Guidelines for the Assessment of Money Laundering and Terrorism Financing Risks and Categorized Management of Clients of Financial Institutions

status of customers and their locations, businesses, industries (occupations) and

effectiveness of their risk prevention and control mechanisms, so as to identificate with vulnerabilities and weaknesses and take targeted risk mitigation measures.

Fls are also required to improve the procedures of the risk assessment, designate suitable departments and personnel to be responsible for the establishment and monitoring of the risk assessment procedures, and ganise relevant departments to participate in the risk assessment.

As mentioned under c.1.7 above, Is are required to allocate their AML resources based on the risk assessment results and to exercise enhance data on areas with high ML/TF risk.

Trust companies are considered FIs in China; therefore, they are subject to the same obligations above.

DNFBPs have nobeen designated under the AML Lawand therefore are not subject to similar AML/CFT obligations.

Criterion 1.12 As mentioned under c.1.8 above, FIs identify some businesses as low risk, consistent with the NRA, simplified measures can be taken implified measures are not permitted whenever there is a suspicion of ML/TF, and the FIs are required to take enhanced measures, including redentification of customers and suspicious transaction reporting.

## Weighting and Conclusion

While China onlycompleted its first NRA in June 2018, it has been conducting threat, vulnerability, and risk assessments sice 2012 on a variety of topics specific to AML/CFT. There are however gaps arising from the fadthat DNFBPs have not been designated under the AML Lawand are therefore are not subject to AML/CFT supervision including supervisory risk assessments. Financial institutions are permitted, with PBC approval, to adopt simplified customer due diligence and other risk control measures for low-risk customers. No effective oversight or monitoring has occurred to ensure that DNFBPs are implementing their obligations nder Recommendation 1.

#### 

In the Third Round, China was rated largely compliant on National Coordination (formerly R.31). The primary shortcoming identified was with respect to the level of operational cooperation between law enforcement and prosecutorial authorities. It was felt that the level of cooperation needed improvement.

Criterion 2.1 In 2002 China established the AMLJM@hich is responsible for assessing the national ML/TF risk, developing national AML strategies, guiding principles, and policies.

The AMLJMOs responsible for conducting the ML/TF NRA on a regular basis. This includes the formulation and regular update of AML/CFT strategies and policies based on the risks identified in the risk assessment. The MLJMOs also responsible for identifying priori ties, delegating tasks to appropriate entities, and monitoring progress on national initiatives. Since the NRA has only been recently concluded, it is

....

""

""

""

lechnical compliance"

not possible to determine the extent to which national policies are informed by identified risks of this latest exercise.

Criterion 2.2

authority. This responsibility falls to the AMLB which is a unit within the PBC. It is responsible for organis luding the establishment and refinement of AML/CFT policies.

Criterion 2.3 The AMLJMC currently has 23 members (including the PB® inancial regulatory authorities, LEAs, judiciary and foreign affairs departments, and other industry competent authorities. Together, they are responsible for assessing the national ML/TF risk, developing national AML strategies, guiding principles and policies. The work of the AMLJMC is regulated by the Mechanism of AntiMoney Laundering Joint Ministerial Conference (2007 Aendment)

The AMLJMC has established a number of working groups, including policymaking, regulation, law enforcement, international, and data groups, which strengthen the

operational levels.

The AMLJMC enables AML competent authorities such as PBC, LEAs, regulatory authorities, and other relevant authorities to cooperate, and where appropriate, coordinate domestically concerning the development and implementation of AML/CFT policies and activities.

Criterion 2.4

-proliferation Export Control

proliferation work, and coordinating 19 members, including the PBC, the MSP, the Ministry of Commerce, and the National Development and Reform Commission, to combat PF.

national non-proliferation law.

Weighting and Conclusion

樹

In its Third Round MER, China was rated partially compliant for Rs.1 and 2 (ML offence). The main shortcomings were a lack of effectiveness, lack of slatundering, partial lack of criminal liability for legal persons, and other technical shortcomings with the Vienna and Palermo Conventions.

Criterion 3.1 The required elements from the Palermo and Vienna Conventions have partly been covered in the Criminal Law. Missing are the following elements, for both Conventions: (i) Art. 191 Criminal Law (CL

in Notice 2009:15, Art. 1(2); but (ii) Arts. 191 and 3120L All

Criterion 3.2 China follows the all-crimes approach (Art. 312 CL), however provinces and autonomous regions can also place a value range to determine if the behaviour is criminal or otherwise. This meas laundering of funds under RMB 000 (approx. USD489) is not criminalized, but this could extend to a value of RMB 1000 (approx. USD1 467) subject to the discretions of a province.

Subject to the threshold Art. 312 covers all 21 categories of prediate offences. However, some of these predicateffences are too narrow. Art. 191 CL covers seven predicate offences (drugs, organised crime, terrorism, smuggling, corruption and bribery, financial management disruption, and financial fraud), while Art. 39 CL covers only drug-related offences. Art. 312 CL is also the predicate offence of receiving stolen goods.

Criterion 3.3 This criterion is not applicable, China follows an alcrime approach in Art. 312 PC.

Criterion 3.4 Art. 191 CL

offences and the

proceeds. There is no provision in law ; however, these terms are defined in SP© guidance. There does not seem to be a threshold for the value.

Criterion 3.5 There is no evidential requirement that a conviction for the predicate offence is needed to prove that the property is the proceeds of crime. The burden of proof of the predicate offence depends on what basis the prosecution is initiated: the all-crimes coverage of Art. 312QL does not require the proof of a precise and identified predicate criminality, whereas Art. 191QL (which follows a list approach) requires establishing the link to one of the types of liste of flences (without requiring proof that the proceeds are connected to a specific predicate fence). This has also been confirmed by SPQ nterpretations.

Criterion 3.6 The Criminal Law covers all conduct by Chinese citizens inside and outside the territory, covers offences against China committed by foreigners abroad, and includes conduct specified in international treaties (Arts. 79 PC). While this does not completely cover all possible situations, there is also no limitation in Chinese law that would limit the reach of the CL in this regard. This is confirmed in jurisprudence (Quanzhou Cia Jianli case).

Criterion 3.7 Self-laundering is not criminalized in China. ML is understood to be a non-punishable subsequent action of the predicateffence, and the sanction for the laundering of proceeds of predicates would be absorbed by the sentence for the predicate offence (which requires a predicate in China. Foreign predicates that are not criminalized in China are not covered). This is not a fundamental principle of law,

Participation in organized criminal group and racketeering: Arts. 26 and 294CL define organized group, but racketeeing is not explicitly covered. Trafficking in human beings and migrant smuggling: Arts. 240 242 CLonly covers trafficking of women and children (not men), and migrant smuggling is not covered. Illegal border crossings are criminalized, but only target the victim of human beings and migrant smuggling. Piracy: Art. 122Lonly covers hijacking of a ship (or car), but no other acts of robbery and criminal violence are covered

authorised by a person in charge of the Public Security Agency at or above county level or city level if the case is consider large and complex. Having been approved, written seizure decision is prepared an authorisation is provided to an investigator. Appropriate ministries are advised, such as the MOHURD, and they are

 $<sup>\</sup>hbox{\tt """"""} Cpvk/oqpg\{\hbox{\tt "ncwpfgtkpi"cpf"p"pp"}$ 

individual terrorist, this requires a direct link to the Counter Terrorism Law. Art. 120A itself seems to cover only direct assistance and not the wilful collection of funds.

Criterion 52 bis Art. 120A of the CL covers the financing of the travel of individuals who travel to a state other than their states of residence or nationality for the purpose of the perpetration, planning, preparation of, or participation in terrorist acts or the providing or receiving of terrorist training.

Criterion 5.3 Chinese law is silent on the source of TF (legitimate or illegitimate),

#### licit or illicit

Criterion 5.4 Art. 120A CL does not seem to require that the funds or other assets were actually used to carry out or attempt a terrorist act or are linked to a terrorist act.

Criterion 5.5 Although there is no specific provision in the law stating that the intent and knowledgerequired to prove the offence can be inferred from objective factual circumstance, the concept was codified in jurisprudence by the Supreme Court (2014/34, Section 3, Art. 2). The same interpretation was stated iopinions of SPC, SPP, MPS, and the Ministry of Justice on Certain Issues concerning the Application of Law in Dealing with Criminal Cases Involving Terrorism and Extremi\$2018].

Criterion 5.6 The penalty for TF isa fixed-term imprisonment of not more than five years, openended criminal detention (one to six months detention), or openended public surveill ance (three months to two years detention), or open-ended deprivation of political rights (one to five years detention, or life imprisonment, or capital punishment), in addition to a fine (determined by the circumstances without a prescribed maximum, as per Art. 520L). If

(something which is not further specified), the penalty is raised to a fixeterm imprisonment of not less than five years, in addition to a fine, also determined by circumstances without prescribed maximum [or forfeiture of property]. This is sufficiently dissuasive and proportionate (Art. 120A, CL).

Criterion 5.7 Legal persons are criminally liable for TF and can be convicted and fined. The fines are not determined by law, but by circumstances by judges without prescribed maximum. However, a minimum amount of no less than RMB 000 (approx. USD 146) is set (Art. 520L). It is not clear if these are dissuasive and proportionate.

Criterion 5.8 Ancillary offences to all offences, including TF, are specified in the general section of theQL. TheQL criminalizes preparation (Art. 22); attempt (Art. 23); discontinuation (Art. 24); joint offenders (Art. 25); principle crime leader, ring leader, and criminal organisation (Art. 26); accomplice (Art. 27); coercion (Art. 28); and instigation (Art.

by Arts. 25, 27,

and 295 CL (giving instructions how to commit acrime).

Such regulation applies to TF and all terrorisoffences as stated in Arts. 120 A to 120 F (120-1 to 120-6) of the Criminal Law, where provisions on some special forms of terrorist activities are established.

Criterion 6.2 In relation to designations under UNSCRs 1373:

- c.6.2.a and c.6.2.b For receiving requests from other countries, the MFA is the designated authority in line with regular MLA provisions (see R.37). For domestic designations the same procedures and issues apply as for criterion 6.1.b. Designation criteria do not match the detail of INR6 paragraphs 13(c); however, the lack of a link to the UNSC does not affect this criterion Counter Terrorism LawArts. 3, 12, 13, and 16)
- c.6.2c No practical example or other (legal) information is available regarding the promptness of the consideration of the foreign request or of the domestic proposal
- c.6.2d. Beyond what is covered under c.6.2.b, there are no legal provisions on the evidentiary standard required for designations upon foreign request or domestic proposal.
- c.6.2e. There is no requirement in law to provide as much identifying information when submitting requests to other countries. Authorities indicate that in practice this is the policy that is followed, but no example was provided.

Criterion 6.3 Legal authority and procedures:

- c.6.3a. The Counter Terrorism Law(Arts. 43 and 47) gives powers the National Leading Group for Combating Terrorism as the entity with nationwide competence for the coordination of terrorist intelligence and all legal authorities. However, there are no specific criteria for designation established under the relevant UNSCRs.
- c.6.3b. There are no legal provisions or mechanisms that ensure that authorities operate ex parte against entities designated by the UNSCR or against entities to be proposed to the UN, or against entities designated upon a foreign request or a domestic proposal.

Criterion 6.4 (UNSCR 1267 only) There are no specific legal requirements regarding the legal basis for designation and freezing without delay (except: see c. ) nor have authorities been able to establish that this is done in practice.

#### Criterion 6.5

- c.6.5a. There is no requirement for all natural and legal persons within the country to freeze without delay and without prior notice, the funds or other assets of designated persons (i.e., a prohibition). For FIs and designated DNFBPse Counter Terrorism Lawrequires freezing in domestic designations (rt. 14) and the PBC has issued Notice 2017/187 which requires the immediate (same day) freezing of assets of designated terrorists after instruction by PBC, but authorities did not establish that such legal orders are issued each time after the issuing of a UNSCR or of an amendment to the list of designated entities.
- c.6.5b. There is no legal requirement to freeze assets that extends to all assets of a designated person or entity. For FIs and designated DNFBPs there is the Administrative Measures for the Freezing of Assets Relating to Terrorist Activities which comprehensively defines assets (Administrative Measures for the Freezing of Assets Relating to Terrorist Activities, Order of the PBC, the Mistiry of Public Security, and the Ministry of State Security No. [2014] 1, Arts. 5 and 11.)

c.6.5c.

required by R.6.

- c.6.5d. Not all UNSCRs and UNSC designations are communicated the financial sector and DNFBPs immediately upon taking such actions. However, the PBC maintains a website with links to UNSCRs (and FATF warnings) and circulates UNSCRs, but this is not systematically done and does not cover every UNSCR and amendment to the list. CDD requirements (see R.10) require banks to use software that include sanctions lists.
- c.6.5e. The Counter Terrorism LawArt. 14) and PBC Notice 2017/18 (Arts. 1 and 2) require reporting of freezing actions by reporting entities to the PBC, with there is a scope issue regarding DNFBPs.
- c.6.5f. Persons that receive assets from designated entities in good faith acquire property rights, as provided for bythe Property Law(Arts. 4 and 106). It is not clear if such transfers of property titles require UN authorisation, as required by the UN (see c.6.7). There are no other provisions to protect bona fide third parties (such as of parties to existing contracts with designated entities)

### Criterion 6.6

- c.6.6a. d. (6.6.a; 6.6.b; 6.6.c; 6.6.d Art. 15 of the Counter Terrorism Lawprovides the basis and procedure for appeal against a designation as terrorist under Counter Terrorism LawThe article indicates that a decision on the designation will be taken upon appeal, and that such decision is fihand will lead to unfreezing of assets if the designation is revoked. This is compliant with UNSCR 1373.66.b and 6.6.b), but not with UNSCR 1267/1989 and UNSCR 1988.66.a and 6.6.d)Notice 2017/187 in Art. 5 provides that reporting entities should inform designated entities of the possibility to appeal designation.
- c.6.6e. The MFA is said to have ssued a notice on the implementation of the UNSCR \$\pme2082\$ and 2083 which is said to state that ifan individual or entity requests to be de-listed, the MFA shall inform the relevant individual or entity to submit a request to the United Nations Office of the Ombudspersor However, these Notices were not provided.
- c.6.6f. Publicly known procedures to handle so called false positives are in place, but only apply to those sectors that are designated under AML Law(Administrative Measures for the Freezing of Assets Relating to Terrorist Activities, Order of the PBC, the Ministry of Public Security, and the Ministry of State Security 2014, Art. 195 and PBC Notice 2017/187, Arts. 3 and 4).
- c.6.6g. De-listing and unfreezing communications suffer from the same deficiencies as designation/freezing communications (seæ.6.5.d), and there is no guidance on how to handle such events.
- Criterion 6.7 The Administrative Measures for the Freezing of Assets Relating to Terrorist Activities (Art. 12) and PBC Notice 2017/187(Art. 5) provide a legal basis and procedure to request and grant access to frozen funds. This is sufficient for compliance with UNSCR 1373. However, the legal references are insufficiently specific for compliance with the specific requirements in UNSCRs 1267/1989 and 1988. UNSCR 1452. No information is avaible regarding the requirement to notify the UNSC of any intended exemption.

# Weighting and Conclusion

There are no legal provisions that prohibit legal persons and entities from making funds available to designated entities (i.e., a prohibition). The freeing requirements in the Counter Terrorism Lawand in Notice 187/2017 are incomplete in scope and only apply to FIs and designated DNFBPs, and the legal provisions do not allow for freezing without delay and without prior notice The framework in general lacks some of the details that R6 requires, such as designation criteria set by the UNSCRs and other details that should be in place, which also impact on compliance. Because of the limitations in scope, not all types of assets are covered. However, the pissions of the Counter Terrorism Lawcontain designation and freezing provisions that despite the above deficiencies allow for R6 to be partially compliant.

Criterion 7.1 There is no general legal basis for designations of **UN**ted persons or entities. There is also no legal basis for freezing of assets and for a prohibition, except for a freezing requirement for reporting entities mentioned under c7.2.a; but these measures do not allow for implementation without delay.

Criterion 7.2 The competent authority for the relevant UNSCRs is the FA

- c.7.2a There is no requirement for all natural and legal persons within the country to freeze without delay and without prior notice, the funds or other assets of designated persons (i.e. a prohibition). For FIs and designated DNFBPs, the PBC has issued Notice 2017/187 which requires the immediate (sameday) freezing of assets of designated persons and entities upon instruction of the PBC authorities did not establish that such legal orders are issued after issuing of a UNSCR or amendment to the list of designated entities.
- c.7.2b. There is no legal requirement to freeze assets that extends to all assets of a designated person or entity. For FIs and designated DNFBPs, the PBC has issued Notice 2017/187, which includes a definition that seems to cover all assets.

c.7.2c required by R.7.

- c.7.2d Not all UNSCRs and UNSC designations are communicated to the financial sector and DNFBPsimmediately upon taking such actions. However, the PBC maintains a website with links to UNSCRs (and FATF warnings) and circulates UNSCRs, but this is not systematically done and does not cover every UNSCR and amendment to the list. CDD requirements (see R.10) require banks to use software that include sanctions lists.
- c.7.2e. PBC Notice 2017/18 (Arts. 1 and 2) requires reporting of freezing actions by FIs and DNFBPs to the PBC only shortcoming in this regard relates to the scope of the financial institutions and DNFBPs that are covered under the Law
- c.7.2f. Persons that receive assets from designated entities in good faith acquire property rights, as provided for bythe Property Law(Arts. 4 and 106). It is not clear

if such transfers of property titles require UNauthorisation, as required by the UN. There are no other provisions to protect bona fide third parties (such as of parties to existing contracts with designated entities)

Criterion 7.3 PBC Notice 2017/187(Art. 8) designates the PBC and other financial regulatory authorities to monitor compliance with R.7. The shortcoming in this regard relates to the scope of the sectors that are covered under the Lawand the range of available sanctions Authorities report only being able to issue warnings and fines ranging from RMB50 000 to RMB 2million (approx. USD7 338 to 293521) (PBC Law Art. 46). See analysis of sanctions for reporting entities R.35.

### Criterion 7.4

c.7.4a b. (7.4.a; (7.4.b PBC Notice 2017/187n Art. 5 contains a provision that reporting entities shall inform their customers of the possibility to ask for humanitarian exemptions and for review of the designation by the UN. However, regarding the Focal Point (UNSCR 1730), this legal reference is insufficiently specific. The same shortcoming applies regarding the exemptions of UNSCR 1718 and 1737, which are also not specified in law. Finally, both provisions only assist customers of reporting entities, whereas the review and exemption should be available for all designated entities and applies in very concrete cases (special graphs 10 and 11 of INR7). Finally, there is no legal provision or a procedure to ensure compliance with the notification provision of UNSCR 1737 (or any information that such provisions have in practice been complied with).

c.7.4c. Publicly known procedures to handle so calletalse positive are in place, but only apply to those sectors that are designated under the ML Law (PBC Notice 2017/187, Arts. 3 and 4)

c.7.4d De-listing and unfreezing communications suffer from the same deficiencies as designation/freezing communications (see c.7.2.d), and there is no guidance on how to handle such events

Criterion 7.5 The MFA is said to have issued notices on implementation UNSCRs 1718 and 2231 and included specific provisions to cover c.7.5.a and c.7.5.b, and the language is said to track the language of the criterion Notices were not provided.

### Weighting and Conclusion

There are no legal provisions that pohibit legal persons and entities from making funds available to designated entities (i.e., a prohibition). The freezing requirements in Notice 187/2017 are incomplete in scope and only apply to Fls and designated DNFBPs, and the legal provisions do notlaw for freezing without delay and without prior notice. The framework in general lacks some of the details that & requires, such as designation criteria set by the UNSCRs and other details that should be in place, which also impact on compliance mechanin. Because of the limitations in scope, not at types of assets are covered.

In the Third Round, China was rated largely compliant on SR.VIII (now R.8). The primary shortcomings identified were a lack of outreach specific to the risk of TF abuse and a supervision and monitoring regime that did not specifically address potential vulnerabilities to terrorist activities, or discovering and preventing possible terrorist t hreats of misuse of the sector by terrorist financiers. Since the Third Round, R.8 has been significantly amended.

500 socialorganisations comprised of social groups (368 000), foundations (6500), and social serices institutions (private non-enterprise units) (425 000) as well as 1227 separately regulated overseas nongovernment organisations. The Ministry of Civil Affairs (MCA) has the responsibility for the registration and oversight of socialorganisations while the MPS has the responsibility for the registration and oversight of overseas nogovernment organisations. Theseorganisations employed a total of 7.637million people and total contributions and donations for the year amounted to RMB/8.7 billion (approx. USD 11.5 billion). The Š f "  $\leftarrow$  > f TM  $\leftarrow$  - Š  $\ddagger$   $\ddagger$   $\leftarrow$  ' ' Ž  $\ddagger$   $\dagger$  campe into, exfect in 2016  $\leftarrow$  of and China started the process of registering social organisations as charities of June2018, China had registered 494 organisations, the majority (3265) of which are foundations. Only 992 of theorganisations registered as charities to date are permitted to raise funds directly from the public

### Criterion 8.1

- c.8.1a According to China, their NRA process used information from supervisors, tax, intelligence, law enforcement, and civil affairs departments to identify the types of NPOs based on their activities or characteristics, that are likely to be at risk of TF abuse. The information presented in the NRA however only covers the inherent risk faced bysocial organisations and does not attempt to identify a subset of NPOs that fall within the FATF definition of an NPO nor how they identified the features and types of NPOs which by virtue of their activities or characteristics, are likely to be at risk of TF abuse.
- c.8.1b While China identified foundations and overseas NPOs as being at higher risk of TF abuse, no information was provided to identify the nature of threats posed by terrorist entities to these types of NPOs nor how they are specifically whereable to terrorist actors.
- c.8.1c (Partially met) While China has examined its broader NPO sector and taken steps through provisions in the Charity Lawto ensure transparency of the sectorith has not demonstrated that it has reviewed the adequacy of meares, including laws and regulations, that relate to the subset of the NPO sector that may be abused for TF support in order to be able to take proportionate and effective actions to address the risks identified.
- c.8.1d The PBC and the Ministry of CiviAffairs jointly issued the Measures for the Administration of Anti-Money Laundering and Combating the Financing of Terrorism of Social Organisation, swhich stipulates that the PBC and its branches and civil affairs departments assess the ML/TF risks of social rganisations periodically.

Criterion 8.2 The observations below concern all NPOs, not those that are at risk for TF. The general lack of targed measures to mitigate TF risks is a shortcoming in itself.

c.8.2a China's Charity Lawand the Law on the Administration of Activities of Overseas Non-Governmental Organisations within the Territory of China along with their relevant regulations, outline the policies promoting accountability, integrity, and

overseas NPOs. The focus of the laws and regulations are on internal governance, fund management, information disclosure and upervision.

c.8.2b The Measures for the Administration of Antioney Laundering and Combating the Financing of Terrorism of Social ganisations stipulates that NPOs should take countering TF measures and that the PBC, in conjunction with civil affairs departments, should undertake public educational and training programs to remind NPOs of the risk of TF, and communicate with NPOs to raise awareness of TF risks and appropriate anti-terrorism financing measures. No information; however, was provided with respect to how outreach is conducted nor how China raises awareness of the donor community about the potential vulnerabilities of NPOs to TF abuse and TF risks. While there are websites such as ones operated by the hina Social Organisation and Charities in Chinawhich disclose information on NPOs and related policies, no information specifically related to the vulnerabilities of NPOs to TF abuse and TF risks is offered.

c.8.2c Art. 22 of the Measures for the Administration of Antioney Laundering and Combating the Financing of Terrorism of Socianganisations stipulates that PBC and the civil affairs departments should jointly issue guidance documents about the

organisations and other practices. However, no information was provided regarding the development and refinement of best practices to address terrorist financing risks and vulnerabilities.

c.8.2d Art. 7 of the Measures for the Administration of Antilloney Laundering and Combating the Financing of Terrorism of Social ganisations stipulates that NPOs should conduct financial transactions through legal financial channels or in a legal manner. Art. 22 of the Law on the Administration of Activities of Overseas Non Governmental Organisations within the Territory of China outlines similar requirements.

Criterion 8.3 All NPOs are subject to annual inspections by civil affairs departments. These inspections however do not include components related specifically to monitoring for TF abuse. The Measures for the Administration of Antiloney Laundering and Combating the Financing of Terrorism of Socatganisations provides the PBC with the authority to carry out supervision and inspection on NPOs regarding fulfilling their AML/CFT obligations. To date no such supervision has taken place and it is unclear as to why China would impose AML/CFT obligations on NPOs. The Recommendations do not require this.

### Criterion 8.4

c.8.4a The PBC is responsible for the national AML and artterrorist financing supervision of NPOs. Civil affairs departments are to cooperate with the PBC by supervising NPOs in their AML and antierrorist financing work. However, no

....

""

l echnical compliance

information was provided to indicate that any risk-based supervision is being conducted in respect of TF risks. There have been no specific evaluation criteria developed for the risk of TF abuse and no riskased strategy developed toprioritise examinations in this regard.

c.8.4b The PBC and civil affairs departments have a range stanctions available to them for violations of laws and regulations related to the operations of NPOthe PBC can sanction NPOs with fines ranging from RM50 000 (approximately USD7 339) for directors, to a fine of five times the amount of illicit proceds for the NPO. Sanctions under the Charity Lawinclude warnings, confiscation, orders to rectify, and fines up to RM5200 000 (approx. USD29 352). The public security agencies equally can impose sanctions according to different illegal activities of theverseas NPOs, including: banning or ordering to stop the illegal acts; confiscation of illegal property and illegal income; revoking or temporarily banning the registration and certificates; and giving a warning to the directly responsible personnel, antito serious cases, 10 15 days detention. China implements a bipartite punishment system, where sanctions can be imposed on both the NPO and persons acting on behalf of an NOPO en the range of sanctions available and the bipartite punishment system available to Chinese authorities, these sanctions would be considered effective proportionate and dissuasive

### Criterion 8.5

c.8.5a (Met) Art. 17 of the Measures for the Administration of Antiloney Laundering and Combating the Financing of Terrorism of Social

c.8.5d Art. 17 of the Measures for the Administration of AirMoney Laundering and Combating the Financing of Terrorism of Social Organisations dicates that where the PBC and civil affair authorities have reasonable grounds to suspect that social organisations are involved in criminal activities such as ML and T, If they shall report to public security and notify each other.

Criterion 8.6 Art. 20 of the Measures for the Administration of ArMoney Laundering and Combating the Financing of Terrorism of Social Organisation dicates that relevant information obtained from NPOs by the PBC and civil affairs departments can be used for international cooperation.

Depending on the source of the requests and the nature of information or assistance requested, China will respond to international requests through appropriate authorities and procedures. Request are handled as follows: (i) judicial MLA is provided through the MoJ or the SPP accords to relevant agreements; (ii)police cooperation is provided through the MPS; (iii)financial intelligence exchange is provided by CAMLMAC; and (iv)other international cooperation requests may be channelled through the MFA. Each department has established its own procedures for receiving, assessing, and responding to these types of request

# Weighting and Conclusion

Through the various laws that pertain to Social Organisations and Overseas Non Governmental Organisations, China is able to ensure a decent level of transparency, and accountability, integrity and public confidence in its broder NPO sector. The 2016  $\S f'' \hookrightarrow f^{\mathsf{TM}} \hookrightarrow -\S \ddagger \ddagger \circlearrowleft \check{\mathsf{Z}} \ddagger \check{\mathsf{I}} \bullet$  with strengthen this sits at of the number of organisations within its broader NPO sector in an effort to identify the subset of organisations within its broader NPO sector in an effort to identify those organisations that ent the FATF definition of an NPO and are therefore at risk of TF abuse. China does not have a risk based monitoring mechanism to address the risk of TF within this sector and has not demonstrated that it conducts outreach specific to the risk of TF abuse.

## General Information on Preventive Measures of the Financial Sector

Regulations applicable for FIs do not cover payment institutions. The latter entities have their own AML/CFT regulations. General information is provided the following Recommendations.

樹

In its previous MER, China was rated compliant with the former R.4.

Criterion 9.1 While the  $f^{\text{TM}}$  '^ - Š ‡ ‡ ''Ž ‡  $\ddot{i}$  • ‡ '— "Ž 〈 ... '^ Š 〈 • f ' • ' • • ‡ " ... and the Securities Lawinclude provisions that require customer information to be kept confidentially, several laws and egulations provide supervisors and LEAs wide ranging powers to override these provisions and gain access to such information. These include the  $f^{\text{TM}}$  '^ - Š ‡ ‡ ''Ž ‡  $\ddot{i}$  • ‡ '— "Ž 〈 ... '^ Š 〈(A)fts.'61 ' • • ‡ " ... 〈 f Ž and 62), - Š ‡ ‡ ... — " 〈 - 〈 ‡ •  $f^{\text{TR}}$ epûblicŠ)‡Chi‡4AŽs‡148, 180, and 183, - Š ‡ • • — "f • ... ‡  $f^{\text{TM}}$  '^ - Š ‡ ‡ ''(އ  $\ddot{i}$  • ½ † ''(އ  $\ddot{i}$  • 5)‡the-C,ržminal PrôceŠure f

Law (Art. 52), and Measures for the Administration of AML/CFT of Payment Institutions (Arts.

China (Art. 35) provides for the establishment of a mechanism for the sharing of information among financial sector supervisors and the AML Law provides that customs andother government agencies which undertake AML functions shall report any suspicious transactions to the investigative authorities. Fls are required to provide supplementary information to the CAMLMAC when requested to do so (Art. 28, Measures for the Admin • - " f - < ' • ' ^ < • f • ... < f Ž • • - < - - - < ' • • ï Transactions and Suspicious Transaction The AML Law (Art. 28) also provides for the sharing of information with foreign governments. Fls are required to provide customer and transaction information to intermediary and beneficiary institutions (Art. 10 of Administrative Measures for Customer Identification and Documentation of Customers Identity Information and Transaction Records by Financial Institution 2007 (2). Art. 1 (1) of the Notice of the Peoples Bank of China on Strengthening the Anti Money Laundering in Cross Border Remittances PBC Documents No 2012 (TISI) are no legal provisions which address the sharing of information within financial groups, but such institutions can share information in accordance with the laws and regulations discussed above.

## Weighting and Conclusion

In its Third Round MER, China was ratedaptially compliant with the former R.5 on CDD (see 3.2.3). Main shortcomings were the lack of CDD obligations for beneficial owners, lack of enhanced and ongoing due diligence obligations, lack of specific requirements for the identification of legal persons (except for banks), lack of obligation to determine whether the customer is acting on behalf of another person, undetermined threshold for the implementation of CDD for occasional transactions, and the lack of effectiveness. The CDD recommendation has been strengthened with the revision of FATF standards in 2012.

Due diligence measures for FIs providing safety deposit box services, are limited to

Administrative Measures for Customers Identification and Documertatof Customers Identity Information and Transaction Records by Financial Institutions

Criterion 10.1 Fls

Art. 16 of AML Law).

Criterion 10.2

c.102a c Fls should, when establishing any business relationship with a client or providing occasional transactions above a designated threshold, require the client to

certificat Art. 16 of

AML Law). Art. 7 of Administrative Measures for Customers Identification and Documentation of Customers Identity and Transaction Records by Financial Institutions (Order of the PBCCSRC, and CIRC No. [2007]\$2)s a threshold of RMBI0 000 or

foreign currency with equivalent value of USD 0008; for a single sum of occasional transactions (such as cash remittance, cash exchange, negotiable instrument cashing) and requires institutions to get information about the natural person(s) who ultimately controls a customer and/or the natural person on whose behalf a transaction is being conducted.

±''ޱï•

c.10.2d e When there is a suspicion of ML/TF, FIs, including payment institutions,
- identification is also required when the
institution has doubts about the veracity or adequacy of previously latained
customer identification data (Art. 22 of Administrative Measures for Customers
Identification and Documentation of Customers Identity and Transaction Records by
Financial Institutions (Order of the PBC, CSRC, and CIRC No. [2007] 2))

Criterion 10.4 Fls should identify and verify the identity of any person purporting

(Art. 16 of AML Law; Art. 20 of Administrative Measures for Customers Identification and Documentation of Customers Identity and Transaction Records by Financial Institutions (Order of the PBC, CSRC, and CIRC No. [2007] ②) Prepaid card institutions are required to verify, when a proxy buys a prepaid card on behalf of others, the existence of the proxy relationship through a reasonable manner and identify and verify the identity of the proxy. No such requirements for other types of payment institutions exist(Art. 15 of Measures for the Administration of Anti-Money Laundering and Combating the Financing of Terrorism of Payment Institutions (PBC Document No. [2012] 54)

Criterion 10.5 Fls

person(s) who ultimately controls a customer and/or the natural person on whose

beneficial owner of the nonnatural person clients and trace down to the natural person who ultimately controls or owns the be definition of beneficial owner is qualified as it referring to a natural person who

Which falls below the applicable designated threshold of (USD/EUR 10500) for occasional transactions in the FATF standards.

is no explicit requirement for payment institutions to ensure that documents, data, or information collected under the CDD process is kept utpo-date and relevant.

Criterion 10.8 underst

-natural-

-natural-

In this process they must collect, understand, and preserve registration certificates, proof of existence, the partnership agreement, the trust agreement, memorandum and articles of association and registration information of shareholders or members of the board (including the board of directors, senior management and list of shareholders, number of shareholdings of each shareholders and ownership types (including related voting type)) (Arts. 1.1 and 1.8 oNotice of the PBC on Strengthening Customer Identification Mechanism in AML (PBC Document No. [2017] 23-50) wever, the requirement to implement these measures seems to be unduly limited to taking reasonable measures.

Criterion 10.9 Regulated institutions should understand, obtain, and properly retain the following information and materials on non-natural-person clients: ownership of shares or right of control (mainly includes: registration certificates, proof of existence, the partnership agreement, the trust agreement, memorandum and articles of association, registration information of shareholders or members of the board (mainly includes: the board of directors, senior management and list of shareholders, number of shareholdings of each shareholders and ownship types (including related voting type etc.). Financial institutions are also required, among other information, to register the address; scope of business; the name, number, and valid term of the license, certificate, or document which may prove that the client is lawfully established or lawfully carries out the business operation or social activities; the names of the legal representative, persoin charge and authorised working

However, FIs are not required to take enhanced measures, beyondenhanced customeridentification measures, if it determines that a beneficiary who is a legal person or a legal arrangement presents a higher risk.

Criterion 10.14 FIs, including payment institutions, are required to verify the identity of the customer when establishing a business relationship (Art. 16 of AML Law) Art. I.1 of  $\ddagger \bullet \ddagger " f \ Z \quad ? \land \lor ... \ddagger " \land - \ Z \ddagger " \dotplus " Z \ddagger " \bullet f \bullet \bullet " \land " \mathring S \lor \bullet f$  Strengthening Work on Ant-Money Laundering and Combating the Financing of Terrorism (PBC GAD2018 130) stipulates that complete the identity verification of the customer and its beneficial owner before

complete the identity verification of the customer and its beneficial owner before establishing a business relationship or conducting occasional transactions above the designated threshold, and are permitted to complete the verification as soon as reasonably practicable following the establishment of the relationship, where the ML/TF risks are effectively managed and where this is essential not to interrupt the normal conduct of business. should establish corresponding risk management mechanisms and procedures to implement effective risk management measures with respect to the conditions under which a customer may utilise the business relationship prior to verification, such as limiting the number of transactions, type or amount of transactions, and strengthening transaction monitoring.

Criterion 10.15 Regulated institutions are required to establish corresponding risk management mechanisms and procedures to implement effective risk management measures with respect to the conditions under which a customer mayutilise the business relationship prior to verification, such as limiting the number of transactions, types or amount of transactions, and strengthening transaction ‡•‡"*f* Ž monitoring (Art. I.1 of Notice ' ^ - Š ‡ Further Strengthening AntiMoney Laundering and Countering Terrorism Financing (PBC GAD [2018]No. 130However, financial institutions may allow low-risk customers only toutilise the business relationship prior to verification, provided that risks are controllable (Art. IV.II.1 of Notice of the PBC on Issuing the Guidelines for the Assessment of ML/TF Risks and Categorized Management of Customers of Financial Institutions (PBC Document No. [2013] 2) Given that Art. I.1 of (PBC Document No. [2013] 2) stipulates that its implementation is not mandatory, the requirements governing the situation where low-risk customers are allowed toutilise the business relationship prior to verification are not clear.

Criterion 10.16 Fls are required to supplement or update CDD information of existing customers (Art. II.1 ofNotice of the PBC on Further Strengthening the AML Work of Financial Institutions (PBC Document No. [2008] 3) and are expected to enhance the updating of records when risks are high. However, it is not provided that updating should be performed on the basis of materiality or at appropriate times.

Payment institutions are required to complete CDD information of existing customers within two years (General provisions of Measures for the Administration of AMtoney Laundering and Combating the Financing of Terrorism of Payment Institutions (PBC Document No. [2012] 5/4 The implementation of CDD for existing relationships of

payment institutions is not required on the basis of materiality and risk, and at appropriate times.

Criterion 10.17 Art. II.1 of  $\ddagger \bullet \ddagger "f \check{Z} \quad \land \land \ldots \ddagger \ ` \uparrow - \check{S} \ddagger \ \ddagger ` ' \check{Z} \ddagger \check{I} \bullet \ f \bullet \bullet \ ` \land$  Further Strengthening Work on AntMoney Laundering and Combating the Financing of Terrorism (PBC GAD2018 130) stipulates that, in situations where the ML/TF risk

and transaction monitoring measures commensurate to the risks. The Article also provides for a series of enhanced measures that can be taken by institutions commensurately to risk. However, ArtI.1 of (PBC Document No. [2013] 2stipulates that its implementation is not mandatory, therefore, it is not clear whether or not it is mandatory for financial institutions to apply enhanced measures in situations where ML/TF risks are high.

Criterion 10.18 Fls should scientifically allocate AML resources according to the risk assessment results and adopt simplified AML measures in areas with lower ML risks. For customers with significantly lower risks that can be effectively controlled, an Fl may, at its discretion, decide to directly assign the lowest risk level to them (without assessment), provided that some circumstances on not apply, including that the customer is involved in any report on suspicious transactions(Art. I.1.1, II.IV.1 of Notice of the PBC on Issuing the Guidelines for the Assessment of ML/TF Risks and Categorized Management of Customers of Financial Institutions (PBC Document No.[2013] 2) However, Art. I.1 of (PBC Document No. [2013] 2) tipulates that its

## Criterion 12.2 For senior management of internationalorganis

the Notice of the PBC on Strengthening Customer tidienation Mechanism in AMI(PBC Document No. [2017] 235 when encountering higher risk in providing services (Art. 2.2 of Notice of the PBC on Strengthening Customer Identification Mechanism in AML (PBC Document No. [2017] 235 However, financial institutions are not required to implement specific due diligence requirements for domestic PEPs.

Criterion 12.3 Financial institutions are required to perform the obligation of due

otherwise closely related to them (Art. 2.4 of Notice of the PBC on Further Strengthening the AML Work of Financial Institutions (PBC Document No. [2008])391 Specific natural persons such as foreign PEPs and senior executives of international organisations including foreign PEPs, senior management personnel of international organisations, as well as close relatives including parents, spouses, children, etc., as well as other natural persons who have a relationship of generating and sharing common interests through work and life that the regulated institutions know or should know (Art. 4.2 ofNotice of Further Strengthening Work on the Identification of Beneficiary Owners (PBC DocumteNo. [2018] 164))However, these requirements do not apply for domestic PEPs.

Criterion 12.4 Generally, where risk level is hi2 (and 0 595.32 .47 Td [(Bener3.99412.002 (n)4-4

- **MAS** 

In the Third Round, China was rated largely compliant with the former R.17, due mostly to inadequate sanctions, and sanctions not focusing on structural weaknesses.

Criterion 14.1 In China, commercial banks are permitted to engage in the business of MVTS under their banking licenses. Nebanking Fls must obtain a Payment Business Permit following an approval process by the PBOMeasures for the Administration of Payment Services of Normancial Institutions, Art. 3). This measure is not applicable to natural persons. Involvement of natural persons in remittance activity is a criminal offence (Art. 255, Criminal Law).

Criterion 14.2 It is a criminal offence to engage in fund payment and settlementativity is a a -3.995 (

# Weighting and Conclusion

Arrangements are in place to ensure that MVTS providers are licensed and monitored for AML/CFT compliance. Banks are not explicitly required to include agents their AML/CFT programs and monitor them for compliance with such programs.

In its previous MER, China was rated largely compliant with the former R.8. The main deficiency identified was the absence of requirements related to neface-to-face business in the insurance sector.

### Criterion 15.1

by various types of Fls. It examines risks associated with some newer products/services such as prepaid cards, online lending services (e. peerto-peer loans).

Financial institutions are required to analyse risks of their financial business and marketing channels, especially before launching any financing business, marketing channel, or new technology. Art. 2, Chapter 5 offhe Notice of the PBC on Issuing Guidelines for the Assessment of ML/TF Risk and Categorized Management of Customers of Financial Institutions

that Pls have been sanctioned for illation of these provisions; however, there is no explicit requirement for Pls to identify and assess the ML/TF risks that may arise in relation to the development of new products and new business practices.

Criterion 15.2 Financial institutions are required to analyse risks arising from its financial business and marketing channels, especially before launching any financing business, marketing channel or new technology. They are also required to develop appropriate measures toadequately mange risks identified Chapter 5, Art. 2 of The Notice of the PBC on Issuing Guidelines for the Assessment of ML/TF Risk and Categorized Management of Customers of Financial Institutions comment on payment institutions in 5.1).

# Weighting and Conclusion

While FIs are required to identify and assess risk in relation to the development of new products and take appropriate measures to mitigate such risks, Playhich offer many innovative products, are not subject to such obligations.

In its previous MER, China was rated largely compliant with the former SR.VII. The main deficiency identified was that customer verification was only required for payments in exces of the equivalent of USIB 300. The FATF standards in this area have since expanded to include requirements related to beneficiary information.

Criterion 16.1 Financial institutions providing cross-border remittance services, including wire transfers,

Where an account number cannot be obtained for either the originator or the beneficiary, the institution must use a unique transaction reference number that allows the transaction to be traced Notice on Further Strengthening Work on Anti Money Laundering and Combatting the Financing of Terrorism [PBAD] (2018) 130 In the case 6 cross-border transfers of RMB10 000 or a foreign currency transfer equivalent to USD1 000, institutions must verify the originator information. (Art. 1 (1) of the ' $-\langle ... \ddagger$  ' $^{^{\circ}}$  – $^{\circ}$   $^{\ddagger}$   $^{\ddagger}$  ' $^{^{\circ}}$   $^{\dagger}$   $^{\bullet}$  • ' $^{^{\circ}}$  Š ( $^{\bullet}$   $^{f}$  ' $^{\bullet}$  – " $^{\ddagger}$  • % – Š  $^{\ddagger}$  • ' $^{\circ}$  % Remittances (PBC Document 2012 (199)As RMB10 000 is equivalent to approximately USD1 467,97 there is no obligation to verify originator information obtained on crossborder transfers denominated in yuan unless the amount of the transfer exceeds the yuan equivalent of USD467.

Criterion 16.2 (Not applicable) There are no specific requirements for batch transfers. Such transfers must therefore comply with the provisions described under c.16.1.

Criterion 16.3 It is a requirement that the information set out under 16.1 accompanyall wire transfers (Notice on Further Strengthening Work on Antiloney Laundering and Combatting the Financing of Terrorism [PBGAD] (2018) 130)For cross border transfer under RMB 10,00 USD 1,467 such information would not be verified Regulated

Criterion 16.4 In the case of cross-border transfers of RMB10 000 or a foreign currency transfer equivalent to USDI 000, institutions must verify the originator information. (Art. 1 (1) of the '-‹...‡' $^-$ –Ї‡' $^+$ އ $^-$ •  $^+$ ••' $^-$ Š (• AML in Cross Border Remittance PRC Document 2012 (19)9) As RMB10 000 is equivalent to approximately USDI 467, 8 there is no obligation to verify originator information obtained on cross-border transfers denominated in yuan unless the amount of the transfer exceeds the yuan equivalent of USDI 467. These provisions do not include an obligation to verify beneficiary information. Where there is suspicion of ML or other illegal activity, regulated institutions are required to verify the identity of the originator but not the beneficiary. At .II (1) of the Notice on Further Strengthening Work on Anti-Money Laundering and Combatting the Financing of Terrorism [PBC GAD] (2018) 130, equivalent of USD 000, there is, therefore, no

Criterion 16.5 The legal requirements applicable to domestic wires transfers relate

Measures for Payment and Settlement PBC Document (1997), 3993 vides that a

name and account number of the originator, and the beneficiary. The bank must reject a remittance certificate that does not include this information. There is no requirement for the information to be verified. In addition, this requirement is applicable to banks and not to other institutions that providedomestic wire transfer services. There is no provision that would allow this information to be made available

......

Pased on RMB/USD exchange of 6.8138 as at July 27, 2018 the last day of the onsite.

Based on RMB/USD exchange rate of 6.8138 as at July 27, 2018, the last day of the onsite.

to the beneficiary financial institution or appropriate authority through other means. Payment institutions are required to ensure that all transactions include the name

identification number. There is no requirement for the information to be verified. There is no provision that would allow this information to be made available to the beneficiary financial institution or appropriate authority through other means

Criterion 16.6 (Not applicable) There is no provision that would allow information that should accompany a wire transfer to be sent separately from the transfer.

Criterion 16.7 The provisions of Art. 19 of the AML Lawwhich require identification information to be maintained for a period of five years after the end of the business relationship and transaction records to be maintained for five years after the date of the transaction, apply to the information collected on the originator and beneficiary, in the case of wire transfers.

Criterion 16.8 Ordering institutions are prohibited from executing a transfer if it does not comply with the requirements of the 16.1 to 16.7Art. II (4) (4) Notice on Further Strengthening Work on AntMoney Laundering and Combatting the Financing of Terrorism [PBC GAD] (2018). As there is no requirement to verify originator information for cross-border transfers less than RMB 0 000, ordering institutions are not prohibited from executing transfers that donot meet the requirements of R.16.1 16.7 in this regard.

Criterion 16.9 Intermediary institutions are required to ensure that all originators and beneficiary information accompany wire transfers and are retained with it (Notice on Further Strengthening Work on Antiloney Laundering and Combatting the Financing of Terrorism [PBCGAD] (2018) 13()).

Criterion 16.10 The provisions of Art. 19 of the AML Law which require identification information to be maintained for a period of five years after the end of the business relationship, and transaction records to maintained for five years after the date of the transaction, apply to the information collected on the originator and beneficiary, in the case of wire transfers and are applicable to all FIs, including intermediary institutions. In circumstances in which originator or beneficiary information does not accompany the wire transfer, the intermediary institution is required to retain the information received from other institutions.

Criterion 16.11 On receiving funds from abroad, regulated institutions are quired to take reasonable measures identify cross-border wire transfers that lack required originator and beneficiary information (Notice on Further Strengthening Work on Anti-Money Laundering and Combatting the Financing of Terrori [FBC GAD] (2018) 130)).

Criterion 16.12 Regulated institutions that are intermediary institutions are

identify cross border transfers that lack required originator and beneficiary information. Art. II (3) Notice on Further Strengthening Work on Antiloney Laundering and Combatting the Financing of Terroristance GAD] (2018).

Criterion 16.15 Where crossborder transfers lack required originator and beneficiary information regulated institutions that are beneficiary institutions are required to have risk-based policies and proceduresd determine if it should execute, reject or suspend the transfer and to take followup action (Art. II (3) Notice on Further Strengthening Work on AntMoney Laundering and Combatting the Financing of Terrorism[PBC GAD] (2018) 30).

Criterion 16.16 This criterion is not applicable to payment institutions as they are not permitted to use agents. However, banks can use agents., Financial institutions are required to ensure that their overseas branches and subsidiaries implement group requirements (seeanalysis ofc.18.3). The deficiencies discussed with regard to R.16 would apply to FIs overseas branches, subsidiaries and agents.

Criterion 16.17 Where a regulated institution that controls both the ordering and the beneficiary side of a wire transfert is required to review I information from both the ordering and beneficiary sides in determining if an STR hould be filed. This requirement does not cover the filing of STRs in any country affected by the suspicious wire transfer (Art. II (4) (3) Notice on Further Strengthening Work on Ant Money Laundering and Combatting the Financing of Terroris (FABC GAD) (2018) 30).

### Weighting and Conclusion

China has generally sound requirement related to wire transfers. The threshold of RMB equivalent of USD 467 for verifying the identify of originators and beneficiaries, deficiencies in requirements for an institution that cover both side of a transfer, and weaknesses with respect to targeted financial sanctionare notable weaknesses in the arrangements.

In its Third Round MER, China was ratedaptially compliant with the former R.9 on reliance on third parties. Main shortcomingswere the lack of: (i) requirement to obtain core customer identification data from the third-party; (ii) requirement to ascertain the status of the third party with respect to regulation and supervision for AML purposes, and (iii)conditions in relation to reliance on third parties emanating from countries with inadequate AML regimes.

Criterion 17.1 Chinese laws allow FIs to rely on third parties for performing CDD measures (Art. 17 of AML Law) -party institutions to perform customer identification, they shall take following measures: (i) satisfy itself that the third party is regulated, and supervised or monitored for, and has measures in place for compance with, customer identification and record keeping requirements in line with AML laws, administrative regulations, and the requirements of this notice; (ii) obtain immediately the necessary information of customer identification from the third-party institution; and (iii) take steps to satisfy themselves that copies or photocopies of customer identification documents and other related materials from the third party upon request without delay. The regulated institution should assume the responsibility 6 the third-party institution for failure to fulfil customer identification obligations (Art. I.2 of General Office of the '-·...‡ '• —"-Ї" - "-**!**Mro%ney Š ‡ • < • ‰ ±''އï• Š ( • f

Laundering and Combating the Financing of Terrorism (PBGAD (2018) 130)). However, the provisions do not stipulate what are necessary information that should be obtained immediately from the third-party.

Criterion 17.2 When determining in which countries the third party that meets the

relying on

third parties located in the high-risk countries or regions to carry out customer identification (Art. I.2 of General  $^{^{^{^{^{\prime}}}}}$ ...  $^{^{^{\prime}}}$   $^{^{^{\prime}}}$   $^{^{\prime}}$   $^{^{\prime}}$ 

Criterion 17.3 (Not applicable) China does not have specific requirements for FIs that rely on a third party that is part of the same financial group.

## Weighting and Conclusion

The only shortcoming is the lack of specific requirement in relation to necessary information that should be obtained from a thirdparty.

in tigal

In its Third Round MER, China was ratedaptially compliant with the former R.15 internal controls, and non-compliant with the former R.22 on foreign branches and subsidiaries. Main shortcomings with respect to the former R.15 were the internal control environment is not set up to address TF risk, and the lack of requirements on: (i) communicating policies and procedures to employees; (ii) screening provisions

mechanism to implement countermeasures against countries that did not sufficiently apply the FATF standards. R.19 strengthens thequirements to be met by countries and FIs with respect to higherisk countries.

## Weighting and Conclusion

There are conflicting reporting requirements in place for payment institutions. In addition, the minor deficiency regarding the scope of predicate offees for ML, as identified in the analysis of R.3 above, has a spill over on the reporting obligation.

th 2 - jj - fajl

In the Third Round MER, China was rated compliant with these guirements.

Criterion 21.1 Financial institutions, including payment institutions, and their employees "are protected by law" when fulfilling their obligation to report suspicious transactions in accordance with the law AMLLaw, Art. 6 and Measures forthe Administration of Financial Institutions' Reporting of Large/alue Transactions and Suspicious TransactionsArt.11). The AML Lawdoes not define the extent of this protection, but the authorities clarified that many other laws contain a similar protection provision. There is jurisprudence that shows that the courts interpret this protection broadly to include both criminal and civil liability.

Criterion 21.2 Tipping off is prohibited under Art. 15 of the Provisions on Anti Money Laundering Through inancial Institutions and Art. 23 of the Measures for the Administration of Financial Institutions' Reporting of Large alue Transactions and Suspicious Transactions which prevent financial institutions, including payment institutions, and their staff from disclosing to their customers, or any other person, information relating to suspicious transactions and any resulting investigation by the PBC. These provisions do not appear to inhibit information sharing under R.18 by Fls with the exception of paymentinstitutions (Notice of the People's Bank of China on Strengthening Customer Identification Mechanism in Allioney Laundering Section 3(5), which does not apply to payment institutions).

### General Information [on preventive measures for DNFBPs

Authorised trust investment companies are the only entities in China that are permitted to be in the business of administering trusts (Regulations on Trust Investment Corporations sued in 2001 and revise in 2002). No other FIs, lawyers, accountants, or other professionals are permitted to engage in this activity as a business. Trust investment companies are treated as FIs (nonbank banking institutions) under Chinese law, and are supervised by the CBR@wever, authorities stated that the PBC still assumes the AML regulatory responsibilities for trust companies.

Any individual or entity that has obtained authorisation from the administrative departments of the SAMR (the general enterprise registration pocedure) can be a company service provider (i.e., someone who is uthorised to be in the business of assisting in the establishment or registration of companies). No particular qualifications are necessary in order to obtain suclauthorisation.

The scopeof the DNFBPs that shall perform AML obligations and the specific AML obligations thereof need to be formulated by the PBC in collaboration with the relevant departments of the State Council/AML Law Art. 35). On July 26, 2018, the Notice of the General O<sup>^</sup> ← ... ‡ ' <sup>^</sup> – Š ‡ ‡ ' ' Ž ‡ ï • f • • ' ^ Š ⟨ • f ' • Money Laundering Supervision Work on Designated Nonancial Businesses and Professions, 2018, No. 120 tered into force. This Notice designates the DNFBPs and subjects all DNFBPs to AML/CFTequirements imposed under different regulations for different sectors, invariably. Given that this Notice was not issued in collaboration with the relevant departments of the State Council, the designation is deemed to not be made yet, except for preciousnetals trading venues (since PBC is the regulator of this sector). The Notice of the MHURD, the PBC, and the China Banking Regulatory Commission on Regulating the Financing of Home Buying and Strengthening Anti Money Laundering (MHURD Document No. [2017] 52 provided some AML obligations for real estate agents, however, it was not issued based on tAML Law and did not make an explicit designation of real estate agents as DNFBPs. Similarly, the Notice on Strengthening the Supervision of Certified Publico Auntants (Ministry of Finance Accounting Department Document No. [2018]) &ncludes AML/CFT obligations (internal control system, CDD, recordkeeping, and carrying out enhanced due diligence according to risk assessment result and reporting suspicious transactions) for accountants. In the absence of a designation, DNFBPs are therefore not subject to AML/CFT obligations, except for precious metals trading venues. In addition to relevant provisions in the AML Law, the '-⟨...‡'^ -Ї ±''އï• on Strengthening the AntiMoney Laundering and Combating the Financing of Terrorism Related to Precious Metals Trading Venues (PBC Document No. [2017] 218 provides AML obligations for precious metals trading places (Thereafter, DPM: Dealers in Precious Metas). The PBC required the forwarding of this Notice to members and their agents, therefore, it is considered that the Notice is only enforceable for trading places and dealers.

The PBC is working with competent departments of relevant industries to establis the AML/CFT administration systems for lawyers and notaries, which will stipulate obligations on CDD, recordkeeping, PEPs, new technologies, internal controls, enhanced CDD measures against the highest countries, and tipping-off and confidentiality for these DNFBPs.

Criterion 22.1 DPM shouldestablish and improve a clients' identity identification system (Art. 3 of AML Law). When conducting customer identification, DPMs verify the identity of customers using reliable, independent source documents, that or information, and understand and, as appropriate, obtain information on the purpose and intended nature of the customer's establishment and maintenance of the business relationship. DPMs should also complete the identity verification of the customend its beneficial owner before establishing a business relationship or conducting occasional transactions above the designated threshold and are permitted to complete the verification as soon as reasonably practicable following the establishment of the relationship, where the ML/TF risks are effectively managed and where this is essential not to interrupt the normal conduct of business. DPMs should establish corresponding risk management mechanisms and procedures to implement effective risk management measues with respect to the conditions under which a customer mayutilise the business relationship prior to verification, such as limiting the number of transactions, type or amount of transactions, and strengthening transaction monitoring (Art. 3 of AML Law Art. I.1 of  $\ddagger \bullet \ddagger$  "  $f \ \check{Z}$   $\hat{A} \land \hat{A} \leftarrow \hat{A} \Rightarrow \hat{A} \Leftrightarrow \hat{A} \Rightarrow \hat{A} \Leftrightarrow \hat{A$ Bank of China Notice on Further Strengthening Work on AlMoney Laundering and Combating the Financing of Terrorism (PBC GAND18 130)).DPMs should understand the natural person(s) who ultimately controls a cutomer and/or the natural person on whose behalf a transaction is being conducted. (Art. II.cNobtice of ‡ ''އï• f•• '^ Š ·• f '• -"-tMo%ey-LŠatmderikg andŠCtombating the Financing of Terrorism Related to Precious Metals Trading Vesn (PBC Document No. [2017] 218). However, there is no explicit requirement to identify the beneficial owner and take reasonable measures to verify the identity of the beneficial owner, using the relevant information or data obtained from a reliable soure, such that the DPM is satisfied that it knows who the beneficial owner is.

±''ޱï•

±''އï•

DPMs should conduct ongoing customer identification measures on the business relationship, review in detail the recorded customer data and transactions occurred during the existence of the business relationship, update customer identification documents, data, information,and materials in a timely manner to ensure that the

customer, their business and riskprofile, including where necessary, the source of funds. For higherrisk categories of customers, DPMs should increase the frequency and intensity of the on-going monitoring (Art. I.1 of  $\uparrow \bullet \uparrow$ " f Ž  $^{^{\circ}}$   $^{^{\circ}}$   $^{^{\circ}}$   $^{^{\circ}}$   $^{^{\circ}}$  of China Notice on Further Strengening Work on AntiMoney Laundering and Combating the Financing of Terrorina (PBC GAD2018 130)). However, there is no explicit requirement for DPM to ensure that documents, data or information collected under the CDD process is kept upo-date and relevant.

Art. II.1 of ‡•‡" f Ž ^^<...‡ '^ -Ї ‡''އï• f•• '^ Š<•f '-<...‡ '• Work on Anti-Money Laundering and Combating the Financing of Terrorism (PBC GAD 2018 130) stipulates that, in situations where the ML/TF risk is higher, DPMshould take appropriate customer identification and transaction monitoring measures

commensurate to the risks. The Article also provides for a series of enhanced measures that can be taken by DPMs commensurately to risk.

e to or have trade with any client who cannot clarify his identity (Art. 16 of AML Law). If DPM are unable to comply with relevant

customer identification work or after an assessment that the circumstances exceed the risk management capabilities of the infitution, it shall not establish or maintain business relationships with the customer and shall consider submitting an STR in relation to the customer (Art. I.1 of  $\ddagger \bullet \ddagger "f \check{Z} \quad \hat{ } \land \leftarrow ... \ddagger \quad \hat{ } \land -\check{S} \ddagger \quad \ddagger \quad \hat{ } \acute{Z} \dagger \ddot{ } \bullet f$  on Further Strengthening Work on AnfMoney Laundering and Combating the Financing of Terrorism (PBC GAP018 130)).

There are no obligations for DPMs stipulating situations when CDD is required. DPMs are not required to (i) verify that any person purporting to act on behalf of the customer is so authorised and identify and verify the identity of that person; and (ii) apply any specific CDD measures for legal persons and arrangements. In addition, DPM are not permitted not to pursue the CDD process (and required to file an STR) in cases where a M/TF suspicion is formed, and they reasonably believe that performing the CDD process will tipoff the customer.

Requirements for TSPs are the same as those for FIs, and, therefore, the analysis under R.10 applies here for TSPs. The other DNFBPs are nestignated yet; therefore, they are not subject to CDD requirements.

### Criterion 22.2

transaction records for at least five years, and ensure that they can reconstruct every transaction precisely and completely (Art. II.e of '- < ... ‡ '^ - Š ‡ ±''ޱï• on Strengthening the AntMoney Laundering and Combating the Financing of Terrorism Related to Precious Metals Trading Venues (PBC Document No. [2017] 218) DPMs should have programso ensure that all customer identity information and transaction records are available swiftly, conveniently and accurately to domestic competent authorities including regulatory authorities and LEAs upon appropriate authority (Art. V of General Office of Ї ‡''އï• Š∢∙f Strengthening Work on AntMoney Laundering and Combating the Financing of Terrorism (PBC GAD2018 130)). However, the requirement to keep records for five years does not specify as of when it should start tapply. The requirement to keep transaction records does not extend to business correspondence and results of any analysis undertaken.

Requirements for TSPs are the same as those for FIs, and therefore the analysis under R.11 applies here for TSPs. The otheNFBPs are not designated yet; therefore, they are not subject to CDD requirements.

Criterion 22.3 Requirements for TSPs are the same as those for FIs, and, therefore, the analysis under R.12 applies here for TSPs. The other DNFBPs are not designated yet; therefore, they are not subject to CDD requirements.

Criterion 22.4 Requirements for TSPs are the same as those for FIs, and therefore the analysis under R.15 applies here for TSPs. The other DNFBPs are not designated yet; therefore, they are not subjet to CDD requirements.

Criterion 22.5 If DPM rely on third-party institutions to perform customer identification, they shall take following measures: (i) satisfy itself that the third party is regulated, and supervised or monitored for, and has measures place for compliance with, customeridentification and record-keeping requirements in line with AML laws, administrative regulations and the requirements of this notice; (ii) obtain immediately the necessary information of customer identification from the

suspect that funds are the proceeds of a criminal activity; or (ii) attempted transactions. Moreover, the obligation to report suspicion is not set in a law.

DPMs should promptly submit the reports to the CAMLMAC and the PBC or its local branches (Art. V. of  $\ddagger \bullet \ddagger$ " f Ž  $\hat{Z}$   $\hat{Z$ 

Requirements for TSPs are the same as those for FIs, and, therefore, the analysis under R.20 applies here for TSP\$ the other DNFBPs are not designated yet; therefore, they are not subject to CDD requirements.

Criterion 23.2 Requirements for TSPs are the same as those for Fls, and, therefore, the analysis under R.18 applies here for TSPshe other DNFBPs are not designated yet; therefore, they are not subject to CDD reciprements.

Criterion 23.3 Requirements for TSPs are the same as those for Fls, and, therefore, the analysis under R.19 applies here for TSPshe other DNFBPs are not designated yet; therefore, they are not subject to CDD requirements.

Criterion 23.4 When a DPM submits a report on a suspicious transaction, it shall be protected by law (Art. 3 of AML Law). There are no law provisions (i) providing a similar protection for directors, officers and employees of a DPM from both criminal and civil liability; (ii) prohibiting those from disclosing the fact that an STR or related

34, 36 37, 63 64, and 68). Additional similar measures are in place specifically for listed companies Securities LawArts. 20, 63, 67, 160, and 93). The verification of the registered information is undertaken through a random check (Art. 2, office Interim Measures for the Random Inspection of Public Disclosure of Information by Enterprises), but there are no other mechanisms to ensure accuracy and timely updating of the information referred to in 24.3 and 24.4.

Criteria 24.6 and 24.7 Beneficial ownership information is not required nor registered at company formation stage, or to by the companies themselves. To comply with this criterion, authorities refer to the existing information\ obtained by Fls. However, financial institutions only need to take reasonable measures to identify the beneficial owner and monitor CDD information for accuracy, but there is no requirement regarding timeliness. No beneficial ownership information would be available on companies (or specific entities that are part of larger legal structures) or other types of legal entities that are not a customer of a financial institution in China.

Criterion 24.8 The are no specific additional requirements to ensure that companies cooperate with competent authorities to the fullest extent possible to determine the beneficial owner.

Criterion 24.9 Basic ownership information collected at creation and information on directors and board must be kept indefinitely by the company Provisions on the Scope of Collection and Preservation Period in the Document Archiving of Enterprises Art. 8.1) and upon dissolution of the entity sent to the SAMRA(chives Law Art. 11 and SAIC Archive Measure, Arts. 5 and 6). No beneficial ownership information is collected or maintained, but if beneficial ownership information was collected as part of CDD, then it must be kept for five years after the end of the business relationship (see R.11).

Criterion 24.10 Basic legal ownership information (as far as collected) is publicly available, as noted under criterion 24.1. No beneficial ownership information is collected or maintained, but if beneficial ownership information was collected as part of CDDthen law enforcement bodies have the powers to obtain basic legal ownership information as part of their regular coercive powers (see R.31) from FIs and financial supervisors can obtain the information also as part of their regular supervisory powers (see R.27), but sharing is not given.

Criterion 24.11 Bearer shares are permitted to be issued by all domestic and foreign registered companies that issue shares. Transfer of bearer shares becomes effective immediately upon delivery of the shares by the shareolder to the transferee. Transfer of shares by shareholders must be conducted at a securities trading place established according to the lawor by other means stipulated by the State Council (Company Law Arts. 129, 138, and 140). In practice, this mea electronic (dematerialized) transfer of shares through the China Securities Depository and Clearing Corporation (CSDC), which is also the custodian for bearer shares issued on

s no

provision in law that prohibits transfer of bearer shares in other ways. Also, there are no provisions that require all bearer shares issued on paper to be deposited with the CSDC, or that prevent issuing new bearer shares on paper.

Criterion 24.12 Nominee shareholders and directors exist and are allowed, as a normal part of civil law contract law (freedom of contract and autonomy of will), as

confirmed by the SPC Rrovisions of the SPC on Several Issues Concerning the Application of Company LawArts. 24 28). The nominee shareholders and directors are to be presented to the outside world as if they are the actual or real shareholders or directors (principle of publicity) to ensure uninterrupted commercial transactions and protect bona fide third part ies. There is no requirement to disclose nominee shareholders or directors, require them to be licensed and the status recorded, or other mechanism.

Criterion 24.13 A sufficient range of sanctions is available to the authorities, including but not limite

This Recommendation covers civil trusts: wealth, educational, and testamentary. Educational civil trusts aim to provide for funds for education, testamentary civil trusts aim to ensure that the will of a deceased is executed (as far as the distributio

to be managed by another person. This recommendation also covers foreign trusts that do business in China. This Recommendation doesot cover business trusts (which are not a trust, but a financial product of trust companies, which are a type of FI) and charitable trusts (see R.8 for these).

Criterion 25.1 Even thoughthe TrustLaw creates the civil trust, there are no further requirements that require the identification of the settlor when establishing a civil trust and acting as a trustee, register the names of the settlor and beneficiary (note that this lack of further requirements may also impede on the ability to use the civil trust in practice, which is a factortaken into account in IO.5).

Criterion 25.2 There are no requirements regarding accurate recordkeeping for domestic civil trusts and/or for foreign legal arrangements operating in China.

Criterion 25.3 There are no requirements requiring trustees of dorestic civil trusts and/or of foreign legal arrangements operating in China to disclose their status ten FI or DNFBP.

Criterion 25.4 There are no rules prohibiting trustees from disclosing their status. This is confirmed by cases provided by the authorites that showed foreign legal arrangements identified by banks as the beneficial owner.

Criterion 25.5 Law enforcement bodies and supervisors have the powers to obtain all of the information that FIs and other businesses hold, but there are no specifæglal obligations that spell out that the three categories of information that this criterion requires are indeed available for civil trusts and foreign legal arrangements.

Criterion 25.6 There are no specific legal obligations that require information of civil trusts and foreign legal arrangements to be available for exchange with foreign partners, except if the information is with a bank and indeed can be legally exchanged with foreign partners.

Criterion 25.7 \_and 25.8 There are no rules for trusteesof domestic civil trusts and/or of foreign legal arrangements operating in China regarding legal liability for failure to comply with obligations, and there are no sanctions available.

### Weighting and Conclusion

The Trust Lawcreates civiltrusts, but there is in general a lack of further requirements that could clarify the requirements of this Recommendation although some of the criteria can be met in practice if banks have the relevant information on civil trusts and/or foreign legal arrangements in their CDD files.

In the Third Round MER, China was rated partially compliant with the former R.23, as the AML legislation in place did not apply to the securities and insurance sectors, and there were no AML/CFT supervisory programs.

Criterion 26.1 The PBC has been designed by the State Council as the competent authority for AML/CFT supervision of all FIs acrossChina Sectoral prudential regulators support the PBC (in the banking and insurance sectors by the CBiRand in the securities sector by the CSRC. These twon poissions are required to assist the PBC in its AML/CFT supervisory role; participate in the formulation of equiations governing the financial institutions they supervise and required to impose an obligation on such financial institutions to establish andmprove an internal control system and perform other duties and functions as may be required by law (Arts. 9 and 36 of the AML Lawof the PRC (Order of the President No. 56). The PBC is solely responsible for AML/CFT supervision in the norbank financial sector, the Currency Exchange and the MVTS sectoraw of the PRC on the PBOrt. 32(9); AML Law Arts. 4 and 8; Provisions on AML Through Financial Institution Art. 3; Counter Terrorism Law, Art. 24). Payment institutions are not considered financiahistitutions in China, but have a designated AML supervisor, the PBC  $f^{TM}$  '  $\hat{}$  -  $\mathring{S}$  ‡ '• -Ї of China Art. 32; AML Law Arts. 8 and 34). The PBC is equally the designated supervisor for online lending institutions (Guiding Opinions of the Peter's Bank of China, the Ministry of Industry and Information Technology, the Ministry of Public Security, et al, on Promoting the Sound Development of Internet Finance (PBC Document No.[2015] 221)).

Criterion 26.2 In China, FIs are required to obtain premission from the competent financial authorities before conducting financial business. Requirements are as follows:

For Core Principles FIs: Bankshe Banking Supervision LawArts. 2 and 16the Law on Commercial Banks Arts. 11 and 12, and the Regulation of the PRC on the Administration of ForeignFunded Banks Art. 7; Securities Companies Becurities Law, Art. 122; Insurance companies Insurance LawArt. 67; Fund Companies Securities Investment Fund LawArt. 13 and Measures for the Admistration of Securities Investment Fund Management Companies to 2 and 14; Futures Companies: the Regulation on the Administration of Futures Trading Art. 15 and Measures for the Supervision and Administration of Futures Companies 6.

For other FI:Banking Supervision Law of the People's Republic of Charts. 2 and 16; Trust Companies:Measures for the Administration of Trust Companies. 7; Finance Companies: Measures for the Administration of Finance Companies of Enterprise Groups (2006 Amendment), Art. 6; Pilot Currency Brokerage Companies teasures for the Administration of Pilot Currency Brokerage Companies for the Administration of Pilot Currency Brokerage Companies for the Administration of Financial Asset Management Companies Regulation on Financial Asset Management Companies Companies Companies for the Administration of Financial Leasing Companies (2014), Art. 2; and Auto Finance Companies Administrative Measures for Auto Finance Companies (2014).

For payment institutions, including non-bank MVTS providers: Measures for the Administration of Payment Services of Normancial Institutions, Art. 3.

For currency exchange institutions: Administrative Measures for the Pilot Work of Franchised Individual Foreign Exchange Businesst, 5.

......

The CBIRC was formed on 8 April 2018 by the amalgamation of the former CBRC and the former China InsuranceRegulatory Commission (CIRC). However, in this chapter, references are to the former supervisors to be consistent with legal references.

market orders and haveno record of such violations for a minimum period of five years (Provisions on the Administration of the Qualifications for the Directors, Supervisors and Senior Executives of Insurance Compan@sder No.2 [2010] of the China Insurance Regulatory Commiss).

Fund companiesThe major shareholders of a fund company are required, inter alia, to have no violations of law in the last three years. Persons with criminal records for corruption, bribery, malfeasance, property encroachment, or disruption of the socialist market economy are prohibited from serving as a director, supervisor, senior manager, or employee. The scope of background checks is limited to a few number of years. (Securities Investment Fund LawArts. 13 and 15). For directors the scope of background chece •TM\*9ë¹ C7i\*CTMY•® TMZãTMR}Y-Æ [CTMRTY- "Ø@ «Á 9•åà •2, N°\$ùBù'DIÃTMT9•, U

that are applied to these Fls. Online lending institutions are not covered by PBC supervisory regulations, upon which the assessors place significant weight given its significance.

### Criterion 26.5

c.26.5a The PBC requires each regulated institution to carry out the assessment of ML risk itself, with the PBC subsequently applying classifications and ratings on all FIs annually (Measures for the Administration of the Money Laundering Risk Assessment of Incorporated Financial Institutions (for Trial Implementation) he assessment of classification and rating systems also factors in feedback and consultations with FIs; input on internal controls from sector financial regulators; reassessment by the PBC; and notification of reassessment results) and covers 20 criteria, including the improvement of AML policy and systems, mechanisms, technical support capability, personnel, customer identification, whenced measures for higher-risk customers and business, recordkeeping, largealue and STRs, and reputation risk, training, internal audit and management.

These measures appear to be in effect for an indeterminate period as the authorities stated that no timeline was specified for when the regulations will be finalized. No measures are applicable to the online lending sector.

c.26.5b The classification and rating system described under c.26.5(a) is generally consistent with the ML/TF risks present in China. The authorities noted that the PBC has conducted sector risk assessments and imposes more frequent supervisory and inspection visits on higher risk sectors. For example, the banking sector is rated as higher risk than the securities and insurance sectors generally. No measures are applicable to the online lending sector.

c.26.5c The risk classification and grading system considers the characteristics of financial institutions or groups (see c.26.5a). Financial institutions are required to provide sufficient supporting materials on the conclusions of selfassessment. The most significant financial institutions in China are supervised directly by PBC HO; this group includes the largest banking and insurance groups in China. No measures are applicable to the online lending sector.

Based on the foregoing, the PBC conducts AML/CFT onsite and offsite supervisory measures accordingly. Statistics submitted to the assessors confirmed that the frequency and intensity of supervisory measures on higherisk financial institutions is higher than those at lowerrisk institutions. (Measures for the Administration of Anti-Money Laundering Categorized Ratings of Incorporated Financial institutions (for Trial Implementation), Art. 12).

The principle shortcoming is that the measures are not applied in the online lending sector, upon which the assessors place significant weight given its significance.

Criterion 26.6 The PBC institutional (or group) AML/CFT assessment is conducted annually based on the process noted above when there are major AML/CFT risk events in the FIs or groups, their rating is reassessed, which can result in more frequent or intense scrutiny (Measures for the Administration of Antiloney Laundering Categorized Ratings of Incorporated Financial Institutes (for Trial Implementation), Chapter 1). Authorities stated that a similar approach is used in the payment institutions sector. No measures are applicable to the online lending sector.

# Weighting and Conclusion

The online lending sector issubject to limited obligations set out in (Guiding Opinions of the People's Bank of China, the Ministry of Industry and Information Technology, the Ministry of Public Security, et al, on Promoting the Sound Development of Internet Finance (PBC Document No. [2015] 12) but is not supervised for AML/CFT requirements. The assessors have given a significant weighting to this omission on the basis of the extent of the sector and the conclusion in the NRA which is that as AML control measures do not reduce the inherent sik, the residual vulnerability of the online lending sector is high. There are shortcomings in the market entry requirements mostly relating to the limited mandatory periods for criminal record searching.

Criterion 27.4 The PBC and the sectorial financial supervisors areuthorised to impose a range of sanctions on FIs and payment institutions for failure to comply with the AML/CFT requirements as set forth in R.35 including: warning, ordering to correct, fine, confiscation of illegal proceeds, ordering of suspension or revokingeth

qualification to hold a post, disciplinary sanction, prohibiting him/her from engaging in financial sectors, etc.

Relevant laws that grant the supervisors power to impose sanctings on FIs and payment institutions unless noted differently:

- x Law of the People's Republic of China on the People's Bank of Oknina 46;
- x AML Law Arts. 31 and 32;
- x Counter Terrorism LawArt. 83;
- x Banking Supervision LawArt. 37; covers banks;
- x Measures for the Administration of Payment Services of NelFinancial Institutions (Order of the People's Bank of China No. [2010] Art. 44; covers payment institutions;
- x Measures for the AntMoney Laundering Work in the Securities and Futures Sectors Art. 17; covers securities and futures entities;
- x Measures for the Administration of Antiloney Laundering Work in the InsuranceSector, Art. 36; covers insurance companies;
- x Administrative Measures for the Freezing of Assets Relating to Terrorist Activities, Art. 19; and
- x There are no measures covering online lending institutions.

# Weighting and Conclusion

Sanctions are not in line with the standards set out in R.35 (see TC Annex R.35).

# ta - ja aljan

In the Third Round MER, China wasted non-compliant with former R.24, mostly due to the fact that DNFBPs were not covered by AML/CFT obligations, and the penalty structure for trust companies was deficient.

Art. 35 of the AML Law provides that the specific measures for supervision and administration on DNFBPs shall be formulated by the PBC (the administrative department of AML of the State Council) in collaboration with the relevant departments of the State Council.

During the onsite visit the PBC purported to issullotice of the General Office of the ‡ ' 'Ž ‡ ï • f hina on Strengthening the AntiMoney Laundering Supervision Work on Designated NonFinancial Businesses and Professions, 2018 ich purported to enter into force on July 26, 2018. This Notice purported to designate the DNFBPs as follows:

- x : when they are involved in transactions for their clients concerning the buying and selling of real estate;
- x , including institutions providing a place to dealers for the sale of precious metals and precious stones: when they engage in or provide services for spot trading of precious metals and precious stones:
- x , when they prepare for or carry out transactions for their clients concerning the following activities: buying and selling of real estate; managing of client money, securities or other assets; management of bank or securities accounts; organisation obntributions for the creation, operation of companies; creation, operation or management of legal persons or arrangements, and buying and selling of business entities; and
- x , when they prepare for or carry out transactions for a client concerning the following activities: providing professional services for the creation, operation and management of a company; acting as (or arranging for another person to act as) a director of a company, a partner of a company, or act as a shareholdeof a company; providing a registered address, business address or correspondence address and so on.

The assessment of regulation and supervision requirements for trust companies is made under R.26 and R.27, since they affes in China andheir designated AML/CFT supervisor is the PBC, supported by the CBRC. However, in the context of the FATF standards, trust companies are DNFBPs (trust service providers) covered by AML/CFT obligations.

Notwithstanding the foregoing, for the reasons further stated underR.22, the assessors do not believe that the above designation was completed as required under the AML Law and accordinglyDNFBPs (except for DPMs and trust companies) are not subject to AML/CFT obligations.

Criterion 28.1 (Not applicable) It is prohibited to operate a casino in China. Gathering a crowd for gambling, making a living on gambling, or operating a casino constitute crimes (Criminal Law, Art. 303).

Criterion 28.2 Art. 35 of the AML Law provides that the specific measures for supervision and administration of DNFBPs shall be formulated by the PBC (the administrative department of AML of the State Council) in collaboration with the relevant departments of the State Council. Theurported designation referred to above does not specify which AML©FT measures will apply to DNFBPs and therefore it appears that all measures in the AML Law would apply to these DNFBPs if the designation was effective. However, the PBC has not implemented any measures for supervision and administration of DNFBPs exceptor trust companies and DPMs.

Criterion 28.3 The purported designation of the DNFBPs subject to th AML Law(as set out above) took place during the orisite visit, and thus there were no systems in place for monitoring the DNFBPs (apart from trust companies and DPMs) for compliance with AML/CFT requirements.

### Criterion 28.4

- x Art. 35 of the AML Lawprovides that the specific measures for supervision and administration of DNFBPs shall be formulated by the PBC (the administrative department of AML of the State Council) in collaboration with the elevant departments of the State Council (sector supervisors). However, as noted above the PBC has not properly of mulated such measures;
- x Insufficient information has been provided on how the authorities prevent criminals or their associates from being professionally accredited or holding ownership or a management interest in some DNFBP sectorss(defrom trust companies and DPMs); and
- x It is not clear which sanctions are available for the designated DNFBPs (aside from trust companies).

Criterion 28.5 As of the date of the onite visit there was no supervision in the DNFBP sector (aside from trust companies) by the PBC as the sector was only designated on July 26, 2018.

# Weighting and Conclusion

Only DPMs and trust companies are subject to any measures, applied by the sector SRO (DPMs) and the PBC (trust companies) respectively. The assessors havenged significant weighting to the many DNFBP sectors not covered by AML/CFT preventive measures, particularly the real estate sector.

In the Third Round MER, Chinwas rated largely compliant with these requirements (para. 187, 239). The main technical deficiency was that the FIU did not have (timely)

effectiveness of the FIU, which wasot assessed as part of technical compliance under the 2013 Methodology.

been significantly strengthened in this area by imposing new requirements which

to disseminate information upon request and request additional information from reporting entities.

Criterion 29.1 China established a deentralised FIU within the PBC RBC Law, Art. 4(10)) that consists of the following components, which function largely independently from each other and with limited systematic coordination between each other. The assessment team recognises that a country has the choice to implement a decentralised FIU approach and loes not question nor criticize the fact that China has chosen this approach. However, the assessment team has serious concerns regarding the implementation of this deentralised approach in China, which limits its ability to act as a national centre for recept and analysis of suspicious

<sup>80</sup> The AMLLaw

transaction reports and other information relevant to money laundering, associated predicate offences and terrorist financing; and for the dissemination of the results of that analysis.

- x CAMLMAC
- x AMLB; and
- x AML Units within each of the 36 provincial PBC branches (hereafter referred to as the PBC provincial branches).

CAMLMAC is established at the central level and has primarily responsibility for the receipt and analysis of ordinary STRs (i.e., transactions related to criminactivities such as ML, TF, and predicate offees STRs) and largevalue transaction reports (LVTRs). CAMLMAC also receives the information contained in all key STRs directly and simultaneously reported to the 36 provincial PBC branches (see allysis of R.20 and below). It reports the results of its analysis to central LEAs or other competent authorities or passes the information on to the AMLB or a PBC ovincial branch for an administrative investigation (AMLLaw<sup>81</sup> Arts. 8 and 10). CAMLMAC and the AMLB conduct joint analysis of complex cases identified and transferred to them by the PBC provincial branches.

While the AMLB is primarily a policydriven unit, it also has the power to conduct administrative investigations of STRs identified by CAMLMAC and takes dependent decisions in terms of dissemination to central or local LEAs and other competent authorities. In addition, the AMLB coordinates and steers administrative investigations with cross-regional aspects conducted by PBC provincial branches (AMLLaw, Arts. 8, 23 26). As mentioned above, the AMLB and CAMLMAC conduct joint analysis of complex cases.

The PBC provincial branches are the primary recipient of key STR\*sdentified by local financial institutions, and whistle-blower reports. In addition to the analysis/investigation of these types of reports, the provincial branches are also responsible for conducting administrative investigations based on suspicious activity

branches (AMLLaw, Arts.8, 23 26). They disseminate the results of their analysis and administrative investigations to local LEAs without direct access to information collected, analysed and disseminated by the other FIU components at central or local level, nor systematic coordination with any of these other FIU components. Each of the PBC branches registers the information collected during its analytical/investigative process and the subsequent disseminations in a stardione database, which is not accessive outside the PBC branch itself. The PBC provincial

<sup>&</sup>lt;sup>81</sup> Art. 2 of AMLLaw

refers to an act of adopting the relevant measures according to the provisions of the Law to prevent any money-laundering activity with the purpose of concealing or disguising the sources and nature of criminal proceeds generated from any concealing drugs crime, organizational crime of any gangland, terrorist crime, crime of smuggling, crime of corruption or bribery, crime of disrupting the financial management order, crime of financial raud, etc.Art. 36 specifically extends the scope of the AMLLaw

Key STRs are defined as follows: (i) The transaction is evidently suspected of ML, TF, or any other criminal activity. (ii) The transaction seriously compromises national security or affects social stability. (iii) Any other serious circumstance or emergency.

branches provide the details of these disseminations to CAMLMAC to ensure that the information disseminated is on record.

CAMLMAC thus centrally registers the details of all types of reports (STRs, RET/Rs, and LVTRs) received by both CAMLMAC itself and the 36 provincial branches, as well as the details on information disseminated by the three FIU components. However, provincial branches is limited to

transactions executed in their province but branches can obtain other information from CAMLMAC upon request.

### Criterion 29.2

C.29.2a CAMLMAC receives all STRs and the information in all key STRs, which FIs directly and simultaneously report to the PBC provincial branches (Measures for the Administration of Financial Institutions' Reporting of Large alue Transactions and Suspicious Transactions, rts. 11 and 17). CAMLMAC thusentralises the receipt of all types of reports. This is important because, as mentioned in c.29.1, each PBC provincial branch operates a stand-alone database, which is not accessible by CAMLMAC, the AMLB or any other PBC branch.

### C.29.2b CAMLMAC also receives:

x LVTRs, including largevalue cash transactions, large-value transfer transactions, and large-value crossborder transactions<sup>83</sup> (AMLLaw, Art. 10 and

reporting entities more broadly, then it has totransfer the case for an administrative investigation to the AMLB or one of the provincial branches.

The AMLB and the PBC provincial branches have the power to obtain all relevant information, documents and materials from any reporting entity when conducting an administrative investigation (AML Law Chapter IV, Arts. 23 26, and Notice of the People's Bank of China on Issuing the Detailed Rules for - Whothey Laundering Investigations Art. 6).

c.29.3b , The FIU components at all levelsave the power to access, either directly or upon request, a wide range of financial, administrative, and law enforcement information, as well as information from public sources (Art.11 of the AMLLaw).

### Criterion 29.4

c.29.4a CAMLMAC conducts perational analysis of STRsand LVTRs and based on requests received from LEAs Regulation on the Main Responsibilities, Internal Departments and Staffing of CAMLMACPBC Documer[2010] No.16). It also has full access to the information contained in key STRs directly and simultanessly reported to the PBC provincial branches to support its analysis of STRs and LVTRs. In addition, as set out in c.29.1 above, CAMLMAC also conducts operational analysis jointly with the AMLB of complex cases transferred by the PBC provincial branches reference to also qualify as FIUoperational analysis (AMLLaw, Art.8 and 10, and the Regulation on the Main Responsibilities, Internal Departments and Staffing of AMLB PBCDocument [2010] No.8, and similar documents for each individual PBC branch).

The PBC provincial branches keep the information collected in the course of their initial operational analysis/administrative investigation and the results of this analysis/investigation in a stand-alone database, which CAMLMAC, the AMLB or any other provincial branch cannot access. In addition, as mentioned above in c.29.1, the provincial branches have

database, namely to details of transactions executed in their province. Therefore, the three FIU components do not have access to all information available and obtainable by the FIU for use in operational analysis to follow the trail of particular activities or transactions, and to determine links between those targets and possible proceeds of crime, money bundering, predicate offences and terrorist financing, as required by c.29.4(a).

c.29.4b The three FIU components conduct strategic analysis to guide financial institutions in the identification of STRs and key STRs, and to provide policy guidance and steering to LEAs and other competent authorities. However, the same limitation as identified in c.29.4(a) with regard to the use of vailable and obtainable information applies to c.29.4(b).

Criterion 29.5 As mentioned above with regard to c.29.1, all the FIU components independently disseminate the results of their analysis/investigation to central or local LEAs, both spontaneously and upon request ML Law, Art.4 and 13). The CAMLMAÇ AMLB, and PBC provincial branches have established cooperation mechanisms with LEAs and other competent authorities as the basis for the dissemination of data. The CAMLMAC, AMLB and the PBC provincial branches disseminate the results of their analysis by using secure and protected channels.

...

Criterion 30.3

State Security Agencis, and Customs have powers to identify, trace, freeze, and seize suspected POC or property that is, or may become, subject to confiscation PL Arts. 100, 139, 142, 280; see also c.4.2 above).

Criterion 30.4 R.30 applies to all relevant authorities responsible for investigating predicate offences.

Criterion 30.5

refer ML aspects to the public security agencies for investigation.

## Weighting and Conclusion

- Rifill

> In the Third Round MER, China was ratedompliant with these requirements. The new R.31 was expanded and now requires countries to have, among other provisions, mechanismsfor determining, in a timely manner, whether natural or legal persons hold or manage accounts.

Criterion 31.1 LEAs and other competent authorities are authorised to use a wide range of powers when conducting investigations of ML, TF, and predicate offees. These powers include:

- x the production of records held by financial institutions, DNFBPs, and other natural, or legal persons CPLArt. 135);
- x the search of persons, articles, houses, and other premises where suspects or criminal evidence may be hidder(CPLArt. 134);
- x taking witness statements CPLArts. 52 and 122);and
- x the seizure and compulsory acquisition of articles and other materials relevant to the crimes CPLArts. 139, and 142; and Provisions of Public Security Agency (PPSA) handling produces of criminal cases

These powers can be exercised, subject to the LEAs obtaining a search warrant or other relevant authorisation. These powers can also be used together with freezing and confiscation actions. Likewise, the customs and tax authoris also have powers of inquiry, detention, freezing, search, and questioning when investigating cases under their jurisdiction (CustomsLaw, Arts. 2, 4, 6(5), and 61 (I)(ii); andLaw of the  $\ddagger$ ' — " $\check{Z}$  · … ' ^ Š · • f ' • - Š ‡  $\dagger$  • · • ; Art. '5f. The evidenges ±''އï• acquired (including any frozen funds or detained articles) can be used in any subsequent prosecution and enforcement procedures.

Criterion 31.2 LEAs are entitled to adopt special investigation techniques for which the legal basis is included in the CPL and the PPS Anandling procedures. Such techniques include:

x undercover (CPL, Art. 151 PPSAnandling operations and procedures, Art. 262);

""""""Cpvk/oqpg{"ncwpfgtkpi"cpf"eqwpvgt/vgttqtkuv"hkpcpekpi"ogcuwtgu"kp"Ejkpc"/"423;" Í "HCVH."CRI"cpf"GCI"423;"

'ŽŽ‡...-‹'•

- x monitoring, inspection, and verification of electronic communication devices (PPSAhandling procedures,Art. 255);
- x accessing computer systems (PPSA and ling procedures, Art. 112); and
- x controlled delivery and controlled payments CPL Art. 151, and PSA handling procedures Art. 263).

These powers can be used in the context of ML and TF investigations, subject to approval formalities to ensure that requirements for use of these techniques, as set out in Arts. 148152 of the CPL and Arts. 254 264 of the PPS Are respected. The evidence obtained can be used in court.

Criterion 31.3 LEAs have the power and several (online) mechanisms in place through which they are able to identify whether natural or legal persons hold or control accounts. They also have a process in place tœitify assets without prior notification to the owner. These powers are set out in the following legal documents: for Public Security AgenciesCPL,Art. 135 and PPSA handling procedureArts.231 CPLArt. 142 and Rules on Criminal Procedure

of the People's Procuratorate Arts. 141 and 142; for State Security Authorities: CPLArt.4; and for Customs: Customs LawArt.6(5) and Regulation on Customs Inspection, Arts. 10 and 14).

Criterion 31.4 As set out with regard to c.29.5 above, the three FIU components can cooperate with LEAs and provide them assistance with their investigations intML, predicate offences, and TF activities and disseminate upon request. (AMLLaw, Art.4, and Regulation on the Main Responsibilities, Internal Departments and Staffing of the CAMLMAC, AMLB, and local branches, PBC Documents and others, respectively

# Weighting and Conclusion

In the Third Round, China was rated partiallycompliant with these requirements (para. 271 299) because the reporting system in place exclusively focused on cash and BNI was not included. In addition, reports on cash declarations/seizures were not being provided to the FIU and were not being used to identify and target money launderers and terrorist financiers. The new Recommendation (R.32) contains new requirements regarding the declaration system and the safeguards in place to ensure the secured use of iformation collected.

Criterion 32.1 China implemented a declaration system for incoming and outgoing cross-border transportation of both national and foreign currency at all ports of entry to/departure from China, including airports, seaports, and rail ad road crossings (Announcement of the General Administration of Customs: Notice of Implementation of New Declaration Formalities for Passengers Entering and Leaving the Country at All Open PortsArt. III.5).

Travelers should declare to Customs althysical inward and outward transportations of national currency in cash above the prestibed threshold of RMB20 000 (USD2 935). While drafts, checks, and promissory notes should record formation

on the beneficiaries and a lack of such information results inthese negotiable instruments being invalid (Negotiable Instruments Law,Arts. 22,75,84, and 86), checks. The declaration China hasa prohibition on

Š (• f á f • †

For foreign currency any amounts over USB 000 (or any equivalent foreign currency) in cash carried into or out of China is subject to an application for Permit for Carrying Foreign Exchanges into and out of the country. Iaddition to carrying the corresponding certification document, travellers should also declare the transportation of the foreign currency to Customs. Notice of the State Administration of Foreign Exchange and the General Administration of Customs on Issuing the Interim Measures for the Administration of Carrying Foreign Currency Cash for Persons Entering or Exiting the Territory, and Interim Measures for the Administration of Carrying Foreign Currency Cash for Persons Entering or Exiting the Territary, 3). Transportation of foreign currency in cash through mail and cargo is also subject to prior authorisation (Decree 43 of the General Administration of Customs of the PŽ ‡ ï • Republic of China The relevant provisions are silent with regard to foreign BNI and the declaration obligation does therefore not extend to foreign BNI.

Chinese authorities provide that there is no BNI operation in the country and customs and financial institutions have not identified any BNI over the last three years.

compliance with each of the individual criteria below.

Criterion 32.2 China has a written declaration system in place for all travellers carrying national currency in cash aboveRMB20 000 (USD2 935) or foreign currency in cash aboveUSD5 000. The declaration obligation does not extend to

Criterion 32.3 China has not implemented a disclosure system for the purposes of R.32.

Criterion 32.4 Customs has the authority to request and to further information from the carrier with regard to the origin and the intended use of the cash upon discovery of a false declaration or a failure to declare national and foreignurrency in cash. Customs Law, Arts. 2, 6, and 12 and Regulation on the Implementation of Customs Administrative Punishmen Arts. 33, 34, 43).

Criterion 32.5 There exists a wide range of proportionate and dissuasive sanctions for making a false declaration or failing to declare. Almost all of the relevant sanctions include the ability to freeze, seize, and confiscate the cash involved.

A false declaration is a violation of the Customs Law, Art. 82(1) and of the Regulation on the Implementation of Customs Administrative Punishme Art. 7(2) and is subject to warnings, administrative fines or criminal penalties (Customs Law, Art. 82 and Regulation on the Implementation of Customs Administrative Punishm Ant., 9(2)). A fine applies to a false declaration or a failure to declare by a legal person or other entity. In addition, Customs can issue a warning to the person in charge or the directly

responsible personnel, but also has the power to sanction the indidual with a fine up to RMB50 000 (approx. USD7 338) (Regulation on the Implementation of Customs Administrative Punishment, Art. 32).

A case of failure to declare qualifies as [currency] smuggling. In such instances, the Customs has the power to confiscate the smuggled currency and proceeds from any illegal activities and charge a fine Customs Law Art. 82, and Regulation of the People's Republic of China on the Implementation of Customs Administrative Punishment, Art. 9 (2)). Moreover, in addition to a fine, criminal sanctions, including imprisonment, apply to individuals. (Interpretation of the Supreme People's Countd the Supreme People's Procuratorate on Several Issues concerning the Application of Law in the Trial of Criminal Cases of Smuggling. 2).

Other cases of failure to declare, but without the intention to smuggle currency in or out of the country, are subject to a warning, and a fine up to 200 of the amount concerned. Customs Law, Art. 85 86, and Regulation on the Implementation of Customs Administrative Punishmen (4).

Criterion 326 In 2017, authorities started working on setting up a system for Customs to notify CAMLMAC of information on crossorder transportation violation cases but the system is only in its very early implementation stages. While Customs periodically informs the FIU of excessive undeclared amounts of cash, the immation made available does not specifically focus on ML or TF suspicions.

Criterion 32.7 China makes use of both its Ant Money Laundering Coordination Mechanism and its AntiSmuggling Coordination Mechanism to coordinate on issues related to the implementation of R.32. Cooperation and coordination between Customs and public security agencies (e.gdepartments of immigration and emigration administration and departments of frontier inspection) coordinate and cooperate, in particular at border ports Customs Law Arts. 4 and 5; and Exit and Entry Administration Law, Art.6). However, as mentioned in c.32.6 above the information sharing mechanism with the FIU is only in its very early implementation stages.

Criterion 328 Customs have the power to inspect particular, suspicious, or random targets; check and examine crosborder vehicles, goods, and articles, and detain for up to 48 hours items, goods, and articles in violation of relevant laws and administrative regulations, including the regulations on the control of the cross border transportation of cash. Customs also have the power to seize undeclared cash or impose punishments on the identified illegal transportation of cash that exceeds the prescribed thresholds, as set out above with regard to 235 (Customs aw, Art. 6; and Regulation on the Implementation of Customs Administrative Punishment, 38).

Criterion 32.9 As mentioned above with regard to c.32.7, the information made available to the FIU only covers declaration violation cases of essive amounts, including false declarations, but does not specifically extend to suspicions of ML and TF. The FIU has the power to exchange this information with its foreign counterparts. The same information is also available for exchange with foreignustoms authorities based on MLA agreements, MOUs, and international conventions.

Criterion 32.10 China has strict safeguards in place to ensure proper use of the information collected through the declaration system General Provisions of the Civil Law of the PRCArt.111 and CFT Law Art.48). The crossborder declaration system

does not appear to restrict trade payments between countries nor the freedom of capital movements Customs LawArts. 71, 72 and 75).

Criterion 32.11 The wide range of sanctionsmentioned above in c.32.5, including seizure and confiscation, equally apply to persons who carry out a physical cross border transportation of currency that is related to ML and TF. In addition, in such cases, persons also qualify for criminal sentences of ML and TF, as set out in R.3 above.

## Weighting and Conclusion

The declaration requirement does not extend to BNI but this deficiency carries less weight because China prohibits most types of domestic BNI. The relevant information that the FIU receives from the customs authorities only covers declaration violation cases of excessive amounts and does not specifically extend to false declaration suspicions of ML and TF.

*t*a - *s* 

In its Third Round MER, China was rated tgely compliant with these requirements. The main technical deficiencies were that no statistics were kept concerning the number of cross-border transportations of currency and bearer negotiable instruments, and the timetaken to respond to extradition requests. In addition, there were no statistics available on the number of freezing, seizing or confiscation actions, or the amount of assets involved.

<u>FIU</u>

A

c.33.1a CAMLMAC centrally collects and maintains the statistics on the receipt of

branches and disseminations to LEAs, by all three FIU components, both spontaneously and upon request. CAMLMAC can produce these statistics in retaine using its IT system.

c.33.1b

ML/TF investigations, prosecutions, and convictions. The PBC keeps statistics on administrative investigations stemming from STRs.

relating to ML investigations, TF investigations, and ML/TF prosecutions and convictions respectively. China qualified statistics provided as samples as not all judgments are publicly available and therefore statistics provide were not comprehensive.

c.33.1c The Ministry of Public Security, the Ministry 6 State Security, the General

deposits however it is unclear whether comprehensive statics are kept on funds frozen. While China has issued appinion on Further Regulating the Disposition of

""

Technical compliance"

Property Related to Criminal Proceedingswhich indicates that investigative authorities should input relevant case related property information into a centrally managed system, this system is not yet fully functional.

## judgements.

All illegally gained property, regardless of the crime, is turned over to the State Treasury which is supervised by the Ministry of Finance. The Ministry of Finance is responsible for maintaining statistics on confiscations from the different authorities.

#### c.33.1d

statistics on extraditions and MLA requests sent and received. The Ministry of Public Security maintains statistics on cross border police to police cooperation, and the PBC maintains statistics related to financial intelligence sharing with foreign FIUs.

## Weighting and Conclusion

While statistics are largely kepton the four main areas covered by \$3, China was not always able to breakdown the statistics into meaningful subcomponents and at times needed to rely on samples.

In its Third Round MER, China was rated largelyompliant with these requirements. The main deficiency was that no guidance had be succeed in relation to what were, at the time, new obligations under the enacted AML Law (2006) and connected regulations.

Criterion 34.1

#### Supervisory Guidance

The PBC, CBRC, CSRC, and CIRC draweloped a series of published Guidelines and Notices to guide the FIs and payment institutions in performing AML/CFT work. The guidelines include:

x The PBC and the sector financial regulators instruct financial industry associations to establish guidance for their industry (

The PBC has pullished 33 Money Laundering Risk Warnington the end of 2017, and PBC branches also issued som Meloney Laundering Risk Warnington guiding the financial institutions to focus on high-risk areas of ML/TF.

financial regulators and FIs about the external threats of ML/TF and the key issues identified during supervision. The PBC shares with the CBRC, CSRC, and CIRC information about the AML supervision information of FIs, which promote the FIs to perform their duties in compliance with relevant laws and regulations.

For AML enquiries that are raised by the FIs, the PBC conducts research and issues professional interpretations.

No guidanceapplies to online lending institutions.

Trust companies are considered as FIs in China and are subject to guidance and feedback as described above. However, in the context of the FATF standards, trust companies are DNFBPs (trust service providers). Guidance specifically directed to the provision of trustee services does not appear to be issued. Little or no guidance was issued to other categories of DNFBPs.

#### FIU Guidance and Feedback

CAMLMACprovides reporting institutions with the various formats for the reporting of suspicious and large value transations. Art. 28 of Measures for the Administration of Financial Institutions' Reporting of Large/alue Transactions and Suspicious Transactionsprovides that if reports submitted by a FI are incomplete or erroneous, CAMLMAC may send a notice of supplementation and correction to the FI. According

system automatically and systematically reviews the completeness of the reports submitted. Such feedback involves an acknowledgement of ceipt and automatic verification of the completeness of LVTRs and STRs submitted by reporting institutions. In addition, CAMLMAC provides annual feedback on the quality of the STRs and LVTRs to reporting institutions. This comprises both written and face-face feedback.

## Weighting and Conclusion

DNFBPs (aside from trust companie and DPM) are not subject to the AML Lawand hence related guidance is not applicable.

#B - Sia

In its Third Round MER, China was rated partially compliant on the former R.17. The effectiveness of penalties provided in theAML Law for major deficiencies was relatively low. The penalty system focused excessively on minor deficiencies and was ineffective in dealing with structural weaknesses.

Criterion 35.1

Where an FI or a DNFBP fails to immediately freeze the funds or other assets of any designated terroristrganisation

or terrorist, the public security agency shall impose a fine of not less than RMB200 000 (approx. USD29 352), but not more than RMB500 000 (approx. USD73 380) on the institution, and impose a fine of not more than RMB100 000 (approx. USD14 676) on its directly responsible directors, senior executives, and other directly liable persons. If the circumstances are serious, these fines may be inceased to not less than RMB00 000 (approx. USD73 380) on the institution, and not less than RMB100 000 (approx. USD14 676) but not more than RMB500 000 (approx. USD73 380) on its directly responsible directors, senior executives, and other directly liable persons; may revoke its business license and order it to cease operations; and may detain such natural persons for not less than 5 days, but notmore than 15 days Counter Terrorism Law of the Peoples Republic of China, Order of the President No., 36rts. 83 and 93). Coverage of DNFBPs (apart from trust companies) only took effect on July 26, 2018 when such DNFBPs were designated under the AML Law by PBC.

If the circumstances are serious, the competent department can order the FI to cease doing business (Art. 93 of the Counter Terrorism Law). The FI may also be subject to sanctions imposed by the PBC (Art. 19 ofdministrative Measures for the F8 (m)unng epublic of

and record keeping; additional measures for specific customers and activities; reliance, controls and financial groups; reporting of suspicious transactions): When an FI fails to establish a prescribed internal control system of AML, or fails to establish an AML institution or an internal department on AML, or fails to conduct AML training for employees, it shall be liable to receive an order to correct the deficiency within a time limit. If the deficiency is serious the PBC may order the sectorial supervisor to apply a disciplinary sanction to the chairperson, senior management or any other person as well (Art.31 of AML Law). These penalties appear to apply to failures to comply with AML Law, Art. 15 (internal control systems and specialized AML unit), and 22 (training). For more ærious violations, the financial penalties noted above under Art. 32 of the AML Lawwill apply.

Where an FI fails to comply with the AML Lawin the following circumstances (i) performing CDD (Art. 16, 17, 18, 21); (ii) keeping records (Art. 19, 21); (iii) porting large-value or suspicious transactions (Art. 20, 21); (iv) dealing with a client without completing identify verification or establishing anonymous or pseudonymous accounts; (v) violating confidentiality provisions; (vi) retarding AML examinations or investigations; and (vii) refusing to provide investigations material or provides false material on purpose.; the PBC can order the institution to correct the breach. Where the breach is serious the institution can be fined RMB20 000 50 000 (approx. USD2 935 7 338, and anatural person can be fined RMB 0 000 50 000 (approx. USD1 467 7 338). Where the breach leads to ML, a fine of RMSD0 000 up to RMB5 million (approx. USD73 380 733 804 shall be imposed upon the FI and a fine of RMB50 000 up to RMB500 000 (approx. USD7 338 73 380) shall be imposed upon its directly liable director, senior management, or any other person. In the case of particularly serious circumstances, the PBC may advise the sectorial regulator to order the FI to suspend its business for rectification or to revoke its business license. However, given that the highest sanctions only apply when ML occurs, their availability is confined to limited circumstances, which affects their effectiveness.

As to the directly liable director, senior management, or any other person of an FI, the PBC may advise the relevant financial regulatory body to order the FI to give a disciplinary sanction thereto or revoke his/her qualification to hold a post and prohibit him/her from engaging in any financial work (Art. 32 of the AML Law).

Art. 49 of the Measures for the Administration of Antioney Laundering and Combatting the Financing of Terrorism for Payment Institutions PBC Document 2012 (54) provides that where payment institutions violate AML/CFT requirements, they can be sanctioned in accordance with the provisions of Arts. 31 and 32 of the Law.

As of the date of the onsite visit, the foregoing measures apply to designated DNFBPs (apart from trust companies) (Art.

Entities and individuals who are subject to the above penalties and who have

ita ita - ita

In its Third Round MER of 2007, China was rated partially compliant with requirements for former R.35 and SR.I. The main deficiencies were that criminalization of ML, the seizure/confiscation regime, and preventative measures were not fully in line with the Vienna, Palermo, and TF Convention here was also a deficiency of inadequate implementation of UNSCR 1267 and 1373but that is no longer assessed under this Recommendation.

Criterion 36.1 China is a party to all four conventions. China ratified the Vienna Convention October 25, 1989 the Palermo Convention September 23, 2003 the Merida Convention January 13, 2006, and Terrorist Financing Convention April 19, 2006.

Criterion 36.2 China has substantially implemented the Vienna, Palermo, Merida, and TF Conventions. There are some aspects that might impact timeplementation of the conventions: for example, equivalent value confiscation is reached through mandatory confiscation court ruling (see for more detail R.4), and selfaundering is not criminalised (see for more detail R.3). Not all of the terrorist acterferred to in the conventions and protocols listed in the Terrorist Financing Conventionare criminalis

and maritime sectors, protected persons, nuclear materials (see for medetail R.5). Some crimes are formulated too generally in the riminal Law, which might present difficulties in the prosecution process.

## Weighting and Conclusion

China has ratified and substantially implemented the international conventions required by R36, although not all offences set in these conventions are offences under the Chinese law.

祖 - 神

In its Third Round MER, China was rated compliant (R.36) and largely colimpt (SR.V) with these requirements. The main deficiency wapsartial coverage of the TF offence in Art. 120bis CL (sole collection of funds not criminalized) which constituted an impeding element when applying the dual criminality principle in relation to a foreign MLA request

Criterion 37.1 The Criminal Procedure LawAML Law, and other relevant laws of China set a legal basis for providing MLA (Art. 17 of the Criminal Procedure Law). China provides MLA, in AML/CFT investigations including, on the basis bilateral MLA treaties and international conventions that China is a party to, or under the principle of reciprocity (Art.17, CPL; Art. 29, AML Law, Art. 68, Counter Terrorism Law). China can provide a wide range of legal assistance to foreignuntries in investigations, prosecutions, and related proceedings involving ML or related predicate offences and TF although due to the complexity of the procedures it is not rapid as a rule.

Criterion 37.2 There are two principal channels of communication for MLA in China depending on what legal basis the MLA is to provided.

Under general circumstances, the MoJ of China is the central authority for international conventions and bilateral treaties on MLA. The MoJ will pass the requests on to the authority competent to take the requested actions according to Chinese laws. Besides, the MoJ is responsible for following up the implementation. Additionally, some treaties or ratification notes for conventions have designated the MPS (for example, forthe Palermo Convention) or the SPP (for example, forthe Merida Convention) as central authorities, which are in charge of receiving, investigating, transmitting, and coordinating criminal legal assistance cases.

Outside the context of a convention or an agreementhe MFA is the correspondent in China. It reviews the request, forwards it to the appropriate law enforcement authority, and channels the reply. The MLA is granted in such a case on the condition of a commitment of reciprocity to China.

The SPC, the SPPhe MPS, and the MFA have procedures for criminal legal assistance to ensure the timely handling of requests for criminal legal assistance (Interpretations of the Supreme People's Court on the Application of the Criminal ublic of China, Chapter 18; Rules of Criminal

Procedure of the People's Procuratorate, Chapter 16; Provisions on the Procedures for Handling Criminal Cases by Public Securitygencies Chapter 13).

There are specific provisions for the process related to the execution of foreign requests, but there are no requirements for prioritizing them. The MoJ, the SPP, the MPS, the MFA, and other authorities have internal case management systems to supervise the procedures of processing the cases involving legal assisce but not prioritization.

Criterion 37.3 In China the legal conditions for MLA are international treaties that have been concluded or acceded to to hina or the principle of reciprocity. Requests that do not conform to the provisions of the treaties or the relevant laws are not enforced by China. In addition, damaging the sovereignty, safety, and public interests of the country or violation of the Chinese laws are other reasons for rejection of MLA (CPL, Art. 17). The latter is in line with the principles and traditions of international mutual legal assistance.

Criterion 37.4 Based on the degal framework, China would not refuse a request for legal assistance due to (i) fiscal issues or (ii) confidentiality issues, except in cases covered under c.37.3.

Criterion 37.5 The Secrecy Lawf China stipulates that the secrets in diplomatic and foreign affairs, the secrets bearing the obligations of confidentiality and the secrets related to the criminal offences are state secrets protected by law. All stategencies, armed forces, political parties, publicorganisations, enterprises, and citizens have the duty to protect state secrets Secrecy LawArts. 3, 9). The Criminal Procedure Lawets that evidence involving any state secrets, commercial secrets, oersonal privacy shall be kept confidential (Art. 52).

Criterion 37.6 China uses dual criminality as a condition for providing MLA. (Criminal Law, Art. 7 9). In certain situations, China can negotiate with a foreign party

For example, the Treaty on Legal Assistance in Criminal Matters between China and Brazil sets that the party being requested may provide the assistance under a negotiated scope (not using requirement fodual criminality), regardless whether the action constitutes a crime under its domestic law.

Criterion 37.7 Dual criminality for the purposes of MLA shall be satisfied regardless of whether both countries place the offence within the same category of offence, or denominate the offence by the same terminology as long as both countries criminalize the conduct underlying the offence (treaties on MLA between China and other countries).

Criterion 37.8 Chinese competent authorities dealing with requests focriminal legal assistance can use the powers and investigative techniques consistent with the handling of domestic cases which are extensive depending on the nature of requested actions. These investigative powers and techniques can be used for regulaLAM requests, but also for requests directly from foreign judicial or law enforcement Interpretations of the Supreme People's Court on

 $-\check{S}\ddagger$  ''  $\check{Z}$  ' ... f – '' • ''  $\hat{Z}$  " ' ...  $\hat{Z}$  " ' ...  $\hat{Z}$   $\hat{Z}$  " ' ...  $\hat{Z}$  " " ...

See R.31 for an overview of the available investigative powered techniques for MLA.

## Weighting and Conclusion

China has a sound system and rules for mutual legal assistance. Despite the clear procedures for dealing with foreign requests, there are no requirements for prioritization of them. China relies on the indication by the requestingparty of the urgency of requests. There is no legal provision requiring that fiscal and confidentiality issues cannot be grounds for refusal. Although China insists on using dual criminality as a condition for providing mutual legal assistance it can, in

In its Third Round MER, China was rated largely compliant with these requirements. The main deficiency identified was the absence of formal legal basis for equivalent value confiscation as an obstacle to the execution of formal legal basis for equivalent value confiscation as an obstacle to the execution of formal MLA requests based on such orders. There have been changes to the Recommendation since the Third Round MER.

Criterion 38.1 Requests to take seizing or confiscation action must be based on a bilateral treaty or multilateral convention that has been concluded or signed by China, or on the principle of reciprocity. All types of property and instrumentalities are covered in China (Criminal LawArt. 64). As with other MLA issues, the MU has been designated as the competent authority to handle requests bed on multi- or bilateral

treaties (see c.37.2 above). Diplomatic channels must be used when no such treaty or convention exists.

Beyond the legal provisions and procedures that apply for any MLA requests (see R.37), there are no additional legal provisins or procedures to expedite foreign freezing, seizure, and confiscation requests.

There is no legal provision for executing equivalent value seizures and confiscation requests in China(see R.4 abov):

Criterion 38.2 There are no specific authority or procedures for providing MLA to requests made on the basis of foreign nononviction-based confiscation proceedings except in cases when the criminal suspect or defendant escapes and cannot be present in court after being wanted for a year (including being issing), or a criminal suspect or defendant dies. If his or her illegal proceeds and other property involved in the case are to be recovered in accordance the Criminal Law a People's Procuratorate may file an application to a People's Court for confiction of illegal proceeds. However, such application could not be triggered by an MLA request without a pro forma domestic investigation or procedures CPL, Arts.280 283; Provisions of the Supreme People's Court and the Supreme People's Procuratorate on Several Issues concerning the Application of the Confiscation Procedures for Illegal Proceeds in a Case Where a Criminal Suspect or Defendant Escapes, Hide), or Dies

Criterion 38.3 The arrangements for coordinating seizure and confiscation actions with other countries are those provisions that regulate all MLA (see R.37) and specific arrangements in bilateral agreements with other countries (e.gAgreement between the Government of the United States and the Government of China on Mutual Legal Assistane in Criminal Matters Arts. 14, 16).

The legal obligation for proper preservation of properties involved in criminal cases that are seized, frozen, and confiscated are contained in Art. 13C,PL mechanism for the management and disposal of capeoperties, which includes the system for retention of case properties and procedures for the management of properties in advance, to manage, when necessary, the frozen, seized, or confiscated property is set in Opinions on Further Regulating the Dispositi of Property Related to Criminal Proceedingsissued by the General Office of the CPC Central Committee and the General Office of the State Council Provisions on the Management of Property

\*\*\(^\*\)\tilde{Z}^+\tilde{T}\(^\*\)\tilde{V}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tilde{Z}^\*\(^\*\)\tild

Criterion 38.4 Where a criminal case is solved through international coperation, the Chinese government may hare with the cooperative countries the illegal gains, the proceeds thereof, the property used for the drugelated crimes or the money from selling such property (Narcotics Control Law Art. 57).

China and other countries can share confiscated properties under provisions of agreements. For example, in 2016, China and Canada signed Algreement between  $-\check{S}\ddagger$  ' $\ddot{}$ ' \*••‡•- ' $\ddot{}$ - $\check{S}$ ‡ † ' $\check{Z}$ ‡  $\ddot{}$ • ‡ ' $\ddot{}$ -  $\ddot{Z}$ 4 ... ' $\ddot{}$ -  $\check{S}$ 4 • †  $\ddot{}$ -  $\ddot{S}$ 5 Sharing and Return of Recovered AsseTs agreement stipulates that he illegally

# Weighting and Conclusion

The extradition regime of China is solid and wellorganised. The main deficiency i

Tax Collectior(Art. 91) stipulates that the Chinese government can conclude taxation treaties with foreign jurisdictions to engage in international cooperation.

C.40.2b Competent authorities are not prevented from using the most efficien means possible for providing assistance. Competent authorities have entered into numerous MOUs or bilateral and multilateral agreements with other foreign entities to facilitate cooperation. This information sharing agreements cover a broad range of foreign counterparts from numerous jurisdictions.

There are clear and secured information exchange channels for the transmission and reception of foreign requests during international copperation. The CAMLMAC has established its International Antioney Laundering Information Transmission System (CSW), which is dedicated to exchanging information with foreign FIUs. Art. 5 of the Processing Procedures of AML and Analysishtre provides that in addition to the CWS System, -mails, letters, and faxes on be used for international information exchange. As of April 2018, it signed MOUs or similar cooperative documents with FIUs of 50 countries. Other competent authorities also sign MOUs to facilitate the exchange of information. They conduct information exchange with overseas parties through various channels. Newonfidential intelligence can be delivered via Internet email; while confidential intelligence shall be exchanged through encrypted networks, encrypted faxes or special channels. The PBC has signed MOUs with a number of urisdictions including Russia, Argentina, and Macau China, to facilitate international cooperation, including the exchange of he Ministry of Public Security has established close cooperation information. relationships with 113 countries, established 129 bilateral and multilateral cooperation mechanisms and 96 liaison hotlines, sen 2 police liaison officers to 35 countries, and signed nearly 400 cooperation documents with the internal police department of more than 70 countries.

C.40.2d Clear standard procedures have been established for international co operation with foreign counterparts, but the processes for the timely prioritisation of the execution of requests have not been established. TReocedures for Processing of Foreign Intelligence Information Documents the CAMLMAC clarify the processing procedures for the exchange of intelligence with foreign counterparts by mentioning

State Administration of Taxation in its Rules for the International Exchange of Tax Information. In practice, the priority is decided at the beginning of dealing with requests. There is no information on other authorities.

C.40.2e Various competent authorities have processes and procedures for safeguarding information received from foreign counterparts. The legal documents have provisions on safeguarding the confidentiality of information received by them.

Criterion 40.3 The Chinese government can carry outsternational cooperation in AML, CFT, and related fields in accordance with international treaties concluded or acceded to, or in accordance with the principle of equality and reciprocity. Thus, while generally multilateral or bilateral agreements are wecome, they are not required conditions for competent authorities to carry out international cooperation (AML Law, Art. 27). CAMLMAC can only exchange information with counterpart FIUs based on a formal cooperation agreement, and it does not engage in the change of information exclusively based on confidentiality and reciprocity.

Competent authorities of China have negotiated with a wide range of foreign counterparts and signed cooperation agreements. For instance, the PBC has signed memoranda of cooperation with four jurisdictions (Argentina, Australia, Macau; China, and Russia). The CAMLMAC has signed MOUs on information exchange with 50 countries, the General Administration of Taxation has signed a number of international treaties on tax cooperation onbehalf of the Chinese government. The conclusion of agreements is done in a timely manner.

Criterion 40.4 In accordance with international custom, after requesting information and obtaining responses from foreign counterparts, some Chinese competent authorities will provide feedback on the use and usefulness of the information to the foreign counterparts.

The State Administration of Taxation expresses its gratitude to foreign counterparts for the information that has brought significant amount of tax for China indicating the amount of taxes.

Criterion 40.5 Chinese competent authorities exchange information or provide assistance in accordance with the laws or with the treaties, agreements, or according to the principles of equality and reciprocity (AML Law, Arts. 27, 28). There is no information suggesting that laws place unreasonable or unduly restrictive conditions, but they do not specifically allow international cooperation in the cases covered by c.40.5in the Methodology. The information received from the Global Network points to a number of international requests for information that have not been honoured without supporting feedback from the Chinese authorities. The authorities stated that the information request of a foreign authority will not be rejected because of the involvement of fiscal matters, issues of confidentiality, active inquiry or investigations (with reasonable exclusion of cases of possible impeding of investigations or prosecutions), or the status of the requiring authority.

Specfic provisions for such situations is mentioned only for The State Administration of Taxation: it shall not reject providing intelligence to foreign counterparts for the following reasons: the information request has nothing to do with tax benefits of China; the tax authorities have the obligation to keep the taxpayer information confidential; the bank has confidential obligation with the information of the depositor; the tax information is controlled by an agent, an intermediary, or other third parties etc. (Rules for the International Exchange of Tax InformatioArt. 10).

Criterion 40.6 The PBC, CAMLMAC, and tax authorities have controls and safeguards in place to ensure that information exchanged is only used for its intended purpose. The Ministry of Public Security, for example, includes such provision in its MOUs with LEA of other countries. When the CAMLMAC requests intelligence from foreign counterparts, it explicitly states the purpose of using the information. If the intelligence information provided by a foreign FIU is to be disclosed to the domestic LEAs, CAMLMAC requests the consent of the foreign counterpar\$ta(ndard Procedures for Processing of Foreign Intelligence Information Documents of the CAMLMACArts. 13, 14½aw on the Administrationof Tax Collection,Art. 54;Rules for the International Exchange of Tax InformationChapter 3).

Criterion 40.7 Competent authorities maintain and protect the confidentiality of information exchanged, consistent with the relevant applicable legal provious (Standard Procedures for Processing of Foreign Intelligence Information Documents of

the CAMLMAÇArts. 13, 14 Law on the Administration of Tax Collection Art. 54; Rules for the International Exchange of Tax Information Chapter 3) and the terms of 100 Us and 6ab 266 ((s)) 4 roof 4 () -ent 15198 (I) ent Adoho 5198 (I) b. 998 (o) y of o98 (a) 4.m. 002 (of peten. 998 (o) -9-

supervision with four jurisdictions, which enables China to exchange AML supervisory information with counterparts in other jurisdictions.

Criterion 40.14 For the AML/CFT purpose, the PBC can exchange domes**ti**cal available information specified in subcriteria 40.14 (a) to (c) including supervisory information on AML and financial regulation with foreign counterparts, regardless of whether they are supervising the same group of financial institutions (ML Law, Art. 27; Counter Terrorism Law, Art. 68). However, since there are deficiencies in collecting and maintaining BO information (see R24), and financial institutions are only required to take reasonable measures to identify BOs (see R.10), it is likely that PBC will not be always be able to share BO information with other supervisors.

Criterion 40.15 The PBC can carry out international AML/CFT cooperation, but the law describes in general its powers to cooperate and exchange relevant information, and is silent on the power, at the request of the foreign counterparts, to investigate AML/CFT information and provide feedback (AML Law, Arts. 27 28, CT Law, Art. 68). Based on the bilateral agreements or on the principle of reciprocity, Chinese regulators may authorise or facilitate the ability of foreign counterparts to conduct inquiries themselves in China.

Criterion 40.16 The PBC should explicitly state the purpose of information (e.g., for supervision only) when requesting supervisory information from foreign supervisors. If the information needs to be disclosed to other parties or used for other purposes, the PBC will obtain priorauthorisation from the information providers. In accordance with the terms of cooperation agreements (where in place), the prelimin ary consent to disclose information is required.

### Exchange of Informationbetween Law Enforcement Authorities

Criterion 40.17 The law enforcement authorities of China carry out international cooperation with foreign law enforcement authorities according to international treaties of China, or under the principle of equality and reciprocity, and exchange information on ML, relevant predicate offerces, and TF with foreign law enforcement authority, including the tracking and searching of criminal proceeds although the absence of provisions in law for confiscating property of corresponding value might present certain limitations to the cooperation (Counter Terrorism Law Art. 68; Provisions on the Procedures for Handling Criminal Cases by Public Security Cies, Art. 364).

Police Ceoperation. Public security authorities can cooperate with foreign police authorities to carry out police cooperation, including the exchange of criminal intelligence, investigation and evidence collection, service of criminal proedings documents, transfer of evidence, documentary evidence, audivisual materials or electronic data and other evidence, extradition, arrest and deportation of suspects, defendants, or criminals, as well as other criminal legal assistance and police cooperation stipulated in the international treaties and agreement (Provisions on the Procedures for Handling Criminal Cases by Public Security Process Art. 365).

Prosecution cooperationAs of September 2017, the Supreme People's Procuratorate has signed 146 co-operation agreements, MOUs, and other documents with 96 countries and regions. The content involves the cooperation in combating crimes, information exchange and personnel training etc.

Criterion 40.18 In police cooperation, the public security agrecies of China can use the same investigative powers, techniques, and coercive measures as investigating domestic cases, and upon the requests from foreign counterparts, can inquire and obtain information on behalf of foreign counterparts (Provisions on the Procedures for Handling Criminal Cases by Public Security (Provisions on the Procedures for Handling Criminal Cases by Public Security).

When the Chinese LEAs and internationabrganisations or foreign LEAs sign multilateral/bilateral cooperation agreements, parties agree on the use of information exchange. When a Chinese LEA requests information from a foreign counterpart, it will clearly indicate the purpose of using the information; if the information needs to be disclosed to other agencies or used for other purposes, prior authorisation will be sought from the requested party. For instance, the multilateral cooperation agreements signed by the Ministry of Public Security (such as through Interpol to inquire data, investigate and collect evidence) and bilateral police eo operation agreements also govern the strictions on the use of information exchange.

Criterion 40.19 On the basis of multilateral and bilateral agreements, China can cooperate with other countries to carry out law enforcement joint action. For instance, since 2011, according to a joint stateent of China, Laos, Burma, and Thailand, under the framework of the security cooperation mechanism among the four countries, the law enforcement agencies of China and the other three countries carry out the Mekong joint patrol enforcement to prevent, combia and investigate crimes in Mekong River basin.

#### Exchange of Informationbetween Non-Counterparts

Criterion 40.20 China allows domestic and foreign noncounterparts to exchange information indirectly under existing international cooperation mechanisms, but this is limited to agreements or MOUs concluded by China (for police cooperation Provisions on the Procedures for Handling Criminal Cases by Public Security cies, Art. 364, 367). For instance, foreign police trying to obtain information on financial supervision of China can make a request to the Ministry of Public Security which will transfer the request to the appropriate financial supervisor. The information from the financial supervisor will be provided through the Ministry of Public Security. Similarly, a foreign FIU can send a request to the CAMLMAC upon the request of their domestic police and transfer the information from the CAMLMAC to the police. The AML Law itself requires coordination among ministries and agencies in their AML work.

According to concluded international agreements and MOUs (for example, the MOU between the PBC and AUSTRAC), the Chinese authorities exchange information with foreign counterparts making it clear for what purpose and on whose behalf the request is made

### Weighting and Conclusion

Competent authorities are generally able to provide a wide range of direct and indirect international assistance, with only minor deficiencies (no prioritization process, feedback not used by the FIU).

x There is currently no effective oversight or monitoring to ensuthat DNFBPs are implementing their obligations under R.1.
x DNFBPs have not been designated under the AML Law therefore are not subject to AML/CFT risk assessm obligations.
x Payment institutions are not subject to a general requirement have policies, controls and procedures approved by se management to enable them to manage and mitigate identifi risks.
x The Recommendation is fully met
x Arts. 191 and 312 of the PC criminalising ML do not co
x China follows the attrimes approach under Art. 312 of the P however provinces and autonomous regions can also place value range to determie if the behaviour is criminal.
x Some of the predicate offences under Art.312 of the PC are narrow.
<ul><li>x Selflaundering is not criminalised in China.</li><li>x Prison sanctions are proportionate compared to other finance</li></ul>
crimes, but low compared to the penalties for somethe main predicate offences that the thirmparty ML criminalisation aims to deter.
x Legal entities are not criminally liable and it is unclear if sancti for legal persons are proportionate and dissuasive.
x The Recommendation is fully met
x The wording of the TF offence in Art. 120A of the PC is general and lacks the level of detail of the TF Convention, w makes it somewhat difficult to assess the requirements.
x Not all required conduct listed in three Conventions Annexed the TF Conventions has been criminalised as terrorist condu
x With respect to the terrorist related offences mentioned in the Annex of the TF convention there are three conventions when not all conduct, has been criminalised as terrorist conduct.
x Art. 120A of the PC seems to cover only direct assistance and the wilful collection of funds.

- x There are no legal provisions or mechanisms that ensure authorities operate against entities designated by th UNS® or against entities to be proposed to the UN, or agai entities designated upon a foreign request or a domes proposal.
- x The freezing requirements in the Counter Terrorism Law an Notice 187/2017, are incomplete in scope and only apply to and designated DNFBPs.

	hu ar actively averaging to average their ar towards
	by, or actively supporting, terrorist taxity, or terrorist organisations.
Х	The Recommendation is fully met
X	Payment institutions are not required to undertake CI measures when carrying out occasional transactions in sev operations that appear to be linked for a total exceeding t equivalent of USD/EUR 15 000.
х	Payment institutions are not required to verify that any pers purporting to act on behalf of the customer is so authorised a identify and verify the identity of that person.
х	FIs are not explicitly required to identify the natural person w ultimately owns a customer that is a legal person or a le arrangement.
X	There is no explicit requirement for payment institutions ensure that documents, data, or information collected under t CDD process is kept -top-date and relevant.
x	For customers that me legal persons or legal arrangements, t
	business and its ownership and control structure to requirement seems to be unduly limited to taking reasonal measures.
х	There is no requirement to <b>dect</b> information on the place of business of legal arrangements.
х	For life and other investmentelated insurance policies where beneficiary is designated by characteristics or by class or by cmeans, insurance institutions are not required to obta sufficient information on the beneficiary to be able to establi the identity at the time of the payout. Measures of verification of the identity of the beneficiary are subject to thresholds a limited to specific types of payments.
х	FIs are not require to take enhanced measures, beyor enhanced customeidentification measures, if they determin that a beneficiary who is a legal person or a legal arrangen presents a higher risk.
х	It is unclear whether the requirements governing the situati where bw-risk customers are allowed to utilise the busine relationship prior to verification are mandatory.
х	The requirement to supplement or update CDD information existing customers is not based on materiality, nor should done at appropriate times.
X	Theimplementation of CDD for existing relationships of payminstitutions is not required on the basis of materiality and risk, at appropriate times.
х	It is not clear whether the requirement to apply enhance measures in situations where ML/TF risks aright are mandatory.
х	The Recommendation is fully met
х	There are no requirements for the use of risk managem systems to determine whether a beneficial owner is a PEP.
х	It is not mandatory for FIs totake reasonable measures the establish the source of wealth of PEPs or conduct ongo monitoring of business relationships with foreign PEPs.

Χ	Payment institutions are not explicitly required to have
	ongoing training program and an independent audit function.
Χ	Payment institutions are not required to appoint a complian

- officer at the management level and apply screening procedu to ensurehigh standards when hiring employees.
- x Financial institutions are not explicitly required to impleme group-wide programs against ML/TF, including growingle screening procedures when hiring employees and an ong employee training programme.
- x Payment institutions are not required to implement grouppide programs against ML/TF.
- x If the host country does not permit the proper implementation

financial groups are not explicitly required to apalypropriate additional measures to manage the ML/TF risks.

x The Recommendation is fully met

# Fourth Round Mutual Evaluation Report

..a .- a| . ´.

In this report: a summary of the anti-money laundering (AML) / counter-terrorist financing (CTF) measures in place in the People's Republic of China (China) as at the time of the on-site visit from 9 to 27 July 2018.

The report analyses the level of effectiveness of China's AML/CTF system, the level of compliance with the FATF 40 Recommendations and provides recommendations on how their AML/CFT system could be strengthened.
